SPECIAL MEETING

REGIONAL HOUSING NEEDS ASSESSMENT (RHNA) APPEALS BOARD

Remote Participation Only

Tuesday, February 16, 2021

1:00 p.m. – 3:00 p.m.

To Participate on Your Computer:

<https://scag.zoom.us/j/91702781766>

To Participate by Phone:

Call-in Number: 1-669-900-6833

Meeting ID: 917 0278 1766

***Please see next page for detailed
instructions on how to participate in the meeting.***

PUBLIC ADVISORY

Given recent public health directives limiting public gatherings due to the threat of COVID-19 and in compliance with the Governor's recent Executive Order N-29-20, the meeting will be held telephonically and electronically.

If members of the public wish to review the attachments or have any questions on any of the agenda items related to RHNA, please send an email to housing@scag.ca.gov. Agendas and Minutes are also available at: www.scag.ca.gov/committees.

SCAG, in accordance with the Americans with Disabilities Act (ADA), will accommodate persons who require a modification of accommodation in order to participate in this meeting. SCAG is also committed to helping people with limited proficiency in the English language access the agency's essential public information and services. You can request such assistance by calling (213) 236-1959. We request at least 72 hours (three days) notice to provide reasonable accommodations and will make every effort to arrange for assistance as soon as possible.

Instructions for Public Comments

You may submit public comments in two (2) ways:

1. Submit written comments via email to: housing@scag.ca.gov by 5pm on Friday, February 12, 2021.

All written comments received after 5pm on Friday, February 12, 2021 will be announced and included as part of the official record of the meeting.

2. If participating via Zoom or phone, during the Public Comment Period, use the “raise hand” function on your computer or *9 by phone and wait for SCAG staff to announce your name/phone number. SCAG staff will unmute your line when it is your turn to speak. Limit oral comments to 3 minutes, or as otherwise directed by the presiding officer.

If unable to connect by Zoom or phone and you wish to make a comment, you may submit written comments via email to: housing@scag.ca.gov.

In accordance with SCAG’s Regional Council Policy, Article VI, Section H and California Government Code Section 54957.9, if a SCAG meeting is “willfully interrupted” and the “orderly conduct of the meeting” becomes unfeasible, the presiding officer or the Chair of the legislative body may order the removal of the individuals who are disrupting the meeting.

Instructions for Participating in the Meeting

SCAG is providing multiple options to view or participate in the meeting:

To Participate and Provide Verbal Comments on Your Computer

1. Click the following link: <https://scag.zoom.us/j/91702781766>
2. If Zoom is not already installed on your computer, click “Download & Run Zoom” on the launch page and press “Run” when prompted by your browser. If Zoom has previously been installed on your computer, please allow a few moments for the application to launch automatically.
3. Select “Join Audio via Computer.”
4. The virtual conference room will open. If you receive a message reading, “Please wait for the host to start this meeting,” simply remain in the room until the meeting begins.
5. During the Public Comment Period, use the “raise hand” function located in the participants’ window and wait for SCAG staff to announce your name. SCAG staff will unmute your line when it is your turn to speak. Limit oral comments to 3 minutes, or as otherwise directed by the presiding officer.

To Listen and Provide Verbal Comments by Phone

1. Call **(669) 900-6833** to access the conference room. Given high call volumes recently experienced by Zoom, please continue dialing until you connect successfully.
2. Enter the **Meeting ID: 917 0278 1766**, followed by #.
3. Indicate that you are a participant by pressing # to continue.
4. You will hear audio of the meeting in progress. Remain on the line if the meeting has not yet started.
5. During the Public Comment Period, press *9 to add yourself to the queue and wait for SCAG staff to announce your name/phone number. SCAG staff will unmute your line when it is your turn to speak. Limit oral comments to 3 minutes, or as otherwise directed by the presiding officer.

Alternate: Hon. Mike Judge, Simi Valley, VCTC

REGIONAL HOUSING NEEDS ASSESSMENT (RHNA) APPEALS BOARD SPECIAL MEETING AGENDA

Southern California Association of Governments
Remote Participation Only
Tuesday, February 16, 2021
1:00 PM – 3:00 PM

The RHNA Appeals Board can consider and act upon any of the items listed on the agenda regardless of whether they are listed as information or action items.

CALL TO ORDER AND PLEDGE OF ALLEGIANCE *(The Honorable Peggy Huang, Chair)*

PUBLIC COMMENT PERIOD

Members of the public are encouraged to submit written comments by sending an email to: housing@scag.ca.gov by 5pm on Friday, February 12, 2021. Such comments will be transmitted to members of the legislative body and posted on SCAG's website prior to the meeting. Written comments received after 5pm on Friday, February 12, 2021 will be announced and included as part of the official record of the meeting. Members of the public wishing to verbally address the RHNA Appeals Board will be allowed up to 3 minutes to speak, with the presiding officer retaining discretion to adjust time limits as necessary to ensure efficient and orderly conduct of the meeting. The presiding officer has the discretion to reduce the time limit based upon the number of comments received and may limit the total time for all public comments to twenty (20) minutes.

Click [here](#) to access the list of written Public Comments received as of 2/9/2021, or see the attachment.

All comments submitted are posted online at <https://scag.ca.gov/rhna-comments>.

10. Proposed Final 6th Cycle RHNA Allocation Plan
(Ma'Ayn Johnson, Housing Program Manager)

RECOMMENDED ACTION:

Review and recommend that the Community, Economic and Human Development (CEHD) Committee recommend that the Regional Council adopt the Final RHNA Allocation Plan as part of a public hearing to take place on March 4, 2021.

11. Report on RHNA Process and Consideration of Resolution
(Kome Ajise, Executive Director)

RECOMMENDED ACTION:

Review and recommend to the Community, Economic and Human Development (CEHD) Committee for further recommendation of adoption by the Regional Council a resolution to direct SCAG to:

1. Continue supporting local jurisdictions with their Housing Element development through Regional Early Action Planning (REAP) grant programs;
 2. Engage with the California Department of Housing and Community Development (HCD) to ensure clear understanding of challenges faced by local jurisdictions and that all development opportunities are fully considered;
-

3. Encourage HCD to pursue activities as part of a reform committee established under Assembly Bill (AB) 101 including and holding hearings in the SCAG region and inviting participation and input from stakeholders, particularly local jurisdictions which filed appeals; and
4. Work with the State Legislature to pursue legislative changes to State housing law to allow for more flexibility for housing element development and implementation.

CHAIR'S RERORT

(The Honorable Peggy Huang, Chair)

REGIONAL HOUSING NEEDS ASSESSMENT (RHNA) APPEALS BOARD
MINUTES OF THE MEETING
WEDNESDAY, JANUARY 6, 2021

THE FOLLOWING MINUTES ARE A SUMMARY OF ACTIONS TAKEN BY THE RHNA APPEALS BOARD. A DIGITAL RECORDING OF THE ACTUAL MEETING IS AVAILABLE AT: <http://scag.iqm2.com/Citizens/>.

The RHNA Appeals Board of the Southern California Association of Governments (SCAG) held its meeting telephonically and electronically, given public health directives limiting public gatherings due to the threat of COVID-19 and in compliance with the Governor's Executive Order N-29-20. A quorum was present.

Present

Representing Imperial County

Hon. Cheryl Viegas-Walker, El Centro, District 1 (Primary)
Sup. Luis Plancarte, Imperial County (Alternate)

Representing Los Angeles County

Hon. Margaret Finlay, Duarte, District 35 (Primary)

Representing Orange County

Hon. Peggy Huang, Yorba Linda, TCA (Alternate): **Chair**

Representing Riverside County

Hon. Russell Betts, Desert Hot Springs, Pres. Appt. (Primary)
Hon. Rey Santos, Beaumont, District 3 (Alternate)

Representing San Bernardino County

Hon. Deborah Robertson, Rialto, District 8 (Primary)

Representing Ventura County

Sup. Carmen Ramirez, Ventura County (Primary)

Members Not Present

Hon. Rex Richardson, Long Beach, District 29 (Alternate)
Hon. Wendy Bucknum, Mission Viejo, District 13 (Primary)

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Hon. Larry McCallon, Highland, District 7 (Alternate)
Hon. Mike T. Judge, Simi Valley, VCTC (Alternate)

CALL TO ORDER AND PLEDGE OF ALLEGIANCE

Chair Huang called the meeting to order at 9:00 a.m.

PUBLIC COMMENT PERIOD

Chair Huang opened the Public Comment Period and outlined instructions for public comments.

Written comments received after the agenda was posted and before the 5pm deadline the day before the hearing were read into the public comment record. Written comments read into the record were received from members of the public, Henry Fung who commented on RHNA Litigation Committee on January 4, 2021, Nate Farnsworth representing City of Yorba Linda regarding a public comment on filed appeal for Fontana, Pico Rivera, San Dimas and Yorba Linda on January 5, 2021 and Joann Lombardo representing City of Chino Hills regarding public comment on filed appeal for Chino Hills on January 5, 2021. Verbal comments were provided by the following:

1. Richard Walker and Alexis Mondares, Public law Center, Orange County regarding an appeal filed by the City of Huntington Beach
2. Jessica Serrano, City of Norwalk, in regard to conducting a special closed session to discuss RHNA Litigation committees' recommendations.
3. Stacy Morales, City of Norwalk, in regard to conducting a special closed session to discuss RHNA Litigation committees' recommendations.
4. Nate Farnsworth, City of Yorba Linda, in regard to RHNA and Connect SoCal consistency.
5. Fred Galante, City of Chino, in regard to RHNA and Connect SoCal consistency.

Seeing no further comments, Chair Huang closed the Public Comment Period.

ACTION ITEM/s

1. Public Hearings to Consider Appeals Submitted by Jurisdictions Related to the 6th Cycle Draft RHNA Allocations

Executive Director Kome Ajise provided some remarks about the RHNA Appeals process.

1.1. City of Barstow

the SCAG staff presentation. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Finlay) to deny the appeal filed by the City of Barstow (the City) to reduce its Draft RHNA Allocation by 635 housing units, from 1,516 units to 881 units. Motion was SECONDED (Ramirez). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, HUANG, RAMIREZ, ROBERTSON, VIEGAS-WALKER (6)

NOES: NONE (0)

ABSTAIN: NONE (0)

1.2. City of Chino

Mr. Nick Laguori provided a presentation on behalf of the City of Chino. Michael Gainor provided the SCAG staff presentation. Mr. Fred Galante and Nick Laguori provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Viegas-Walker) to deny the appeal filed by the City of Chino (the City) to reduce its draft RHNA allocation from its current allocation of 6,961 units to 3,397 units, a reduction of 3,564 units (51.2 percent). Motion was SECONDED (Betts). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, RAMIREZ, VIEGAS-WALKER (4)

NOES: HUANG (1)

ABSTAIN: ROBERTSON (1)

1.3. City of Chino Hills

Joann Lombardo provided a presentation on behalf of the City of Chino Hills. Kevin Kane provided the SCAG staff presentation. Joann Lombardo provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Finlay) to deny the appeal filed by the City of Chino Hills (the City) to reduce the Draft RHNA Allocation for the City by 1,797 units. Motion was SECONDED (Viegas-Walker). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, RAMIREZ, VIEGAS-WALKER (4)

NOES: HUANG (1)

ABSTAIN: ROBERTSON (1)

1.4. City of Fontana

DiTanyon Johnson provided a presentation on behalf of the City of Fontana. Roland OK provided the SCAG staff presentation. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Viegas-Walker) to deny the appeal filed by the City of Fontana (the City) to reduce its draft RHNA allocation by 10,563 units. Motion was SECONDED (Betts). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, HUANG, RAMIREZ, VIEGAS-WALKER (5)

NOES: NONE (0)

ABSTAIN: ROBERTSON (1)

The RHNA Appeals Board recessed the meeting for a break at 12:20 p.m. and reconvened the meeting at 12:46 p.m.

1.5. City of Hemet

Monique Alaniz-Fletjer and HP Kang provided a presentation on behalf of City of Hemet. Karen Calderon provided the SCAG staff presentation. Monique Alaniz-Fletjer and HP Kang provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Betts) to deny the appeal filed by the City of Hemet (the City) to reduce the draft RHNA allocation for the City by 2,824 units. Motion was SECONDED (Viegas-Walker). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, HUANG, RAMIREZ, ROBERTSON, VIEGAS-WALKER (6)

NOES: NONE (0)

ABSTAIN: NONE (0)

1.6. County of Riverside

Robert Flores and Juan Perez provided a presentation on behalf of County of Riverside. Ma'Ayn Johnson provided the SCAG staff presentation. Robert Flores and Juan Perez provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (Finlay) to partially approve the appeal filed by the County of Riverside to reduce the draft RHNA allocation for the County of Riverside (unincorporated areas) by 215 units, for a total draft RHNA allocation of 40,553 units. Motion was SECONDED (Ramirez). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, HUANG, RAMIREZ, ROBERTSON, VIEGAS-WALKER (6)

NOES: NONE (0)

ABSTAIN: NONE (0)

1.7. City of Calipatria

The City of Calipatria withdrew its appeal.

ADJOURNMENT

There being no further business, Chair Huang adjourned the RHNA Appeals Board meeting at 2:15 p.m.

CALL TO ORDER AND PLEDGE OF ALLEGIANCE

Vice Chair Margaret Finlay called the meeting to order at 9:05 a.m. Vice Chair Finlay asked Board Member Russell Betts, Desert Hot Springs, to lead the Pledge of Allegiance.

PUBLIC COMMENT PERIOD

Vice Chair Finlay opened the Public Comment Period and outlined instructions for public comments.

Written comments received after the agenda was posted and before the 5pm deadline the day before the hearing were read into the public comment record from City of Pico Rivera by Luis Rodriguez Jr. regarding Comment from Jurisdiction on filed appeal: Pico Rivera on January 11, 2021; by Denelle Voegtly regarding Public comment on filed appeal: Yorba Linda on January 12, 2021; by Arivinder Mann regarding Public comment on filed appeal: Yorba Linda on January 12, 2021; from Hollywood Riviera Homeowners Association by Amy Josefek regarding Public comment on filed appeal: Torrance on January 13, 2021; from City of Newport Beach by Brad Avery regarding Response to comment from Public Law Center (12/10/20) on January 13, 2021; by Chris Dreike on RHNA Methodology on January 13, 2021; by Russell Khouri regarding Public comment on filed appeal: Rancho Santa Margarita on January 13, 2021; by Don Bernstein regarding Public comment on filed appeal: Yorba Linda on January 14, 2021; by Rhonda Lundberg regarding Public comment on filed appeal: Rancho Santa Margarita on January 14, 2021; from Orange County Business Council by Jennifer Ward regarding Public comment on filed appeals: Orange County Cities on January 14, 2021; from City of Yorba Linda by Todd O. Litfin regarding Comment from Jurisdiction on filed appeal: Yorba Linda on January 14, 2021; and lastly from City of Irvine by Pete Carmichael regarding Comment from Jurisdiction on filed appeal: City of Irvine on January 14, 2021. Verbal comments were provided by the following:

1. Holly Osborne, Redondo Beach, regarding Dataset used by SCAG for RHNA process
2. Alexis Mondares, Public Law Center to thank staff for their work
3. Jaime Murillo, City of Newport Beach regarding RHNA 5th cycle and 6th cycle allocations.

