Subject: Option #1

Customer Name : Gary Drucker

Customer Email Address : █████████████████

Message : I am writing to support the Option #1 for Regional Housing Determination, which, as I understand it, involves (a) actual current needs for housing at every income level, with a 70% weighting of households, a 20% weighting of transit and a 10% weighting for lack of building permitting and activity, with a 110% social equity adjustment factor for the three lower income levels on existing need PLUS (b) projected housing needs at every income level with a 150% social equity adjustment factor for all income levels on projected needs, in each case taking local input and data as a component of the formula.