Seeing no further comments, Vice Chair Finlay closed the Public Comment Period.

REVIEW AND PRIORITIZE AGENDA ITEMS

Vice Chair Finlay prioritized the agenda as below:

- 1.1 (City of Santa Ana)
 - a. Garden Grove Appeal
 - b. Irvine Appeal
 - c. Newport Beach Appeal
 - d. Yorba Linda Appeal
- 1.5 (City of Yorba Linda)
- 1.2 (City of Irvine)
- 1.3 (City of Newport Beach)
- 1.4 (City of Garden Grove)

ACTION ITEM/s

- 1. Public Hearings to Consider Appeals Submitted by Jurisdictions Related to the 6th Cycle Draft RHNA Allocations

- 1.1. City of Santa Ana

- a. City of Garden Grove

- Lisa Kim provided a presentation on behalf of the City of Garden Grove and requested an increase of Santa Ana's draft allocation of 3,087 units to 10,174 units.

- b. City of Irvine

- Bill Ihrke provided a presentation on behalf of the City of Irvine and requested respectfully that the City of Santa Ana RHNA allocation be increased by 10,000 units to a total of **13,087 units** to be consistent with the updated major residential development information publicly accessible on their website.

- c. City of Newport Beach

- Jaime Murillo provided a presentation on behalf of the City of Newport Beach and requested respectfully that the City of Santa Ana RHNA allocation be increased to be consistent with the updated major residential development information publicly accessible on their website.

- d. City of Yorba Linda

- Nate Farnsworth provided a presentation on behalf of the City of Yorba Linda and requested based on Santa Ana's updated 2045 household growth projections of 36,261, the RHNA calculator should be recalculated based on this updated data. It is assumed that this would result in Santa Ana's RHNA be increased to 26,141.

Kristine Ridge provided a presentation on behalf of the City of Santa Ana in response to the appeals filed on the jurisdiction.

Kevin Kane provided the SCAG staff presentation. City staff from the five cities each provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

A MOTION was made (McCallon) to deny the appeals filed by:

1. The City of Garden Grove to increase the Draft RHNA Allocation for the City of Santa Ana based on the application of the Final RHNA Methodology for the 6th cycle (requested increase of 7,087 units),
2. The City of Irvine to increase the Draft RHNA Allocation for the City of Santa Ana based on the application of the Final RHNA Methodology for the 6th cycle and the availability of land suitable for urban development or conversion to residential use (requested increase of 10,000 units),
3. The City of Newport Beach to increase the Draft RHNA Allocation for the City of Santa Ana based on the application of the Final RHNA Methodology for the 6th cycle and the availability of land suitable for urban development or conversion to residential use (requested increase of 7,087 units), and
4. The City of Yorba Linda to increase the Draft RHNA Allocation for the City of Santa Ana based on the application of the Final RHNA Methodology for the 6th cycle (requested increase of 23,167 units).

Motion was SECONDED (Ramirez). The motion passed by the following roll call votes:

AYES: BETTS, FINLAY, MCCALLON, PLANCARTE, RAMIREZ (5)

NOES: NONE (0)

ABSTAIN: BUCKNUM (1)

1.5. City of Yorba Linda

Nate Farnsworth provided a presentation on behalf of the City of Yorba Linda. Kevin Kane provided the SCAG staff presentation. City staff provided a brief rebuttal. The RHNA Appeals Board asked follow up questions and discussed the submitted appeal and presentations.

[MINUTES ARE UNOFFICIAL UNTIL APPROVED BY THE RHNA APPEALS BOARD]

//

**AGENDA ITEM 9
REPORT**

Southern California Association of Governments
Remote Participation Only
February 16, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

**EXECUTIVE DIRECTOR'S
APPROVAL**

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Final Determination of Appeals Decisions

RECOMMENDED ACTION:

Consider and ratify the written determinations for the appeals submitted by the jurisdictions related to the Draft RHNA Allocation Plan, which appeals were heard and decided, at the close of public hearings, by the RHNA Appeals Board on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

EXECUTIVE SUMMARY:

Attached are the written determinations prepared by Special Counsel Patricia Chen regarding the forty-seven (47) appeal hearing proceedings that took place on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. The RHNA Appeals Board should review the written determinations and upon ratification by the RHNA Appeals Board, these determinations shall serve as the final determinations of the RHNA appeals submitted by the local jurisdictions pursuant to Government Code Section 65584.05(e)(1).

BACKGROUND:

On January 6, 8, 11, 13, 15, 19, 22, and 25, 2021, the RHNA Appeals Board held a public hearing to review appeals on forty-seven (47) jurisdictions that were filed to revise the 6th RHNA cycle draft allocation. Following the appeal hearing, SCAG must make a final determination on the appeal decisions made at the eight (8) sessions. Per Government Code Section 65584.05(e)(1):

(e) No later than 45 days after the public hearing pursuant to subdivision (d), the council of governments or delegate subregion, as applicable, shall do both of the following:

(1) Make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to subdivision (b). Final determinations shall be based upon the information and methodology described in Section 65584.04 and whether the revision is

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

necessary to further the objectives listed in subdivision (d) of Section 65584. The final determination shall be in writing and shall include written findings as to how the determination is consistent with this article. The final determination on an appeal may require the council of governments or delegate subregion, as applicable, to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.

As required by Section 65584.05(e)(2), SCAG must also issue a proposed Final RHNA Allocation Plan, which will include any redistribution that resulted from successfully appealed units. A proposed Final RHNA Allocation Plan based on the written final determinations for the appeals has been included as part of the February 16, 2021 agenda following the recommended action on the final determination.

NEXT STEPS

Staff recommends that the RHNA Appeals Board ratify the written determinations as the final determinations of the RHNA appeals submitted by the local jurisdictions pursuant to Government Code Section 65584.05(e)(1).

The proposed Final Allocation Plan is recommended for further recommendation by the Community, Economic and Human Development (CEHD) Committee for adoption by the Regional Council at a special meeting scheduled for February 23, 2021. Subsequent to the CEHD Committee action to recommend Regional Council approval of the Final RHNA Allocation Plan, the Plan is scheduled for adoption at a public hearing session of the Regional Council at their March 4, 2021 meeting.

FISCAL IMPACT:

Work associated with this item is included in the current FY 2020-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF AGOURA HILLS

Hearing Date: January 13, 2021

The City of Agoura Hills has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Section 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins ((See Section 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology,

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Agoura Hills submits an appeal and requests a RHNA reduction of 106 units (of its draft allocation of 318 units). The grounds for appeal are as follows:

Change in Circumstance – Effects from the Woolsey Fire, which occurred in November 2018.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 13, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011321fullagn.pdf?1609982784>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board denies the appeal on the bases set forth in the staff report which are summarized as follows:

¹¹ Note that since the staff reports were published in the agenda packet, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

The City contends that while the Woolsey Fire occurred in November 2018 (within the timeframe within which input opportunities remained for the City regarding Connect SoCal and the RHNA methodology), two reports concerning the fire were published after April 2019 and constitute a changed circumstance. Both reports describe anticipated wildfire threats facing California and prescribe de-prioritizing residential development in areas of extreme risk and prioritizing infill development and overall housing production in more urban and low-risk regions. The City provided a CalFire map indicating that approximately two-thirds of the jurisdiction is classified as a Very High Fire Hazard Severity Zone (VHFHSZ), justifying the reduction of the draft RHNA allocation by two-thirds. However, no evidence is provided to demonstrate the assertion that Draft RHNA Allocation cannot be accommodated in the urban core where the City indicates it will concentrate planned development.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 13, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Roland Ok, Program Manager II,
(213) 236-1819, ok@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Agoura Hills

RECOMMENDATION:

Deny the appeal filed by the City of Agoura Hills to reduce the Draft RHNA Allocation by 106 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Agoura Hills requests a reduction of its RHNA allocation by 106 units (from 318 units to 212 units) based on changed circumstances, specifically from reports of effects from the Woolsey Fire, which occurred in November 2018.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Agoura Hills’ RHNA allocation.

The City contends that while the Woolsey Fire occurred in November 2018 (within the timeframe within which input opportunities remained for the City regarding Connect SoCal and the RHNA methodology), two reports concerning the fire were published after April 2019 and constitute a changed circumstance. Both reports describe anticipated wildfire threats facing California and prescribe de-prioritizing residential development in areas of extreme risk and prioritizing infill development and overall housing production in more urban and low-risk regions. The City provided a CalFire map indicating that approximately two-thirds of the jurisdiction is classified as a Very High Fire Hazard Severity Zone (VHFHSZ), justifying the reduction of the draft RHNA allocation by two-thirds. However, no evidence is provided to demonstrate the assertion that Draft RHNA Allocation

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Agoura Hills (Final Determination of Appeals Decisions)

cannot be accommodated in the urban core where the City indicates it will concentrate planned development.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, the City of Agoura Hills received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Agoura Hills: 318 units

Very Low Income: 127 units

Low Income: 72 units

Moderate Income: 55 units

Above Moderate Income: 64 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Agoura Hills. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Changed circumstances [Government Code Section 65584.05(b)].***

Agoura Hills contends that because two-thirds of the City is designated by CAL FIRE as a Very High Fire Hazard Severity Zone (VHFHSZ), the City's total RHNA allocation should be reduced by one-third. This would reduce the City's total RHNA allocation by 106 units, from 318 to 212 units. Agoura Hills argues that this reduction will allow the City to concentrate planned housing in the urbanized core, where there is a lower fire risk, and thereby prioritize infill development, encourage the protection of environmental resources, and seek to promote land use patterns that reduce greenhouse gas emissions.

SCAG Staff Response: SCAG does not dispute that the City (and other jurisdictions) are in areas that are at risk of wildfires. However, pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,’ as expressed in 65584.04(e)(2)(b), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of ‘available’ land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City's projected growth.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to determine RHNA need at the jurisdictional level. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

The Woolsey Fire occurred in November 2018, prior to the April 30, 2019 survey deadline for information considered by the Draft RHNA Methodology. The nine housing units lost in Agoura Hills in the Woolsey Fire were therefore accounted for in the Draft RHNA Methodology replacement need. The two reports cited in the City's appeal that constitute a changed circumstance make the case for strengthening land use practices and de-prioritizing new development in areas of the most extreme fire risk. As both the CAL FIRE map (See Attachment 2) and the appeal indicate, the urbanized core of Agoura Hills is not designated as a high fire risk zone. The City has not provided evidence that an agency or organization such as the California Department of Forestry and Fire Protection or FEMA has determined housing is unsuitable in these areas. Additionally, Agoura Hills has not provided evidence that it cannot plan for its assigned Draft RHNA Allocation in the urbanized core, which the City described as more suitable for future housing development and is at lower risk for wildfires.

For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's Draft RHNA Allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Agoura Hills had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Agoura Hills Draft RHNA Allocation.

1. Local Input

a. *Bottom-Up Local Input and Envisioning Process*

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS and later referred to as Connect SoCal) and the 6th cycle of RHNA.¹ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.² While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Agoura Hills, the anticipated number of households in 2020 was 7,655 and in 2030 was 8,069 (growth of 414 households). In March 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

¹ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

² A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Input from the City of Agoura Hills on the growth forecast was received on September 19, 2018. Following input, household totals were 7,496 in 2020 and 7,656 in 2030, for a reduced household growth during this period of 160.

b. Submitted RHNA methodology surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey, Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. SCAG reviewed all submitted responses as part of the development of the Draft RHNA Methodology. The Agoura Hills submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at: <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. The City of Agoura Hill's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.³ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

³ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

3. Final RHNA Methodology and Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the Covid-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Agoura Hills received its Draft RHNA Allocation on September 11, 2020. Application of the RHNA methodology yields the Draft RHNA Allocations for the City of Agoura Hills as summarized in the data and in the tables below.

City of Agoura Hills Statistics and Inputs		Calculation of Draft RHNA Allocation for Agoura Hills	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	132	Forecasted household (HH) growth, RHNA period:	132
Percent of households who are renting:	26%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	3
Housing unit loss from demolition (2009-18):	9	Replacement Need:	9
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	436	TOTAL PROJECTED NEED:	144
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	4.62%	Existing need due to job accessibility (50%):	159
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	464,000	Existing need due to HQTa pop. share (50%):	0
Share of region's job accessibility (population weighted):	0.04%	Net residual factor for existing need: <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	15
Jurisdiction's HQTa population (2045):	-	TOTAL EXISTING NEED:	173
Share of region's HQTa population (2045):	0.00%	TOTAL RHNA FOR THE CITY OF AGOURA HILLS:	318
Share of population in low/very low-resource tracts:	0.00%	Very-low income (<50% of AMI):	127
Share of population in very high-resource tracts:	100.00%	Low income (50-80% of AMI):	72
Social equity adjustment:	180%	Moderate income (80-120% of AMI):	55
		Above moderate income (>120% of AMI)	64

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 0 living within HQTAs, the City of Agoura Hills represents 0.00% of the SCAG region’s HQTA population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Agoura Hill’s median TAZ, it will be possible to reach 4.62% of the region’s jobs in 2045 within a 30-minute automobile commute (464,000 based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 15 units assigned to the Agoura Hills

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF ALHAMBRA

Hearing Date: January 11, 2021

The City of Alhambra has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Alhambra submits an appeal and requests a RHNA reduction of 3,490 units (of its draft allocation of 6,808 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA
2. Existing or projected jobs-housing balance
3. Availability of land suitable for urban development or for conversion to residential use
4. The region's greenhouse gas (GHG) emissions targets
5. Affirmatively furthering fair housing
6. Change in circumstances

Other: The City also challenges the regional determination.

B. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 11, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011121fullagn_0.pdf?1609868354). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

C. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the adopted Final RHNA Methodology for the 6th Cycle RHNA, sufficient evidence was not provided to support the claims of a misapplication of the adopted RHNA methodology.
- 2) Regarding existing or projected jobs-housing balance, jobs-housing balance is already addressed in the Final RHNA Methodology and is assessed at the regional, not jurisdictional level.
- 3) Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
- 4) Regarding the region's greenhouse gas (GHG) emissions targets, Connect SoCal has demonstrated achievement of all applicable regional GHG emission reduction targets set by the California Air Resources Board (CARB). The adopted RHNA Methodology allocates housing to jurisdictions in a manner that is consistent with the Connect SoCal development pattern. In addition, the 6th cycle RHNA does not change the population forecast from Connect SoCal either in 2029 (end of RHNA period), or for any year during the Connect SoCal growth forecast, including 2035, for which Connect SoCal is required to meet the applicable regional GHG emission reduction target.
- 5) Regarding Affirmative furthering fair housing, the Final RHNA Methodology accounts for local income disparities through the application of a social equity adjustment and the inclusion of access to resources as an influencing factor.
- 6) Regarding change in circumstances, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore,

impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

- 7) Other: The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments

January 11, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Michael Gainor, Senior Regional Planner,
(213) 236-1822, Gainor@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Alhambra

RECOMMENDED ACTION:

Deny the appeal filed by the City of Alhambra (the City) to reduce its Draft RHNA Allocation from its current allocation of 6,808 units to 3,318 units, a reduction of 3,490 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

EXECUTIVE SUMMARY:

SUMMARY OF APPEAL:

The City of Alhambra requests a reduction of its RHNA allocation by 3,490 units from its current allocation of 6,808 residential units to 3,318 units (51.3 percent) based on the following six issues:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA
- 2) Existing or projected jobs-housing balance
- 3) Availability of land suitable for urban development or for conversion to residential use
- 4) The region’s greenhouse gas (GHG) emissions targets
- 5) Affirmatively furthering fair housing
- 6) Change in circumstances

Other: The City also challenges the regional determination.

RATIONALE FOR STAFF RECOMMENDATION:

SCAG staff have reviewed the appeal and recommend no change to the City of Alhambra’s draft RHNA allocation.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Alhambra (Final Determination of Appeals Decisions)

Issue 1: The appeal based on the failure of the adopted Final RHNA Methodology to appropriately account for local factors regarding local constraints for future residential development, such as open space deficits, incompatible industrial uses, environmental contamination, and high levels of existing density, is not accepted because sufficient evidence was not provided to support the claims of a misapplication of the adopted RHNA methodology.

Issue 2: The appeal based on impacts to regional jobs/housing balance is not accepted because jobs/housing balance is already addressed in the RHNA methodology and is assessed at the regional, not jurisdictional level.

Issue 3: The appeal based on the availability of land suitable for urban development is not accepted because the consideration of the availability of land suitable for urban development must include other types of land use opportunities other than vacant land.

Issue 4: The appeal based on potential conflict with SCAG's regional greenhouse gas (GHG) emission reduction goals is not accepted because Connect SoCal has demonstrated achievement of all applicable regional GHG emission reduction targets set by the California Air Resources Board (CARB). The adopted RHNA Methodology allocates housing to jurisdictions in a manner that is consistent with the Connect SoCal development pattern. In addition, the 6th cycle RHNA does not change the population forecast from Connect SoCal either in 2029 (end of RHNA period), or for any year during the Connect SoCal growth forecast, including 2035, for which Connect SoCal is required to meet the applicable regional GHG emission reduction target.

Issue 5: The appeal based on factors related to 'Affirmatively Further Fair Housing' (AFFH) is not accepted because the RHNA methodology accounts for local income disparities through application of a social equity adjustment and the inclusion of access to resources as an influencing factor.

Issue 6: The appeal based on a change in circumstances related to the COVID-19 pandemic is not accepted because evidence was not provided that the City has been disproportionately burdened by the pandemic relative to other jurisdictions in the SCAG region.

Other: The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the RHNA allocation for the City of Alhambra is provided below.

Total RHNA Allocation for the City of Alhambra: 6,808 units

Very Low Income: 1,769 units

Low Income: 1,033 units

Moderate Income: 1,077 units

Above Moderate Income: 2,929 units

Additional background information related to the draft RHNA allocation for the City of Alhambra is provided in Attachment 1.

Summary of Comments Received During 45-day Comment Period

No comments were received from local jurisdictions or the California Department of Housing and Community Development (HCD) during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed by the City of Alhambra. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Cities Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:**Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].**

The City contends that the adopted Final RHNA Methodology fails to appropriately account for local factors regarding constraints to future residential development, such as open space deficits, incompatible industrial uses, environmental contamination, high levels of existing density, and energy reliability. Additionally, the appeal asserts that the City is not a high-resourced community and should not receive a residual need that exempted low-resourced communities from “residual” existing need in the Final RHNA Methodology.

SCAG Staff Response: The adopted Final RHNA Methodology is not the basis for an appeal. An appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction.

As described in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the SCAG Regional Council on March 5, 2020 and describes the various policy factors by which housing unit need is to be allocated across the region including anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally reviewed input data and describes in detail the RHNA data sources and how they are calculated.

On January 13, 2020, the Draft RHNA Methodology was found by HCD to further the five statutory RHNA objectives¹, in large part due to its use of objective factors. As such, SCAG is not permitted to consider these factors differently from one jurisdiction to another. The reliance on locally reviewed data ensures that the regional planning process accurately reflects local conditions, including existing planning opportunities and constraints.

While the City argues in its appeal that Alhambra’s job and transit accessibility factors have been overstated, sufficient supportive evidence has not been provided to suggest that any of the input data used in the RHNA methodology was incorrect. Specifically, the City asserts that there are no

¹ The five RHNA objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households; 2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas (GHG) reduction targets provided by the State Air Resources Board pursuant to Section 65080; 3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction; 4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey; and 5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

properties within one-half mile of a major transit stop, yet it does not provide any data-based evidence or documentation to support a dispute to the number of households within the jurisdiction that have access to transit as determined in the adopted Final RHNA Methodology. The City of Alhambra's forecast of 2045 'High Quality Transit Area' (HQTA) population (81,862), and its share of 2045 regional jobs which may be accessed within a 30-minute AM peak period automobile commute time (15.85%), are the two major inputs to the existing need portion of the methodology.

The City of Alhambra also asserts in its appeal that the City struggles with energy reliability due to decisions made by its energy provider and that "residential development at the scale required to meet the City's draft RHNA allocation far exceeds any of SoCal Edison's projections for future capacity." The appeal states that the City's draft RHNA allocation will exacerbate this issue. However, energy reliability is not one of the factors adopted as part of the Final RHNA Methodology.

While the City asserts that local factors were not adequately considered in the adopted RHNA methodology, the adopted Final RHNA Methodology itself is not subject to appeal. Moreover, the City does not present sufficient supporting evidence to indicate an error in SCAG's application of the adopted Final RHNA Methodology in the determination of the City's draft RHNA allocation. For these reasons, SCAG staff does not recommend a reduction to the City's RHNA allocation based on the application of the Final RHNA Methodology.

Issue 2: Existing or projected jobs-housing balance [Government Code Section 65584.04(e)(1)].

The City contends that the RHNA methodology was improperly applied in the assessment of the City's access to transit and proximity to employment centers, resulting in an overstatement of its existing housing needs. The City has comparable commute times to other Los Angeles County jurisdictions but has a higher percentage of single-occupancy drivers than the County as a whole. The City's draft RHNA allocation would therefore negatively impact the regional jobs-housing relationship.

SCAG Staff Response: As discussed in the preceding section, the adopted RHNA Methodology is not an eligible basis for appeal. The RHNA process, as defined in Government Code section 65584 *et seq.*, and as discussed above, specifies that a council of government's regional housing needs allocation plan shall further five objectives. While transit accessibility is not explicitly referenced, promoting housing development based on a jurisdiction's population residing within an HQTA is consistent with objectives related to the promotion of infill development and improving intraregional jobs-housing relationships.

Jobs-housing balance is most effectively assessed at the regional scale, extending beyond the boundaries of any individual jurisdiction. Over 80 percent of workers in the SCAG region live and work in different jurisdictions, a figure that accounts for those who work from home. This requires

an approach to the region's jobs-housing relationship based on an assessment of access to regional jobs rather than on the number of jobs located within a particular jurisdiction. Limiting the scope of a jobs-housing balance evaluation to an individual jurisdiction's boundaries may effectively worsen a regional jobs-housing imbalance. Since the Final RHNA Methodology's job accessibility factor already assesses this at a regional scale and the City does not provide evidence challenging the share of 2045 regional jobs which may be accessed within a 30-minute AM peak period automobile commute time (15.85%) used in the methodology, SCAG staff does not recommend a reduction to the City's draft RHNA allocation based on this factor.

Issue 3: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City of Alhambra argues that it has limited availability of suitable land for urban development or conversion to residential use. The City has significant constraints for future residential development, including a lack of available open space, incompatible industrial uses, land use restrictions related to environmental contamination, and high levels of existing density that preclude it from further increasing density to accommodate its draft RHNA allocation. The City has indicated that it has limited opportunities for lot consolidation or rezoning to accommodate its draft RHNA allocation. Specifically, the City states that, according to its 5th RHNA cycle housing element, it has only 53.7 acres of vacant and underutilized land to accommodate its draft RHNA allocation.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use”, as expressed in 65584.04(e)(2)(B), is not restricted only to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities should be considered components of ‘available’ land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter, p. 2).

As such, the City should consider other land use opportunities for residential development. This includes underutilized land, opportunities for infill development and increased residential densities, alternative zoning, and accessory dwelling units. Alternative development opportunities should be explored further to provide the land use capacity needed to zone for the City's projected growth.

Note that while zoning and capacity analysis may be used to meet RHNA need, these tools should not be used to determine RHNA need at the jurisdictional level. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected, is independent of zoning and other related land use restrictions, and in some cases may be exacerbated by these restrictions. Therefore, land use capacity that is restricted by factors unrelated to existing or projected housing need may not be used to determine existing or projected housing need. Additionally, while SCAG encourages the City to consider land still available as identified in its 5th cycle housing element, its 6th cycle housing element should not be limited only to what was identified in a prior cycle. For these reasons, SCAG staff does not recommend a reduction to the City of Alhambra's draft RHNA allocation based on this factor.

Issue 4: The region's greenhouse gas emissions targets [Government Code Section 65584.04(e)(12)].

The City contends that its current draft RHNA allocation would encourage longer commute times and increase vehicle miles traveled, which conflicts with the State's greenhouse gas (GHG) emissions reduction goals. Specifically, the City asserts that Alhambra's single-occupant vehicle commute share is higher than the Los Angeles County average.

SCAG Staff Response: As discussed in Issue 1 and below, the adopted Final RHNA Methodology is not an eligible basis for appeal. Data from SCAG's 2020 Regional Transportation Plan and Sustainable Community Strategy (Connect SoCal) was used to inform how the RHNA methodology furthers this objective. As described in Attachment 1, a substantial portion of Alhambra's draft RHNA allocation results from its location near future employment and transit. The median Alhambra resident in 2045 may expect to be able to access 1,592,000 jobs within a 30-minute commute time, which is in the top one-third of jurisdictions regionally. While this is not as high as some jurisdictions (the City of Commerce leads the region with being able to reach 2,342,000 jobs), the units assigned to Alhambra based on this factor are commensurate with its level of job access. Since approximately 37 percent of statewide GHG emissions are generated by transportation sources, and 21 percent of travel is job related, additional residential development in locations which score high on the job accessibility measure provides an important tool toward achieving regional GHG emission reduction targets.

Connect SoCal specifically provides a regional plan for reducing travel related GHG emissions by employing land use policies at the regional level. While SCAG acknowledges the potential for an increase in the City's per capita GHG emissions if the 6,808 units allocated for Alhambra are developed, planning for this development in a manner that is consistent with the development patterns defined in Connect SoCal would reduce region-wide GHG impacts by placing these units in areas that are close to jobs and transit. In addition, HCD's regional determination is largely based on measures of existing need (overcrowding) rather than regional population growth. As such, much of the RHNA allocation intends to accommodate current population. Since Connect SoCal's modeling

of regional travel indicates that Alhambra scores relatively highly in terms of job accessibility, increased housing stock in Alhambra (compared to other locations with poorer job access) would improve regional GHG performance, which is a statutory objective of RHNA. For this reason, SCAG staff does not recommend a reduction to Alhambra's draft RHNA allocation based on this factor.

Issue 5: Affirmatively furthering fair housing.

The City contends that the RHNA methodology overstates the City's existing housing needs and does not affirmatively further fair housing. The City already has a disproportionately high percentage of lower income households and has a lower median income than the Los Angeles County average. Some of its share of existing housing need should therefore be reallocated to higher-resource jurisdictions to provide more equity and to better reflect the region's obligation to affirmatively further fair housing.

SCAG Staff Response: As discussed in Issue 1 and below, a challenge to the adopted RHNA methodology is not an eligible basis for appeal. One of the five objectives of RHNA law is to ensure that the RHNA allocation plan allocates "a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category". The adopted RHNA methodology addresses this disparity through its social equity adjustment and inclusion of access to resources as an influencing factor.

To further the objectives of allocating a lower proportion of households by income and affirmatively furthering fair housing (AFFH), the RHNA Methodology includes a minimum 150 percent social equity adjustment and an additional 10 to 30 percent added in areas with significant populations that are defined as very low or very high resource areas, referred to as an AFFH adjustment. A social equity adjustment ensures that jurisdictions accommodate their fair share of each income category. Rather than using an individual jurisdiction's median household income as a basis, the RHNA methodology uses the county median income as the benchmark to determine household income distribution among the four RHNA income categories for each jurisdiction. The result is that jurisdictions that have a higher concentration of lower income households than the county average will receive lower percentages of RHNA for the lower income categories. While Alhambra provides data indicating its household income is lower than the County average, the RHNA methodology reflects this and it is not inconsistent with the data provided by the City.

Households by Income Category, SCAG RHNA Methodology
(2017 American Community Survey 5-year sample)

Jurisdiction	Very-Low Income	Low Income	Moderate	Above Moderate
Los Angeles County	26%	15%	16%	43%
Alhambra	29%	15%	17%	39%

For this reason, SCAG staff does not recommend a reduction to Alhambra’s draft RHNA allocation based on this factor.

Issue 6: Changed Circumstances [Government Code 65584.05(b)].

The City’s appeal indicates that the COVID-19 pandemic has resulted in a significant change of circumstance relative to the development of new housing and increasing residential densities. Creating more housing, specifically higher density housing, limits the ability to maintain appropriate levels of social distancing needed to control disease spread. Alhambra is already quite dense and lacks adequate open space. New housing opportunities would be better developed elsewhere where these needs may be met.

SCAG Staff Response: SCAG’s Regional Council delayed adoption of Connect SoCal by 120 days in order to provide adequate time to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19. However, Connect SoCal’s long-range (2045) forecasts for these variables remained unchanged. The Connect SoCal ‘Demographics and Growth Forecast’ Technical Report² outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, including the SCAG region’s share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region’s long-term economic competitiveness or employment outlook for 2023-2045. As such, SCAG’s assessment of comparable data does not suggest long-range regional employment declines.

The COVID-19 pandemic has produced significant impacts throughout Southern California. However, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in regional demand for housing or housing need. Southern California home prices have continued to increase (+2.6 percent from August to September 2020), led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation covers an eight-year planning period and is not unduly influenced by immediate or near-term impacts.

² See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579

Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that Alhambra's housing need has been disproportionately impacted relative to the rest of the SCAG region. For these reasons, SCAG staff does not recommend a reduction to the City of Alhambra's draft RHNA allocation in response to this factor.

Other: The City challenges the regional determination.

While not an eligible basis for appeal, the City of Alhambra indicates that the overall regional RHNA determination resulting in a total allocation of 1.34 million new housing units in the SCAG region was flawed and is inconsistent with the legal requirements imposed by Government Code Section 65584.01(a).

SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not an eligible basis for appeal per adopted RHNA Appeals Procedures, and it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination.

While the RHNA statute prescribes specific requirements for HCD in determining the regional housing need (e.g., the determination shall be based on population projects produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans), it allows HCD to accept or reject information provided by SCAG with respect to the data assumptions from SCAG's growth forecast or to modify its own assumptions or methodology based on this information. HCD did not materially change the regional determination following SCAG's formal objection filed on September 18, 2019, and there are no further mechanisms provided for in statute to contest their decision. Nevertheless, SCAG has a statutory obligation to complete the remaining steps required in the RHNA process—namely the adoption of a final RHNA methodology, conducting an appeals process, and issuing final RHNA allocations.

FISCAL IMPACT:

Work associated with this item is included in the current FY 2020-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment describes the nature and timing of the opportunities the City of Alhambra had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the 2020 RTP/SCS (Connect SoCal) Growth Vision. It also describes the process by which the RHNA methodology development process integrated this information to develop the City of Alhambra’s Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data in preparation for development of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) and the 6th cycle of RHNA.³ Each local jurisdiction was provided a package of land use, transportation, environmental, and growth forecast data for review and revision, which was due on October 1, 2018.⁴ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were also accepted and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Alhambra, the anticipated number of households in 2020 was 30,391 and in 2030 was 31,329 (growth of 938 households). In February 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of

³ While the RTP/SCS and RHNA share some common data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoning capacity to accommodate this need. A further discussion of the relationship between these processes may be found in Connect SoCal Master Response 1:

https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁴ A detailed list of data reviewed during this process may be found in each jurisdiction’s Draft Data/Map Book:

<https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Alhambra on the growth forecast was received in October 2018. Following input, household totals were 30,304 in 2020 and 31,070 in 2030⁵, for a reduced household growth during this period of 766.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB 2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Alhambra submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

2. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to achieve the SCAG region's GHG reduction targets, as provided by the California Air Resources Board (CARB) in accordance with state planning law.

Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections, may be found at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay

⁵ The City provided the attached data verification form but did not provide a 2030 households value. This final Connect SoCal figure was derived based on the 2035 household total of 31,410 which was provided in this form and is a reduction from SCAG's preliminary 2035 household total of 31,745.

full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management (SPM-DM) site at: <http://spmdm.scag.ca.gov>.

Updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of Alhambra that differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be

used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020: <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, following extensive debate and public comment, the SCAG Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology, which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: 'projected need', which includes the number of housing units required to accommodate anticipated population growth over the eight-year RHNA planning period; and 'existing need', which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁶ Furthermore, the adopted Final RHNA Methodology utilizes measures of 2045 job accessibility and 'High Quality Transit Area' (HQTA) population based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data obtained through the Connect SoCal Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The RHNA methodology is described in further detail at:

⁶ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing need in the current population (existing need) and would not result in a change in regional population. For further discussion, see Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Alhambra

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Alhambra received its draft RHNA allocation on September 11, 2020. Application of the adopted RHNA methodology yields the draft RHNA allocation for the City of Alhambra, as summarized in the data and calculations featured in the table below.

City of Alhambra Statistics and Inputs		Calculation of Draft RHNA Allocation for Alhambra	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	632	Forecasted household (HH) growth, RHNA period:	632
Percent of households who are renting:	60%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	23
Housing unit loss from demolition (2009-18):	69	Replacement Need:	69
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	1,793	TOTAL PROJECTED NEED:	724
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	15.85%	Existing need due to job accessibility (50%):	2,218
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,592,000	Existing need due to HQTa pop. share (50%):	3,341
Share of region's job accessibility (population weighted):	0.53%	Net residual factor for existing need:	525
		<i>(Negative values reflect a cap on lower-resourced communities with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	
Jurisdiction's HQTa population (2045):	81,862	TOTAL EXISTING NEED:	6,085
Share of region's HQTa population (2045):	0.80%	TOTAL RHNA FOR THE CITY OF ALHAMBRA:	6,808
Share of population in low/very low-resource tracts:	0.00%	Very-low income (<50% of AMI):	1,769
Share of population in very high-resource tracts:	6.32%	Low income (50-80% of AMI):	1,033
Social equity adjustment:	150%	Moderate income (80-120% of AMI):	1,077
		Above moderate income (>120% of AMI):	2,929

The transit accessibility measure is based on the population anticipated to live within ‘High Quality Transit Areas’ (HQTAs) in 2045 based on Connect SoCal’s designation of HQTAs and population forecasts. With a forecasted 2045 population of 81,862 living within HQTAs, the City of Alhambra will account for 0.80 percent of the SCAG region’s total 2045 HQTA population, which provides the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as a jurisdiction’s share of regional jobs that are accessible within a 30-minute commute time. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs located within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which may be reached within a 30-minute automobile commute time from a local jurisdiction’s median TAZ is used to allocate housing units based on the job accessibility factor. From the City of Alhambra’s median TAZ, it will be possible to reach 15.85 percent of the region’s jobs in 2045 within a 30-minute automobile commute (1,592,000 jobs), based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs.

An additional factor was included in the methodology to account for RHNA Objective 5: to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered ‘Disadvantaged Communities’ (DACs) based on access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as ‘residual need’, is then reallocated to non-DAC jurisdictions in order to ensure that new housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 525 units assigned to the City of Alhambra.

Please note that the above discussion represents only a partial description of the key data and calculations featured in the adopted RHNA allocation methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF BARSTOW

Hearing Date: January 6, 2021

The City of Barstow has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

- “(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.
- (5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

- “(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.
- (2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:
 - (A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.
 - (B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Barstow submits an appeal and requests a RHNA reduction of 635 units (of its draft allocation of 1,516 units). The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) - objects SCAG's adopted RHNA methodology and provides an alternative methodology which considers the City's average population growth over ten years and average household size.
- 2) Affirmatively Furthering Fair Housing (AFFH) - the City's share of very low-income households already exceeds one-third of its total population, and therefore, the City should receive a RHNA reduction.
- 3) High housing cost burdens - state housing legislation requiring the installation of solar panels, electric vehicle hookups, and fire sprinklers in non-fire prone areas, increases the cost of building housing.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 6, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010621fullagn.pdf?1609379165>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) The City's objection to the adopted Final RHNA Methodology developed for the 6th Cycle RHNA, and proposal of an alternative methodology to reflect the City's unique circumstances, may not be considered a basis for appeal. An appeal citing the application of the adopted Final RHNA Methodology as its basis must refer to the application of the methodology, not the methodology itself.
- 2) The City's request to reduce their RHNA allocation based on AFFH factors, was already addressed through the application of the social equity adjustment, which had been included in the City's Draft RHNA Allocation.
- 3) The high housing cost burden factor refers to households paying more than 30 percent of their income in rent, not to the cost of construction. Cost burdens associated with new housing development may not be considered by SCAG as a justification for a reduction since the RHNA allocation does not establish a building quota and does not impede the City from the use of alternative zoning strategies to accommodate its allocated housing need.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 6, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Michael Gainor, Senior Regional Planner,
(213) 236-1822, Gainor@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Barstow

RECOMMENDED ACTION:

Deny the appeal filed by the City of Barstow (the City) to reduce its Draft RHNA Allocation by 635 housing units, from 1,516 units to 881 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Barstow requests a reduction of its RHNA allocation by 635 units (from 1,516 units to 881 units) based on the following issues:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029)
2. Affirmatively Furthering Fair Housing (AFFH)
3. High housing cost burdens

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Barstow’s Draft RHNA Allocation. The City’s first issue, which is an objection to the adopted Final RHNA Methodology developed for the 6th Cycle RHNA, and proposal of an alternative methodology to reflect the City’s unique circumstances, may not be considered a basis for appeal. Issue 2, the City’s request to reduce their RHNA allocation based on AFFH factors, was already addressed through the application of the social equity adjustment, which had been included in the City’s Draft RHNA Allocation. Lastly, the City’s third issue regarding the consideration of high cost burdens associated with new housing development, may not be considered by SCAG as a justification for a reduction since the RHNA allocation does not establish a building quota and does not impede the City from the use of alternative zoning strategies to accommodate its allocated housing need.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Barstow (Final Determination of Appeals Decisions)

BACKGROUND:**Draft RHNA Allocation**

Following adoption of the Final RHNA Methodology on March 5, 2020 and adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the Draft RHNA Allocation for the City of Barstow is provided below.

Total RHNA for the City of Barstow: 1,516 units

- Very Low Income: 171 units
- Low Income: 227 units
- Moderate Income: 299 units
- Above Moderate Income: 819 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or the California Department of Housing and Community Development (HCD) during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Barstow. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)].

The City of Barstow is requesting a modification of its RHNA allocation based on its objection to SCAG's adopted RHNA methodology. The City provided an alternative methodology which includes

consideration of the City's average percentage of population growth over ten years and average household size. Assuming an optimistic one percent population growth rate for the city, Barstow is requesting a revised RHNA allocation of 881 units (60 very low income, 60 low income, 234 moderate income, and 527 above moderate income), representing a 635-unit reduction from its Draft RHNA Allocation.

SCAG Staff Response: Please see staff report Attachment #1, 'Local Input and Development of Draft RHNA Allocation', which describes the extent of local engagement and the opportunities provided to local jurisdictions to participate in the development of the RHNA methodology. The Final RHNA Methodology was adopted by the SCAG Regional Council on March 5, 2020 and describes the various policy factors by which housing unit need is to be allocated across the region; for example, anticipated household growth, access to jobs and transit, and housing vacancy. The methodology makes extensive use of locally reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the RHNA methodology was found by HCD to further the five statutory RHNA objectives¹ in large part due to its use of objective factors and, as such, SCAG may not consider factors differently in one jurisdiction versus another.

An appeal citing the adopted RHNA methodology as its basis must refer to the application of the methodology, not the methodology itself. An example of an improper application of the adopted RHNA methodology might be a data error which was identified by a local jurisdiction. The City of Barstow has not provided evidence of such a data error or any other misapplication of the adopted RHNA methodology, and therefore, the City may not appeal under this basis. Moreover, appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology and supported by adequate documentation. The basis for the City's proposed alternative allocation methodology and supporting data does not meet this requirement. Finally, the City has failed to explain why its proposed revision is necessary to further the intent of the objectives listed in Government Code section 65584(d). For these reasons, SCAG staff does not recommend a reduction to Barstow's draft RHNA allocation based on this issue.

Issue 2: Affirmatively furthering fair housing.

¹ The five RHNA objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. 2) Promoting infill development and socioeconomic equity, protection of environmental and agricultural resources, encouragement of efficient development patterns, and achievement of the region's greenhouse gas (GHG) emissions reduction targets as established by the California Air Resources Board (CARB) pursuant to Section 65080. 3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. 4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. 5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

The City of Barstow asserts that, based on AFFH parameters, the City's share of very low-income households already exceeds one-third of its total population, and therefore, the City should receive a reduction of the RHNA allocation.

SCAG Staff Response: One of the five objectives of RHNA law is to ensure that the RHNA allocation plan allocates “a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category”. While SCAG staff accepts the assertion that Barstow currently has a disproportionately high percentage of lower income households in comparison to San Bernardino County (59 percent and 41 percent, respectively), the RHNA methodology addresses this disparity through its social equity adjustment and inclusion of access to resources as an influencing factor.

To further the objectives of allocating a lower proportion of households by income and AFFH, the RHNA methodology includes a minimum 150 percent social equity adjustment, and an additional 10 to 30 percent in areas with significant populations that are defined as very low or very high resource areas, referred to as an AFFH adjustment. A social equity adjustment ensures that jurisdictions accommodate their fair share for each defined income category. It does so by adjusting current household income distribution in comparison to the countywide distribution. The result is that jurisdictions that have a higher concentration of lower income households than the county will receive lower percentages of RHNA for the lower income categories. For example, for the City of Barstow, 11 percent of the jurisdiction's draft RHNA allocation is assigned for the very low-income category, which is lower than its current 42 percent and lower than the San Bernardino County distribution of 25 percent. Thus, the RHNA methodology, and by extension the jurisdiction's draft RHNA allocation, has already considered this objective to ensure that there is not an overconcentration of lower income households in these currently impacted areas. For this reason, SCAG staff does not recommend a reduction to Barstow's draft RHNA allocation based on this issue.

Issue 3: High Housing Cost Burdens [Government Code Section 65584.04(e)(6)].

The City of Barstow asserts that recent state housing legislation requiring the installation of solar panels, electric vehicle hookups, and fire sprinklers in non-fire prone areas, increases the cost of building a single-family home by about 10 percent. This effectively reduces a developer's ability to invest in the City. The City has an abundant amount of affordable land available to build housing but without investors, it'll be difficult to meet the RHNA allocation. The City believes that if restrictions were lifted, Barstow would be in a better position to meet its RHNA allocation.

SCAG Staff Response: Construction costs cannot be considered by SCAG as a justification for a reduction since the purpose of a RHNA allocation is to ensure that there is adequate zoning to accommodate housing need. The full text of this factor: “The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent” refers to the proportion of renter

households who are considered cost-burdened for housing. It does not refer to the cost of construction.

The City acknowledges that much of the market rate housing is within the range of affordability and that it is easy to get section 8 housing due to low rental prices. However, there is little demand for purchasing homes. Neither of these facts support this high housing cost burden factor. For these reasons, SCAG staff does not recommend a reduction to Barstow's draft RHNA allocation based on this issue.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Barstow had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrated this information in order to develop the City of Barstow’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.² Each jurisdiction was provided a package of land use, transportation, environmental, and growth forecast data for their review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Barstow, the projected number of households in 2020 was 9,435 and in 2030 was 11,382 (growth of 1,947 households). In March 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and to answer questions. Input from the City of

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes may be found in Connect SoCal Master Response 1:

https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data reviewed during this process may be found in each jurisdiction’s Draft Data/Map Book:

<https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Barstow on the growth forecast was received in October 2018. Following this input, household totals for Barstow were revised to 9,030 in 2020 and 10,560 in 2030, reflecting a reduced projected household growth over this ten-year period of 1,530.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Barstow submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections may be reviewed at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spm dm.scag.ca.gov>, and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of Barstow from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- 1) *Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households.*
- 2) *Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- 3) *Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- 4) *Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- 5) *Affirmatively furthering fair housing. (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in

Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020: <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: ‘projected need’ which includes the number of housing units required to accommodate anticipated population growth over the eight-year RHNA planning period and ‘existing need’, which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and ‘High Quality Transit Area’ (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from the Connect SoCal Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The RHNA methodology is described in further detail at:

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing need in the current population (existing need) and does not affect a change in regional population. For further discussion, see Connect SoCal Master Response 1:

https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

3. Draft RHNA Allocation for the City of Barstow

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Barstow received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Barstow as summarized in the data and calculations featured in the table below.

Barstow city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	1262
Percent of households who are renting:	55%
Housing unit loss from demolition (2009-18):	23
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	3,963
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	0.28%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	28,000
Share of region's job accessibility (population weighted):	0.00%
Jurisdiction's HQTa population (2045):	4,202
Share of region's HQTa population (2045):	0.04%
Share of population in low/very low-resource tracts:	99.87%
Share of population in very high-resource tracts:	0.00%
Social equity adjustment:	180%

Calculation of Draft RHNA Allocation for Barstow city	
Forecasted household (HH) growth, RHNA period:	1262
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	43
Replacement Need	23
TOTAL PROJECTED NEED:	1328
Existing need due to job accessibility (50%)	16
Existing need due to HQTAs pop. share (50%)	172
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	0
TOTAL EXISTING NEED	188
TOTAL RHNA FOR BARSTOW CITY	1516
Very-low income (<50% of AMI)	172
Low income (50-80% of AMI)	227
Moderate income (80-120% of AMI)	299
Above moderate income (>120% of AMI)	818

The transit accessibility measure is based on the population anticipated to live in ‘High Quality Transit Areas’ (HQTAs) in 2045 based on Connect SoCal’s designation of HQTAs and population forecasts. With a forecasted 2045 population of 4,202 living within HQTAs, the City of Barstow will represent 0.04 percent of the SCAG region’s total HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute commute time. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand

model output for the year 2045 rather than assigning housing units based on the number of jobs located within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on job accessibility. From the City of Barstow's median TAZ, it will be possible to reach 0.28 percent of the region's jobs in 2045 within a 30-minute automobile commute (28,000 jobs), based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs,

Please note that the above represents only a partial description of the key data and calculations included in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF BELLFLOWER

Hearing Date: January 8, 2021

The City of Bellflower has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Bellflower submits an appeal and requests a RHNA reduction of 2,726 units (of its draft allocation of 3,726 units). The grounds for appeal are as follows:

- 1) Existing or projected jobs-housing balance - adding housing would exacerbate the existing job/housing imbalance (sufficient housing but insufficient jobs) forcing residents to commute to jobs outside of the City.
- 2) Sewer or water infrastructure constraints - water and sewer providers might not have the capacity to accommodate the City's expected growth in addition to the growth of neighboring cities without additional infrastructure.
- 3) The region's greenhouse gas emissions targets - implementing their RHNA allocation would prevent the City from achieving the GHG emission targets established by the City's Climate Action Plan.

A. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 8, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010821fullagn.pdf?1609455450>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the public hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding existing or projected jobs housing balance, SCAG's Final RHNA Methodology already accounts for the job-housing balance at a regional level.
- 2) Regarding sewer or water infrastructure constraints, evidence from a utility service provider that would preclude the construction of new housing was not demonstrated and costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction.
- 3) Regarding the region's greenhouse gas emissions targets, the statutory objective of RHNA is to promote the achievement of the region's GHG emissions targets as specified by ARB (Government Code 65584(e)). Since Connect SoCal's modeling of regional travel indicates that Bellflower is one of the best places in the region to access jobs, increased housing stock in Bellflower (compared to elsewhere) would reduce regional GHG emissions.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 8, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Bellflower

RECOMMENDED ACTION:

Deny the appeal filed by the City of Bellflower (City) to reduce the Draft RHNA Allocation for the City by 2,726 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Bellflower requests a reduction of its RHNA allocation [by 2,726 units (from 3,726 units to 1,000 units)] based on the following issues:

1. Existing or projected jobs-housing balance - adding housing would exacerbate the existing job/housing imbalance (sufficient housing but insufficient jobs) forcing residents to commute to jobs outside of the City.
2. Sewer or water infrastructure constraints - water and sewer providers might not have the capacity to accommodate the City’s expected growth in addition to the growth of neighboring cities without additional infrastructure.
3. The region’s greenhouse gas emissions targets - implementing their RHNA allocation would prevent the City from achieving the GHG emission targets established by the City’s Climate Action Plan.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Bellflower’s RHNA allocation. SCAG’s final RHNA methodology already accounts for the issue raised in Issue 1. Based on Issue 2, evidence from a utility service provider that would preclude the construction of new housing was not demonstrated and costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction. Based on Issue 3, the statutory objective of

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Bellflower (Final Determination of Appeals Decisions)

RHNA is to promote the achievement of the region's GHG emissions targets as specified by ARB (Government Code 65584(e)). Since Connect SoCal's modeling of regional travel indicates that Bellflower is one of the best places in the region to access jobs, increased housing stock in Bellflower (compared to elsewhere) would reduce regional GHG emissions.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Bellflower: 3,726 units

Very Low Income: 1,012 units

Low Income: 487 units

Moderate Income: 552 units

Above Moderate Income: 1,675 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Bellflower. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Existing or projected jobs-housing balance [Government Code Section 65584.04(e)(1)].***

The City argues that an excessive RHNA allocation will exacerbate the job/housing imbalance the jurisdiction is experiencing. The City calculates Bellflower's job to housing ratio to be 0.27 demonstrating sufficient housing but insufficient jobs, which will force residents to commute to jobs outside of the city. Adding the 3,726 RHNA units would result in a job/housing ration of 0.24 and exacerbate the jobs/housing imbalance in the City and region. The loss of jobs will be further worsened by COVID-19.

SCAG Staff Response: The adopted RHNA methodology includes a calculation of job accessibility as one of the factors to determine a jurisdiction's draft RHNA allocation. Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute commute (additional details are found in the adopted RHNA methodology). This is not a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents, which can include jobs located outside of the jurisdiction. Over 80 percent of SCAG region workers live and work in different jurisdictions, which calls for an approach to the region's job housing relationship through the measurement of access rather than number of jobs within a certain jurisdiction. As described in Attachment 1, from the City of Bellflower's median TAZ, it will be possible to reach 22.44% of the region's jobs in 2045 within a 30-minute automobile commute (2,255,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs). In fact, Bellflower ranks #2 out of 197 SCAG jurisdictions in job accessibility, second only to the City of Commerce (23.31%). While we understand that the city's jobs housing ratio indicates that there are more housing units than jobs in Bellflower, it remains one of the best cities in the region for accessing jobs within a short commute which are in neighboring jurisdictions. See Attachment 2, Map of Job Accessibility in the City of Bellflower. Limiting a jobs housing balance assessment solely within jurisdictions can effectively worsen a regional jobs housing balance, and thus, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation based on this factor.

Issue 2: Sewer or water infrastructure constraints for additional development [Government Code Section 65584.04(e)(2)(A)].

The City calculates that the water and sewer services required to accommodate their RHNA allocation of 3,726 units equates to 655,778 gallons per day for water and 2,235,600 gallons per day of sewer flows. Water and sewer providers might not have the capacity to accommodate this growth in addition to the growth of neighboring cities without additional infrastructure. Therefore, reducing the City's RHNA allocation would reduce the service demand on water and service providers.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water constraints mentioned by the jurisdiction, it is not evident that the respective water providers have rendered a decision that would prevent the jurisdiction from providing the necessary infrastructure. Costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not penalized for not developing the assigned units. For this reason, SCAG staff does not recommend a housing need reduction based upon this planning factor.

Issue 3: The region's greenhouse gas emissions targets [Government Code Section 65584.04(e)(12)].

The City argues a RHNA allocation of 3,726 new units would prevent the City from achieving the GHG emission targets established by the City's Climate Action Plan (CAP), focusing on the year 2030 and the goal of a 38% reduction by 2030. Using a California Air Pollution Control Officers Association (CAPCOA) formula (900 MT CO₂E/50 unit/year), the City calculates 3,726 new units would result in 67,068 MT/year, thus exceeding the City's GHG significance threshold of 25,000 MT CO₂E/year. This would jeopardize the City's ability to achieve the CAP 2030 GHG emission target and increase harmful air pollutants and energy demand/costs.

SCAG Staff Response: SCAG recognizes the forward-thinking planning of Bellflower's CAP and applauds the City's commitment to GHG reduction. However, while jurisdiction-level GHG reduction efforts are laudable, the statutory objective of RHNA is to promote the achievement of the region's GHG emissions targets as specified by ARB (Government Code § 65584(d)(2)).

Data from Connect SoCal (SCAG's 2020 Regional Transportation Plan and Sustainable Community Strategy) was used to inform how the RHNA methodology furthers this objective. The majority of Bellflower's RHNA allocation stems from its location near future employment. As aforementioned, the median Bellflower resident in 2045 can expect to be able to reach 2,255,000 jobs within a 30-minute drive, which is the second-highest in the region. Since approximately 37% of statewide greenhouse gas emissions are from transportation sources and 21% of travel is job/commute related, additional residential development in places which score high on this measure is a crucial tool toward reducing regional GHG emissions.

The City uses the CAPCOA's CEQA & Climate Change White Paper emissions estimate of 900 metric tons of CO₂ per 50 residential units in order to determine a significant impact. However, CAPCOA's estimate is a suggested threshold that uses single-family housing as a basis and does not consider a wide variety of residential types and development sizes. In fact, on page 43 of CAPCOA's white paper, they state: "if this threshold is preferred, it is suggested that a more robust data set be

examined to increase the representativeness of the selected thresholds.”¹ Furthermore, it is not clear whether this estimate takes into account the proximity of housing with respect to transit and jobs.

Connect SoCal specifically provides a regional plan to reduce travel-related GHG emissions by employing land use policies at the regional level. While SCAG acknowledges that 3,726 new units could increase GHG emissions in the City, planning for this development in a manner that is consistent with the development patterns in Connect SoCal would reduce region-wide GHG impacts by placing these units in areas that are close to jobs and transit. In addition, HCD’s regional determination is based in large part on measures of existing need (e.g. overcrowding) rather than regional population growth; as such much of the RHNA allocation intends to accommodate current population. Since Connect SoCal’s modeling of regional travel indicates that Bellflower is one of the best places in the region to access jobs, increased housing stock in Bellflower (compared to elsewhere) would improve regional GHG which is a statutory objective of RHNA. For this reason, SCAG staff does not recommend a reduction to Bellflower’s draft RHNA allocation based on this factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Bellflower had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Bellflower Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for the 2020 Regional Transportation Plan/Sustainable Communities Strategy (2020 RTP/SCS or Connect SoCal) and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Bellflower, the anticipated number of households in 2020 was 23,448 and in 2030 was 23,820 (growth of 372 households). In May 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of Bellflower on the growth forecast was received in October 2018. Following input, household totals

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

were 23,269 in 2020 and 23,306 in 2030 (growth of 37 households), for a reduced household growth during this period of 335 from preliminary growth forecast data.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the Draft RHNA Methodology. The City of Bellflower submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>. As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the Covid-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmDM.scag.ca.gov>. and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities.

SCAG did not receive additional technical corrections from the City of Bellflower from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in

Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need” which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and “existing need,” which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from Connect SoCal’s aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The methodology is described in further detail at: <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Bellflower

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. “existing need”) and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the Covid-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Bellflower received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Bellflower as summarized in the data and calculations in the tables below.

Bellflower city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	31
Percent of households who are renting:	60%
Housing unit loss from demolition (2009-18):	62
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	162
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	22.44%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	2,255,000
Share of region's job accessibility (population weighted):	0.63%
Jurisdiction's HQTAs population (2045):	16,253
Share of region's HQTAs population (2045):	0.16%
Share of population in low/very low-resource tracts:	31.70%
Share of population in very high-resource tracts:	0.00%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Bellflower city	
Forecasted household (HH) growth, RHNA period:	31
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	1
Replacement Need	62
TOTAL PROJECTED NEED:	94
Existing need due to job accessibility (50%)	2654
Existing need due to HQTAs pop. share (50%)	665
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	314
TOTAL EXISTING NEED	3632
TOTAL RHNA FOR BELLFLOWER CITY	3726
Very-low income (<50% of AMI)	1012
Low income (50-80% of AMI)	487
Moderate income (80-120% of AMI)	552
Above moderate income (>120% of AMI)	1675

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 16,253 living within HQTAs, the City of Bellflower represents 0.16% of the SCAG region's HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs

with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on transit accessibility. From the City of Bellflower's median TAZ, it will be possible to reach 22.44% of the region's jobs in 2045 within a 30-minute automobile commute (2,255,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 314 units assigned to the City of Bellflower.

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF BEVERLY HILLS

Hearing Date: January 13, 2021

The City of Beverly Hills has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG’s Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Beverly Hills submits an appeal and requests a RHNA reduction of 1,486 units (of its draft allocation of 3,096 units). The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA methodology for the 6th Cycle RHNA (2021 – 2029) – the flawed RHNA methodology allocates a disproportionate number of units to densely populated urban areas and burdens jurisdictions not experiencing high job growth.
- 2) Availability of land suitable for urban development or for conversion to residential use – the City is built out and has a stable population.
- 3) Changed circumstances. – COVID-19 pandemic has impacted employment, housing and commuting.

Other Issues: The City also challenges the regional determination and include two specific studies (Freddie Mac and Embarcadero Institute). In addition, the City indicates that meeting the RHNA Allocation would result in displacing existing residents.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 13, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna->

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

[abph011321fullagn.pdf?1609982784](https://scag.ca.gov/rhna-abph011321fullagn.pdf?1609982784)). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the adopted Final RHNA Methodology, the City challenges the methodology itself rather than application of the methodology, and no evidence was provided to support an incorrect application of the methodology.
- 2) Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
- 3) Regarding change in circumstance, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

Other: With respect to the City's challenge to the regional determination, the regional determination is outside the scope of the appeals process and does not provide a basis for appeal since the Appeals Board has no authority to modify the regional determination. Finally, finding suitable sites to accommodate a RHNA allocation does not require the demolition of multi-family residences nor the displacement of vulnerable residents; the RHNA Allocation is not a building quota, rather a jurisdiction is required to plan and zone for housing need but is not penalized for not developing the assigned units.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal on the Draft Allocation for the City of Beverly Hills

RECOMMENDED ACTION:

Deny the appeal filed by the City of Beverly Hills to reduce the Draft RHNA Allocation for the City of Beverly Hills by 1,486 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Beverly Hills requests a reduction of its RHNA allocation by 48 percent or 1,486 units (from 3,096 units to 1,610 units) based on the following issues:

- 1) Application of the adopted Final RHNA methodology for the 6th Cycle RHNA (2021 – 2029)
- 2) Availability of land suitable for urban development or for conversion to residential use
- 3) Changed circumstances.

Other Issues: The City also challenges the regional determination and include two specific studies (Freddie Mac and Embarcadero Institute). In addition, the City indicates that meeting the RHNA Allocation would result in displacing existing residents.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Beverly Hill's Draft RHNA Allocation. With respect to Issue 1, no evidence was provided to support an incorrect application of the adopted RHNA methodology. With respect to Issue 2, the availability of land was not demonstrated to be an impediment to meeting the City's Draft RHNA Allocation since the City does not provide evidence that it cannot accommodate housing using other considerations to

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Beverly Hills (Final Determination of Appeals Decisions)

accommodate need. In regard to Issue 3, change in circumstance, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

With respect to the City's challenge to the regional determination, the regional determination is outside the scope of the appeals process and does not provide a basis for appeal since the Appeals Board has no authority to modify the regional determination. Finally, finding suitable sites to accommodate a RHNA allocation does not require the demolition of multi-family residences nor the displacement of vulnerable residents; the RHNA Allocation is not a building quota, rather a jurisdiction is required to plan and zone for housing need but is not penalized for not developing the assigned units.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received Draft RHNA Allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Beverly Hills: 3,096 units

Very Low Income: 1,005 units

Low Income: 678 units

Moderate Income: 601 units

Above Moderate Income: 812 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Beverly Hills. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.

- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].***

The City indicates that it is appealing its Draft RHNA Allocation based on an incorrect application of the adopted Final RHNA Methodology. It states that the adopted 6th cycle RHNA methodology is “flawed” and “creates a vacuum of economic development in areas of the region that are already rich in housing, but struggling to attract jobs and economic development.” The City argues that the methodology allocates a disproportionate number of units to already densely populated urban areas instead of lower populated suburban areas “where growth can more easily be accommodated”. The methodology therefore perpetuates more job growth and creation in urban areas instead of encouraging job growth in outlying areas.

The City also argues that the RHNA methodology “burdens” jurisdictions like Beverly Hills that are not experiencing a high rate of job growth. It argues that the City should not be required to provide additional housing units that are needed due to underproduction of housing from nearby jurisdictions despite job growth of these other jurisdictions.

SCAG Staff Response: SCAG’s final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. Pursuant to Government Code section 65584.05(b)(2), an appellant must show that SCAG failed to determine the share of regional housing need in accordance with the adopted Final RHNA methodology. In other words, an appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD’s regional housing needs determination. Only improper application of the methodology is grounds for an appeal. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction. See also discussion of “Other Issues” below.

With respect to the statutory objectives¹, SCAG used objective measures to advance certain principles, but since local and regional conditions vary tremendously across the state and over time, there are few consistent quantitative standards which can be used to evaluate all aspects of the methodology. Ultimately, however, the RHNA statute vests HCD with the authority to decide whether statutory objectives have been met.

Job accessibility, as measured by the number of jobs accessible by households within a 30-minute drive commute, was one of the main factors in the adopted RHNA methodology. This particular factor emphasized the importance of not confining influences on housing demand that are not restricted to jurisdictional boundaries. As described in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally-reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the Final RHNA Methodology was found by HCD to further the five statutory objectives in large part due to its use of objective factors and as such cannot consider factors differently in one jurisdiction versus another. As noted above, the basis for an appeal for this factor is the *application* of the Final RHNA Methodology and not the RHNA methodology itself, which was a separate but extensive process that involved multiple steps and public involvement leading up to final adoption.

Additionally, the appeal implies that housing should be allocated to less populated areas where they can be “more easily accommodated”. When furthering the RHNA objectives, SCAG balances the various regional goals of its plans, including promoting infill development and improving the intraregional relationship between jobs and housing. Actions to achieve RHNA’s statutory objectives can be challenging, but choosing solutions based solely based on their level of difficulty may end up counterproductive to public policy goals. For these reasons, SCAG staff does not recommend a reduction to the City of Beverly Hill’s Draft RHNA Allocation based on this factor.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

The City of Beverly Hills writes in its appeal that the City is “built out...with little to no urban land for development of housing.” It also indicates that the City has had stable population for the last several decades and that it “has not experienced extensive interest from developers wishing to construct new housing.” The City argues that these factors indicate there is not necessarily the demand that the RHNA allocation suggests.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth.

While the City asserts that it is built out and has little urban land available for development, it does not provide evidence that it is unable to consider underutilization of these sites, increased densities, and other planning tools to accommodate its assigned need. Furthermore, on June 10, 2020, HCD released extensive guidelines for housing element site inventories.² A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs). Specifically, the guidelines indicate that (page 32):

“In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance.”

Furthermore, under Government Code Section 65584.04(g)(2) and (3), the following criteria cannot be a justification for a determination or a reduction in a jurisdiction’s share of the regional housing need:

² See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf

- “(2) Prior underproduction of housing in a city or county from the previous regional housing need allocation.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle”

While the City suggests that there has been a lack of interest in residential development to support a higher RHNA allocation, this argument cannot be used to reduce its Draft RHNA Allocation. Likewise, the City’s argument that its population has been stable over the last several decades cannot be used to reduce its RHNA Allocation. For these reasons, SCAG staff does not recommend a reduction to the City of Beverly Hill’s Draft RHNA Allocation based on this factor.

Issue 3: Changed Circumstances [Government Code 65584.05(b)].

The City argues that the COVID-19 pandemic has had a considerable impact on employment, housing, commuting, and development over the coming years. In its appeal, it also indicates that the pandemic has had an impact on the City’s finances and operations, which it argues will impact the ability of developers to construct new housing units.

Additionally, the City argues that its residential vacancy rates will increase, which “will further reduce demand for new housing units” in the City. It also argues that its vacancy rate of 7% for multi-family units is caused by the pandemic and that because of these and even higher vacancy rates in other areas, a reduction to its draft RHNA allocation should be granted.

SCAG Staff Response: SCAG recognizes that COVID-19 presents unforeseen circumstances and that local governments have been affected by significant unemployment. However, these facts, as presented by the City, do not “merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04.” (Govt. Code § 65584.05(b)(3)). Furthermore, Section 65584.05(b) requires that:

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

SCAG’s Regional Council delayed the adoption of its 2020-2045 RTP/SCS by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth

Forecast Technical Report³ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e., the SCAG's region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region's long-term competitiveness or the region's employment outlook for 2023-2045. As such, SCAG's assessment is that comparable data would not suggest long-range regional employment declines.

The COVID-19 pandemic has had various impacts throughout Southern California; however, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties.

While SCAG does not dispute the City's assertion that its renter vacancy rate is 7%, this statistic alone does not necessarily indicate a reduced demand for housing, particularly if there is a high percentage of cost-burdened households as indicated by the City in another part of its appeal.

Demand for housing as quantified by the RHNA Allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation.

Other Issues:

Regional Determination

The City argues in its appeal that the regional determination provided by the California Department of Housing and Community Development (HCD) is incorrect and based on flawed assumptions, data, and information. As part of its filed appeal the City includes recent reports from the Embarcadero Institute and Freddie Mac to support its argument that the regional determination from HCD was inaccurate and thus the RHNA allocation derived from this is inaccurate for the City as well.

SCAG Staff Response: SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. As discussed above, the regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination.

³ See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579

While the RHNA statute prescribes specific requirements for HCD in determining the regional housing need (e.g., the determination shall be based on population projects produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans), it allows HCD to accept or reject information provided by SCAG with respect to the data assumptions from SCAG's growth forecast or to modify its own assumptions or methodology based on this information. Following SCAG's formal objection filed on September 18, 2019, HCD did not materially change the regional determination, and there are no further mechanisms provided for in the statute to contest their decision. Nevertheless, SCAG has a statutory obligation to complete the remaining steps required in the RHNA process—namely the adoption of a Final RHNA Methodology, issuing a draft RHNA allocation, conducting an appeals process, and issuing Final RHNA Allocations.

A PowerPoint slide deck titled "Double counting in the latest housing needs assessment" was placed on the Embarcadero Institute's website during 2020 (last update September 2020)." Without commenting on the credibility or accuracy of this material, SCAG staff would note that in order for such materials to have been considered by HCD, they would have had to have been submitted by June of 2019. The RHNA statute provides defined timeframes guided by the deadline for the housing element revisions for HCD's RHNA determination and SCAG's Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region's existing and projected housing need pursuant to Section 65584.01 at least two years prior to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This "determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments." Govt. Code § 65584.01(b). HCD begins the process 26 months prior to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the Final RHNA Allocation methodology up to 30 months prior to the scheduled revision. By necessity, the data used for these processes is data available at that time.

Furthermore, the materials presented by the Embarcadero Institute are regional in nature and do not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was applied incorrectly to determine the jurisdiction's share of regional housing need. Because a regional study does not meet this criterion, this study cannot be used to justify a particular jurisdiction's appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

In sum, it would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates.

Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction's Draft RHNA Allocation.

Displacement

The City argues that implementing the Draft RHNA Allocation would cause displacement of a significant number of existing residents within the City. It asserts that the majority of residents in the City reside in multi-family apartments and that the majority of residents in the City are renters. The City also indicates that it has a strong rent stabilization program to ensure existing residents and lower income residents are protected from displacement and large rent increases. According to the City's appeal, 50% of its renters are cost-burdened, meaning they spend more than 30% of their income on rent. Nearly 30% are extremely cost-burdened, meaning they spend more than 50% of their household income on rent. Additionally, the City also has an aging population. In its appeal, the City argues that to accommodate its draft RHNA allocation, it would "cause the demolition of hundreds of multi-family buildings, which, in turn, would cause the displacement of thousands of residents that are currently residing in these buildings." This is because new development in the City are generally luxury units that replace existing lower cost housing. The City also argues that this displacement would make it more difficult to find affordable housing in the City.

SCAG Staff Response: Consideration of the displacement of existing residents is an important issue in housing policy and planning. SCAG staff does not dispute that there is a high percentage of cost-burdened households within the City. However, it is unclear how the planning and zoning for its housing need would automatically require the City to demolish currently existing multi-family buildings and permit market rate units instead or how it would require the displacement of vulnerable residents. As mentioned earlier in this staff report, a jurisdiction is required to use a variety of planning tools to find suitable sites to accommodate its share of regional housing need. There is no requirement for a City to demolish existing units, only permit market rate units, or displace existing residents to meet its housing need.

For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation based on these other issues.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Beverly Hills had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Beverly Hills’ Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁴ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁵ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Beverly Hills, the anticipated number of households in 2020 was 15,056 and in 2030 was 15,572 (growth of 516 households). In June 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of Beverly Hills on the growth forecast was received in October 2018. Following input, household

⁴ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁵ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

totals were 14,979 in 2020 and 15,296 in 2030, for a reduced household growth during this period of 317.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the Draft RHNA Methodology. The City of Beverly Hills submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG not receive additional technical corrections from the City of Beverly Hills from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁶ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁶ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Beverly Hills

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Beverly Hills received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Beverly Hills as summarized in the data and calculations in the tables below.

Beverly Hills city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	262
Percent of households who are renting:	59%
Housing unit loss from demolition (2009-18):	255
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	724
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	17.74%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,782,000
Share of region's job accessibility (population weighted):	0.23%
Jurisdiction's HQTa population (2045):	33,563
Share of region's HQTa population (2045):	0.33%
Share of population in low/very low-resource tracts:	0.00%
Share of population in very high-resource tracts:	100.00%
Social equity adjustment:	180%

Calculation of Draft RHNA Allocation for Beverly Hills city	
Forecasted household (HH) growth, RHNA period:	262
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	9
Replacement Need	255
TOTAL PROJECTED NEED:	526
Existing need due to job accessibility (50%)	975
Existing need due to HQTAs pop. share (50%)	1373
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	222
TOTAL EXISTING NEED	2570
TOTAL RHNA FOR BEVERLY HILLS CITY	3096
Very-low income (<50% of AMI)	1005
Low income (50-80% of AMI)	678
Moderate income (80-120% of AMI)	601
Above moderate income (>120% of AMI)	812

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 33,563 living within HQTAs, the City of Beverly Hills represents 0.33%] of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Beverly Hills’ median TAZ, it will be possible to reach 17.74% of the region’s jobs in 2045 within a 30-minute automobile commute (1,782,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 222 units assigned to the City of Beverly Hills.

Please note that the above represents only a partial description of key data and calculations which result in the Draft RHNA Allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF CERRITOS

Hearing Date: January 8, 2021

The City of Cerritos has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Cerritos submits an appeal and requests a RHNA reduction of 129 units (of its draft allocation of 1,774 units). The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle (2021 – 2029):
 - (a) existing need due to job accessibility
 - (b) allocation percentages for each income category
- 2) Availability of land suitable for urban development or for conversion to residential use – low quantity of underused parcels.
- 3) Other: Cerritos asserts that HCD improperly calculated the regional RHNA allocation.

B. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 8, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010821fullagn.pdf?1609455450>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

C. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding the application of the Final RHNA Methodology, the employment data relied upon by SCAG was previously verified by City staff. Additionally, regarding the change to the income levels of units, the City's Draft RHNA Allocation, including the final calculation of income levels, was conducted pursuant to the Final RHNA Methodology and in a fair and consistent manner across all local jurisdictions.
- 2) Regarding land suitable for urban development or for conversion to residential use, the City has not provided evidence that it cannot accommodate housing using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
- 3) Other: The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs assessment.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 8, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Cerritos

RECOMMENDED ACTION:

Deny the appeal filed by the City of Cerritos (City) to reduce the Draft RHNA Allocation for the City by 129 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Cerritos requests a reduction of its RHNA allocation by 129 (from 1,903 units to 1,774 units) based on the following issues:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle (2021 – 2029):
 - a. existing need due to job accessibility
 - b. allocation percentages for each income category
2. Availability of land suitable for conversion to residential use – low quantity of underused parcels.

In addition, the City asserts that HCD improperly calculated the regional RHNA allocation.

RATIONALE FOR STAFF RECOMMENDED ACTION:

Staff have reviewed the appeal and recommend no change to the City of Cerritos’ RHNA allocation. Regarding Issue 1a, the City proposes an alternative data source to calculate job accessibility which would yield a modest reduction in job accessibility in Cerritos; however, the employment data relied upon by SCAG was previously verified by city staff. Regarding Issue 1b, Cerritos requests a minor change to the income levels of units in its RHNA allocation; however, the City’s Draft RHNA Allocation was determined to be consistent with the Final RHNA Methodology. Regarding Issue 2, the City has not provided evidence that lands are unavailable to meet the Draft RHNA Allocation.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Cerritos (Final Determination of Appeals Decisions)

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, the City of Cerritos received its Draft RHNA Allocation on September 11, 2020. A summary is below.

Total RHNA for the City of Cerritos: 1,903 units

- Very Low Income: 678 units
- Low Income: 344 units
- Moderate Income: 331 units
- Above Moderate Income: 550 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Cerritos. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1a: Adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)] - existing need due to job accessibility.

Cerritos requests an alternative data source be used to assess job accessibility in Cerritos which would reduce the city's level of job accessibility from 21.29% to 19.79%. This would reduce the City's total RHNA allocation by 129 units.

SCAG Staff Response: SCAG appreciates the City's continued engagement in the RHNA process as well as the Bottom-Up Local Input and Envisioning Process. As detailed in Attachment 1 below, SCAG and the City of Cerritos engaged in extensive communication regarding input data for Connect SoCal, including current and future employment.

As detailed in Connect SoCal's Demographics and Growth Forecast Technical Report¹, SCAG utilizes numerous data sources to develop jurisdiction-level growth forecasts, including the American Community Survey (ACS), the state Employment Development Department (EDD), and business establishment-level data from InfoGroup. SCAG's preliminary employment forecasts for Cerritos were 38,953 in 2016 and 40,849 in 2045.

Following their review, the City of Cerritos recommended reducing its 2045 employment outlook to 39,183 jobs. A data input and verification form was signed by City Manager Art Gallucci on September 17, 2018 and returned to SCAG with this update (attached). This is the employment figure used in Connect SoCal and referenced in Cerritos' appeal as being too high. Cerritos proposes an alternative source of data better reflects the City's true level of employment: the American Community Survey (ACS) 5-year estimate (2012-2016) of 34,850 workers.

Cerritos acknowledges that the RHNA methodology is based on the jobs which are accessible from Cerritos (21.29% of the region's employment in 2045, or 2,139,000 million jobs²) rather than the number of jobs in the city itself. However, since Cerritos' alternative proposed data source indicates about 4,200 fewer jobs in Cerritos, that would slightly decrease the number of jobs *accessible* to residents of Cerritos (to 2,135,000 jobs, or 21.25% of the region's employment in 2045). Cerritos suggests that this alternative data source would merit a 1.5% reduction in the job access share to 19.79%.

While the requested change is relatively modest (6.7% of the draft allocation), SCAG staff cannot recommend this change. The current and future employment totals for Cerritos used in Connect SoCal are not only based on more recent and comprehensive data but they were formally agreed to by SCAG and Cerritos during the Bottom-Up Local Input and Envisioning Process.

¹ https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf

² Based on Connect SoCal's 2045 regional employment forecast of 10,049,000 jobs.

Issue 1b: Adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05(b)(2)] - allocation for each income category is incorrect when based on the social equity adjustment formula.

Cerritos notes that the Draft RHNA Allocation's distribution of housing units across the four income categories differs from the calculation referenced in the RHNA methodology as a result of the "normalization adjustment" which was applied by SCAG in order to ensure that housing unit totals by income category match HCD's regional determination. Cerritos notes that this adjustment noticeably skewed Cerritos' allocation and requests that the original adjustment using the formula referenced in the methodology be used directly.

SCAG Staff Response: To further the objectives of allocating a lower proportion of households by income and affirmatively furthering fair housing (AFFH), the RHNA methodology includes a minimum 150 percent social equity adjustment and an additional 10 to 30 percent added in areas with significant populations that are defined as very low or very high resource areas, referred to as an AFFH adjustment. A social equity adjustment ensures that jurisdictions accommodate their fair share of each income category. It does so by adjusting current household income distribution in comparison to county distribution. The result is that jurisdictions that have a higher concentration of lower income households than the county will receive lower percentages of RHNA for the lower income categories.

After determining the social equity adjustment for each local jurisdiction, SCAG needed to apply a normalization adjustment to ensure that the regional total by income category matched the totals indicated in HCD's regional determination (attached).

Per statute, and following the direction of the SCAG Regional Council, the final RHNA methodology integrates a wide range of policy factors. Unlike in past cycles, HCD did not provide a range of values for the regional determination. In order to avoid allocating housing units to local jurisdictions in excess of the already high figure of 1,341,827 units, SCAG used the precise number called for by HCD.

However, there is the possibility of some mathematical imbalance in the social equity adjustment which results in the small percentage differences by income category noted by Cerritos. Following the percentages in the social equity adjustment without any normalization results in allocating 3.3% too many above-moderate income units and 4.8% too few very-low income units region-wide. The normalization process proportionately reallocates this small discrepancy across all jurisdictions in the region and also ensures that cities are allocated whole number values rather than fractions of housing units. As Cerritos notes, this discrepancy results in an increase in 28 very-low income units (1.4%), and a decrease in 2 moderate-income units (0.1%), a decrease in 1 low-income unit (0.0%), and a decrease in 25 above-moderate income units (1.3%).

While this normalization adjustment was not discussed in as much detail as other aspects of the RHNA methodology, it was included on page 17 of the adopted final RHNA methodology and the formula itself was available in the Excel-based RHNA estimate tool posted online. Since the final calculation of income levels was conducted pursuant to the final RHNA methodology and in a fair and consistent manner across all local jurisdictions, staff does not recommend adjusting Cerritos' draft RHNA allocation accordingly.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City argues that it is built out and developed, with very few vacant sites that are suitable for land development. It also suggests that that e-commerce coupled with displacement of existing commercial, office, and industrial uses to accommodate housing will negatively impact job growth and may further reduce Cerritos' employment by 2045.

SCAG Staff Response: Per Government Code Section 65584.04(e)(2)(B), SCAG is not permitted to limit its consideration of suitable housing sites or land suitable for urban development to a jurisdiction's existing zoning and land use policies and restrictions (which includes the land use policies in its General Plan). "Available land suitable for urban development or conversion to residential use," as expressed in 65584.04(e)(2)(b), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of 'available' land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

"In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land." (HCD Letter at p. 2).

As such, the City can consider other opportunities for development including the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to allocate RHNA need. Per the adopted RHNA methodology, RHNA need is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

As part of the Bottom-Up Local Input and Envisioning Process, SCAG included a draft map which used a rudimentary, region-wide approach to highlight potential infill or refill opportunities based on largely on property value. These were included for research purposes and were not used for growth forecasting or RHNA allocation purposes.

SCAG's growth forecast appreciates and integrates future uncertainty surrounding the nature of employment and conducted extensive analysis on e-commerce and "gig" work. However, the nature of an RTP/SCS is that a future employment total reflecting the most likely future scenario must be used for modeling and forecasting purposes. As described in Attachment 1 and illustrated by SCAG's revision to Connect SoCal based on Cerritos' requested change, this total was developed and reviewed with extensive local input. Cerritos does not request a specific reduction in its Draft RHNA Allocation on this basis; staff does not recommend any adjustment.

Other: *In addition to the issues raised above which are the bases for an appeal, Cerritos also asserts that HCD improperly calculated SCAG's regional housing need determination of 1,341,827 units for the 6th cycle of RHNA.*

SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs assessment. Only improper application of the methodology is grounds for an appeal. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction.

SCAG's development of a consultation package to HCD regarding the regional housing needs determination took place during the first half of 2019. During this time SCAG extensively reviewed a wide range of reports which commented on housing needs in the state and region, including studies from USC, UCLA, UC-Berkeley, the California Legislative Analyst's Office, Beacon Economics, McKinsey, the Center for the Continuing Study of the California Economy, and others. These studies covered a wide range of approaches and methodologies for understanding housing need in the region and state. On March 27, 2019 SCAG convened a panel of fifteen experts in demographics, economics, and housing planning to assess and review the region's housing needs in the context of SCAG's regional determination.

Notwithstanding the merits of the various approaches toward estimating regional housing need, state statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow sufficient time for the development of a methodology, appeals, and local housing element updates.

During both the consultation process and the filing of SCAG’s formal objection to HCD’s regional determination, SCAG extensively reviewed the issues brought up in these recent reports including a variety of indicators of housing backlog such as cost burden, overcrowding, demolition, and vacancy. In addition, SCAG has a well-developed program for forecasting population and household growth in the region which is conducted with the advice and collaboration of the state Department of Finance’s forecasting staff. SCAG assessed the relationship between the measures used and not used in its analyses in order to avoid overlap (“double counting”).

A PowerPoint slide deck titled “Double counting in the latest housing needs assessment” was placed on the Embarcadero Institute’s website during 2020 (last update September 2020).” Without commenting on the credibility or accuracy of this material, SCAG staff would note that in order for such materials to have been considered by HCD, they would have had to have been submitted by June of 2019. The RHNA statute provides defined timeframes guided by the deadline for the housing element revisions for HCD’s RHNA determination and SCAG’s Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region’s existing and projected housing need pursuant to Section 65584.01 at least two years prior to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This “determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” Govt. Code § 65584.01(b). HCD begins the process 26 months prior to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the RHNA allocation methodology up to 30 months prior to the scheduled revision. By necessity, the data used for these processes is data available at that time.

Furthermore, the materials presented by the Embarcadero Institute are regional in nature and do not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was applied incorrectly to determine the jurisdiction’s share of regional housing need. Because a regional study does not meet this criterion, these studies cannot be used to justify a particular jurisdiction’s appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

In sum, it would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates. Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction’s draft RHNA allocation. For

these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

5. Comments Received During the Comment Period (General)

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Cerritos had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Cerritos' Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.³ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁴ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG's preliminary growth forecast information. For the City of Cerritos, the anticipated number of households in 2020 was 15,571 and in 2030 was 15,814 (growth of 243 households). In May 2018, SCAG staff met with staff from the City of Cerritos to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from Cerritos on the growth forecast was received on September 17, 2018 in the form of a Data Input and Verification

³ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁴ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Form signed by City Manager Art Gallucci (attached). This indicated a household total of 15,467 in 2020 and 15,507 in 2030, for a revised level of household growth of 40 units during this period.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Cerritos submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions

were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmdm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of Cerritos which differed from the Growth Vision in late 2019 or summer 2020.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁵ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁵ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Cerritos

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Cerritos received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Cerritos as summarized in the data and calculations in the tables below.

Cerritos city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	33
Percent of households who are renting:	21%
Housing unit loss from demolition (2009-18):	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	105
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	21.29%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	2,139,000
Share of region's job accessibility (population weighted):	0.39%
Jurisdiction's HQTAs population (2045):	1,770
Share of region's HQTAs population (2045):	0.02%
Share of population in low/very low-resource tracts:	0.03%
Share of population in very high-resource tracts:	77.47%
Social equity adjustment:	160%

Calculation of Draft RHNA Allocation for Cerritos city	
Forecasted household (HH) growth, RHNA period:	33
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	1
Replacement Need	-
TOTAL PROJECTED NEED:	34
Existing need due to job accessibility (50%)	1636
Existing need due to HQTAs pop. share (50%)	72
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	161
TOTAL EXISTING NEED	1870
TOTAL RHNA FOR CERRITOS CITY	1903
Very-low income (<50% of AMI)	678
Low income (50-80% of AMI)	344
Moderate income (80-120% of AMI)	331
Above moderate income (>120% of AMI)	550

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 1,770 living within HQTAs, Cerritos represents 0.02% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Cerritos’ median TAZ, it will be possible to reach 21.29% of the region’s jobs in 2045 within a 30-minute automobile commute (2,139,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 161 units assigned to the City of Cerritos.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF CHINO HILLS

Hearing Date: January 6, 2021

The City of Chino Hills has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Chino Hills submits an appeal and requests a RHNA reduction of 1,797 units (of its draft allocation of 3,720 units). The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - the 6th Cycle Draft RHNA allocation relies on flawed TAZ data to establish commute times and miscalculates Chino Hills' existing need due to job accessibility share and the fact that there are no High Quality Transit Areas (HQTAs) in the City.
- 2) Existing or projected jobs-housing balance –job accessibility was miscalculated.
- 3) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans – the City does not have HQTAs.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 6, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010621fullagn.pdf?1609379165>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

B. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding the application of the adopted Final RHNA Methodology, SCAG adhered to its Connect SoCal Growth Vision process in finalizing forecasted growth at the TAZ level, which did result in adjustments to TAZ-level data for the City of Chino Hills. The City of Chino Hills was notified of two opportunities to provide feedback on TAZ-level growth forecast data. SCAG did not receive comments from the City following these notices and thus relied on the adjusted TAZ data.
- 2) Regarding existing or projected jobs-housing balance, Chino Hills' employment data was previously verified by City staff and the commute time-based measures raised by the City are not used in the job accessibility measure, which was adopted by the Regional Council as part of the final 6th cycle RHNA methodology.
- 3) Regarding distribution of household growth assumed for purposes of comparable Regional Transportation Plans, the adopted final RHNA methodology uses population in planned 2045 HQTAs as one determinant of housing need. While there is currently no HQTA in Chino Hills, SCAG has confirmed that the transit projects which result in this HQTA are anticipated to be operational by 2045.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 6, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Kevin Kane, Senior Regional Planner,
(213) 236-1828, kane@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Chino Hills

RECOMMENDED ACTION:

Deny the appeal filed by the City of Chino Hills (the City) to reduce the Draft RHNA Allocation for the City by 1,797 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Chino Hills requests a reduction of its RHNA allocation by 1,797 units (from 3,720 units to 1,923 units) based on the following issues:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029)
- 2) Existing or projected jobs-housing balance
- 3) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans

The City asserts that the revisions to its allocation are necessary to correct inaccuracies and further the intent of the objectives of Government Code Section 65584(d).¹

¹ The five RHNA objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households. 2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reduction targets as established by the California Air Resources Board pursuant to Section 65080. 3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. 4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. 5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Chino Hills (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Chino Hills’ draft RHNA allocation. The City contends that the 6th Cycle Draft RHNA allocation relies on flawed TAZ data to establish commute times and miscalculates Chino Hills’ existing need due to job accessibility share and the fact that there are no High Quality Transit Areas (HQTAs) in the City.

SCAG adhered to its Connect SoCal Growth Vision process in finalizing forecasted growth at the TAZ level, which did result in adjustments to TAZ-level data for the City of Chino Hills. The City of Chino Hills was notified of two opportunities to provide feedback on TAZ-level growth forecast data on October 31, 2019 and May 26, 2020. SCAG did not receive comments from the City following these notices and thus relied on the adjusted TAZ data.

The City requests a reduction in its draft RHNA allocation due to a miscalculation of the job accessibility share; however Chino Hills’ employment data was previously verified by city staff and the commute time-based measures raised by the city are not used in the job accessibility measure, which was adopted by the Regional Council as part of the final 6th cycle RHNA methodology.

Chino Hills also requests a reduction based on a claim that the city does not have HQTAs; however, the adopted final RHNA methodology uses population in planned 2045 HQTAs as one determinant of housing need. While there is currently no HQTA in Chino Hills, SCAG has confirmed that the transit projects which result in this HQTA are anticipated to be operational by 2045.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

- Total RHNA for the City of Chino Hills: 3,720 units
 - Very Low Income: 1,384 units
 - Low Income: 819 units
 - Moderate Income: 787 units
 - Above Moderate Income: 730 units

Additional background related to the Draft RHNA Allocation for the City of Chino Hills is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Chino Hills. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from cities in the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: The City contends that SCAG failed to correctly apply the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)].

Chino Hills contends that the Final RHNA Methodology was incorrectly applied to the City because the underlying transportation analysis zone (TAZ) data is flawed. They specify that TAZ 1432 is comprised of Chino Hills State Park, over which the City has no jurisdiction, is erroneously assigned a TAZ population of 7,944 for the year 2016 and 10,525 for the year 2040.

SCAG Staff Response: SCAG was not able to find any record of a TAZ 1432. The TAZ that includes Chino Hills State Park, in addition to a portion of the City's urbanized area, which is likely referenced by the City, is TAZ 53609100. The Bottom-Up Local Input and Envisioning Process requested population data for 2016, 2020, 2030, 2035, and 2045. 2040 was not included and no 2040 figures were used. While this TAZ does consist of state park land, it also includes an existing population of 7,944 individuals and 2,276 households in the base year of 2016. Chino Hills submitted a data input verification form on October 16, 2018 that included local jurisdiction growth in addition to TAZ-level growth following a local input meeting between SCAG staff and City of Chino Hills staff in March 2018. During the Connect SoCal Growth Vision process, SCAG made revisions to TAZ-level growth, adding approximately 600 households to TAZ 53609100. SCAG then provided Chino Hills with two opportunities on October 31, 2019 and May 26, 2020 to provide responses to this adjustment. The local input and Growth Vision processes are described in detail in Attachment 1. SCAG did not

receive feedback or technical corrections by the final deadline on June 9, 2020. Therefore, SCAG used the data developed through the Growth Vision process.

Issue 2: The City contends that SCAG failed to adequately consider information related to existing or projected jobs-housing balance [Government Code Section 65584.04(e)(1)].

Government Code Section 65584.04(e)(1)] indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

Each member jurisdiction's existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

Chino Hills challenges SCAG's calculation of job accessibility. SCAG's "Profile of City of Chino Hills" (May 2019) cites 16,647 commuters in Chino Hills, 65.3% of whom spend more than 30 minutes traveling to work, and 34.7% of whom spend 30 minutes or less traveling to work. The Connect SoCal Plan does not include improvements to the main highways in Chino Hills (SR-71, SR-142, SR-60 and SR-91), therefore commute times are not expected to improve by 2045 and may be expected to increase with the development of additional housing. The City proposes that their regional share of existing need due to job accessibility should be reduced by 65.3% to reflect the fact that 65.3% of commuters in Chino Hills have travel times of over 30 minutes (resulting in a reduction of 910 units, from 1,393 units to 483 units).

SCAG Staff Response: The adopted RHNA methodology includes a calculation of job accessibility as one of the factors to determine a jurisdiction's draft RHNA allocation. Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute commute (additional details are found in the adopted RHNA methodology). This is **not** a measure of the travel times of existing commuters within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents, which can include jobs outside of the jurisdiction. Over 80 percent of SCAG region workers live and work in different jurisdictions, which calls for an approach to the region's job housing relationship through the measurement of access rather than number of jobs within a certain jurisdiction. Limiting a jobs housing balance assessment solely within a jurisdiction's boundaries can effectively worsen a regional jobs housing imbalance and thus SCAG staff does not recommend a reduction to the City of Chino Hills draft RHNA allocation based on this factor.

Issue 3: The City contends that SCAG failed to adequately consider information related to distribution of household growth assumed for purposes of comparable regional Transportation Plans [Government Code Section 65584.04(e)(3)].

Government Code Section 65584.04(e)(3) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

Chino Hills contends that the City does not have HQTA areas that facilitate access to jobs and does not have the existing or planned highway capacity to ensure reasonable commute times (30 minutes or less) to employment centers. Placing additional housing in Chino Hills based on incorrect data does not promote improve intraregional jobs/housing balance nor will it improve the balance between the number of low-wage jobs and the number of affordable housing units in Chino Hills. The City further claims that “SCAG does not provide the data to support this assignment, and in fact there is no data that can support it.”

SCAG Staff Response: The adopted final RHNA methodology includes a component that calculates need based on a jurisdiction’s population within a high-quality transit areas (HQTA).

For planning and SCS purposes, SCAG identifies a ‘High Quality Transit Area’ as generally a walkable transit village or corridor that is within one-half mile of a major transit stop or ‘High Quality Transit Corridor’ (HQTC) as defined in Government Code 21155(b) and 21064.3 excluding freeway transit corridors with no bus stops on the freeway alignment. (See also Appendix 1 of the Connect SoCal Technical Report: Transportation System – Transit).² SCAG’s technical methodology for identifying HQTCs and major transit stops is based on input from the Regional Transit Technical Advisory Committee (RTTAC), as well as consultation with local agencies, other large MPOs in California, and the Governor’s Office of Planning and Research.

Planned HQTCs and major transit stops are future improvements that are expected to be implemented by transit agencies by the RTP/SCS horizon year of 2045. These are assumed by definition to meet the statutory requirements of an HQTC or major transit stop. SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years. However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG and as such it is understood that planned transit projects are subject to further project-specific evaluation, but that is the nature of the long range planning process. While there is an inherent chance that transit agencies may change future

² https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_transit.pdf?1606002122

plans, ultimately SCAG's adopted final RHNA methodology uses this definition of 2045 HQTAs in order to better align future housing with anticipated future transit.

The adopted RHNA methodology considers the Connect SoCal Growth Forecast in assigning population to planned (2045) HQTAs. This methodology ensures that the RHNA component of population within HQTAs results in a direct linkage to the regional transportation plan, strengthening the consistency between these two planning processes. Using the calculation from the RHNA methodology, the City of Chino Hills was assigned a need of 888 based on population within planned (2045) HQTAs. A map of planned (2045) HQTAs within the jurisdiction is attached to this staff report. The planned (2045) HQTA in Chino Hills is a transit corridor project consisting of an Express Bus on Grand/Edison from Chino Hills Parkway to Eastvale that SBCTA submitted to SCAG, listed in the Project List as planned RTP project #4120211. This is not a new project, and this corridor was also identified as a planned HQTC in the 2016 RTP. This information was available for public review following the release of the draft Connect SoCal plan in November 2019. Details can be found in the Connect SoCal Public Participation and Consultation Technical Report. SCAG staff does not recommend a reduction to its Draft RHNA Allocation based on this planning factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Chino Hills had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Chino Hills’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.³ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁴ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Chino Hills, the anticipated number of households in 2020 was 24,723 and in 2030 was 27,129 (growth of 2,406 households). In March 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of Chino

³ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁴ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at: <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Hills on the growth forecast was received in October 2018. Following input, household totals were 24,418 in 2020 and 25,868 in 2030, for a reduced household growth during this period of 956.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), 'Affirmatively Furthering Fair Housing' (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Chino Hills submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to achieve Southern California's GHG reduction targets, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections may be accessed at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management (SPM-DM) site: <http://spmDM.scag.ca.gov>. Updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of Chino Hills which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low- income households.*
- 2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- 3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- 4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- 5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on

November 7, 2019 and provide it to the California Department of Housing and Community Development (HCD) for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need”, which includes the number of housing units required to accommodate anticipated population growth over the eight-year RHNA planning period and, “existing need”, which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.⁵ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and ‘High Quality Transit Area’ (HQTA) population based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from Connect SoCal’s aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁵ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. “existing need”) and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at:

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

3. Draft RHNA Allocation for the City of Chino Hills

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Chino Hills received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Chino Hills as summarized in the data and calculations in the tables below.

Chino Hills city statistics:		<i>Regional Percentile:</i>
Forecasted household (HH) growth, RHNA period:	1196	65%
Percent of households who are renting:	23%	12%
Housing unit loss from demolition (2009-18):	3	40%
Adj. forecasted household growth, 2020-2045:*	3,763	-
Pct. of regional jobs accessible in 30 mins (2045):**	9.78%	43%
Share of region's job accessibility (pop-weighted):	0.33%	67%
Share of region's HQT population (2045)	0.21%	66%
Share of pop. in low/very low-resource tracts:	0.00%	-
Share of pop. in very high-resource tracts:	99.51%	-
Social equity adjustment:	180%	-

RHNA Allocation inputs for Chino Hills city		
Forecasted household (HH) growth, RHNA period:	1196	
Vacancy Adjustment	28	
Replacement Need	3	
TOTAL PROJECTED NEED:	1227	
Existing need due to job accessibility (50%)	1393	
Existing need due to HQTAs pop. share (50%)	888	
Net residual factor for existing need [^]	212	
TOTAL EXISTING NEED	2493	
TOTAL RHNA FOR CHINO HILLS CITY	3720	<i>Pct of total</i>
Very-low income (<50% of AMI)	1384	37.2%
Low income (50-80% of AMI)	819	22.0%
Moderate income (80-120% of AMI)	787	21.2%
Above moderate income (>120% of AMI)	730	19.6%

The transit accessibility measure is based on the population anticipated to live in ‘High Quality Transit Areas’ (HQTAs) in 2045 based on Connect SoCal’s designation of HQTAs and population forecasts. With a forecasted 2045 population of 21,701 living within HQTAs, the City of Chino Hills will represent 0.21 percent of the SCAG region’s total HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute commute time. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate

housing units based on the job accessibility factor. From the City of Chino Hills' median TAZ, it will be possible to reach 12 percent of the region's jobs in 2045 within a 30-minute automobile commute (1,174,000 jobs), based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs. An additional factor is included in the methodology to account for RHNA Objective #5, to 'Affirmatively Further Fair Housing' (AFFH). Several jurisdictions in the region, which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 212 units assigned to the City of Chino Hills.

Please note that the above represents only a partial description of the key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF CHINO

Hearing Date: January 6, 2021

The City of Chino has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

- “(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.
- (5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

- “(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.
- (2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:
 - (A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.
 - (B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Chino submits an appeal and requests a RHNA reduction of 3,564 units (of its draft allocation of 6,961 units). The grounds for appeal are as follows:

- 1) Jobs/housing balance
- 2) Sewer and water infrastructure limitations
- 3) Availability of suitable land for urban development or conversion to residential use
- 4) Lands protected from urban development under existing federal or state programs
- 5) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans
- 6) Regional greenhouse gas emission reduction targets
- 7) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA: Furthering statutory housing equity objectives
- 8) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA: Determining populations located within an HQTAs
- 9) Change in circumstances

A. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 6, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to

the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010621fullagn.pdf?1609379165>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the public hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

1) The jobs-housing balance factor was not demonstrated to be an impediment to meeting Chino's RHNA allocation since jobs-housing balance is evaluated at the regional, not jurisdictional, level.

2) Regarding limitations on the availability of existing water and sewage infrastructure, it is not evident that the water providers have rendered decisions that would prevent the jurisdiction from providing the necessary infrastructure. Also, costs to upgrade and develop appropriate water and sewage infrastructure may not be considered as a justification for a reduction.

3) Regarding the availability of land suitable for urban development or conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.

4) Regarding lands protected from urban development by existing federal or state programs, RHNA requires that other types of land use options be considered in the assessment of housing development opportunities other than existing open space.

5) Regarding distribution of household growth assumed for purposes of comparable Regional Transportation Plans, while SCAG's 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) is informed by data for projected housing need through 2045, the 6th Cycle RHNA assessment includes both projected regional housing need and existing regional housing need.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

6) Regarding regional greenhouse gas (GHG) emission targets, Connect SoCal has demonstrated achievement of all applicable regional GHG emission reduction targets.

7) Regarding application of the adopted Final RHNA Methodology for furthering statutory housing equity objectives, the City's inability to allay the costs associated with the implementation of the equitable distribution of housing supply and its limited land resources available to develop the needed housing units does not provide an eligible basis for appeal since RHNA requires a local jurisdiction only to plan and zone for its determined housing need and does not require a local jurisdiction to develop the allocated units.

8) Regarding application of the adopted Final RHNA Methodology relating to the determination of population residing within an HQTAs, the methodology considers planned future (2045) HQTAs and the City is anticipated to have HQTAs in 2045 based on eligible transit routes projected to be in service on Euclid Avenue and on Edison Avenue.

9) Regarding change in local circumstances, impacts from COVID-19 have not been shown to be long-range; as determined by the Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 6, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Kevin Kane, Senior Regional Planner,
(213) 236-1828, kane@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Chino

RECOMMENDED ACTION:

Deny the appeal filed by the City of Chino (the City) to reduce its draft RHNA allocation from its current allocation of 6,961 units to 3,397 units, a reduction of 3,564 units (51.2 percent).

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Chino requests a reduction of its RHNA allocation of 6,961 residential units based on the following nine issues:

- 1) Jobs/housing balance
- 2) Sewer and water infrastructure limitations
- 3) Availability of suitable land for urban development or conversion to residential use
- 4) Lands protected from urban development under existing federal or state programs
- 5) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans
- 6) Regional greenhouse gas emission reduction targets
- 7) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA: Furthering statutory housing equity objectives
- 8) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA: Determining populations located within an HQTAs
- 9) Change in circumstances

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Chino (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the submitted appeal documentation and recommend no change to the City of Chino RHNA allocation.

Issue 1: The appeal based on the jobs-housing balance factor was not demonstrated to be an impediment to meeting Chino's RHNA allocation since jobs-housing balance is evaluated at the regional, not jurisdictional, level.

Issue 2: The appeal based on limitations on the availability of existing water and sewage infrastructure is not accepted because these conditions have already been accounted for in the RHNA assessment.

Issue 3: The appeal based on the availability of land suitable for urban development or conversion to residential use is not accepted because RHNA requires that the consideration of the availability of land suitable for urban development must include other types of land use opportunities other than vacant land.

Issue 4: The appeal based on lands protected from urban development by existing federal or state programs is not accepted as RHNA requires that other types of land use options be considered in the assessment of housing development opportunities other than existing open space.

Issue 5: The appeal based the distribution of household growth assumed for purposes of comparable Regional Transportation Plans is not accepted because, while SCAG's 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) is informed by data for projected housing need through 2045, the 6th Cycle RHNA assessment includes both projected regional housing need and existing regional housing need.

Issue 6: The appeal based on regional greenhouse gas (GHG) emission targets is not accepted since Connect SoCal has demonstrated achievement of all applicable regional GHG emission reduction targets.

Issue 7: The appeal based on the improper application of the adopted RHNA methodology for furthering statutory housing equity objectives is not accepted because the City's inability to allay the costs associated with the implementation of the equitable distribution of housing supply and its limited land resources available to develop the needed housing units does not provide an eligible basis for appeal since RHNA requires a local jurisdiction only to plan and zone for its determined housing need and does not require a local jurisdiction to develop the allocated units.

Issue 8: The appeal based on the improper application of the adopted RHNA methodology relating to the determination of population residing within an HQTAs is not accepted because the adopted

RHNA methodology considers only planned future (2045) HQTAs and the City is anticipated to have HQTAs in 2045 based on eligible transit routes projected to be in service on Euclid Avenue and on Edison Avenue.

Issue 9: The appeal based on a change in local circumstances is not accepted since no evidence was provided to indicate that the City of Chino is disproportionately burdened by COVID-19 impacts relative the rest of the SCAG region.

BACKGROUND:
Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the draft RHNA allocation for the City of Chino is provided below.

Total RHNA Allocation for the City of Chino: 6,961 units

Very Low Income: 2,107 units
Low Income: 1,281 units
Moderate Income: 1,201 units
Above Moderate Income: 2,372 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Chino. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and

their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: The City contends that SCAG failed to adequately consider information related to existing or projected jobs-housing balance [Government Code Section 65584.04(e)(1)].

Government Code Section 65584.04(e)(1) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

Each member jurisdiction's existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

The jobs/housing balance in the City of Chino would be negatively impacted with the influx of new residential units as provided in the current RHNA allocation. Most Chino residents commute to work in other cities and adding more residential units would increase the discrepancy between housing and jobs in the City.

SCAG Staff Response: Jobs/housing balance is most effectively assessed at a regional scale, extending beyond the boundaries of any individual jurisdiction. Over 80 percent of workers in the SCAG region live and work in different jurisdictions, a figure that accounts for those who work from home. This requires an approach to the region's jobs/housing relationship based on an assessment of access to regional jobs rather than on the number of jobs located within a particular jurisdiction. Limiting the scope of a jobs/housing balance evaluation to an individual jurisdiction's boundaries may effectively worsen a regional jobs/housing imbalance. Therefore, SCAG staff does not recommend a reduction to the City of Chino's draft RHNA allocation based on this factor.

Issue 2: The City contends that SCAG failed to adequately consider information related to sewer and water infrastructure constraints [Government Code Section 65584.04(e)(2)(A)].

Government Code Section 65584.04(e)(2)(A) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water

service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

Sewer and water infrastructure limitations within the City of Chino are not conducive to the development of the number of new housing units currently allocated through RHNA. Many of the water and sewage utility agencies that serve Chino residents are located outside of the City, and Chino has limited control over the infrastructure expansion decisions made by these external agencies.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water constraints mentioned by the jurisdiction, it is not evident that the respective water providers have rendered decisions that would prevent the jurisdiction from providing the necessary infrastructure. In addition, costs to upgrade and develop appropriate water and sewage infrastructure may not be considered by SCAG as a justification for a reduction since the RHNA allocation only requires a jurisdiction to plan and zone for its determined housing need and is not required to actually develop the allocated units. For these reasons, SCAG staff does not recommend a housing need reduction based upon this planning factor.

Issue 3: *The City contends that SCAG failed to adequately consider information related to availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].*

Government Code Section 65584.04(e)(2)(B) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality but shall consider the potential for increased residential development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

The City of Chino has limited availability of suitable land for urban development or conversion to residential use. Development of the small amount of existing open space within the City is largely curtailed by flood control restrictions, freeway right of way, institutional use, and aviation safety requirements.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(b), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth. For these reasons, SCAG staff does not recommend a reduction to the City of Chino’s RHNA allocation based on this factor.

Issue 4: The City contends that SCAG failed to adequately consider information related to lands protected from urban development under existing federal or state programs [Government Code Section 65584.04(e)(2)(C)].

Government Code Section 65584.04(e)(2)(C) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to non-agricultural uses.

There are undeveloped lands within the City of Chino that are protected from urban development under existing federal or state programs. Specifically, the City includes areas that are designated as flood plain zones and wildlife habitat preservation areas. These conditions restrict the City's ability to develop the housing allocated by RHNA.

SCAG Staff Response: It is presumed that planning factors such as lands protected by federal and state programs have already been accounted for prior to the local input submitted to SCAG since such factors are required to be considered at the local level. No evidence was submitted in the appeal that indicates that the status of these areas has changed since the most current input provided in 2018. In addition, while the City of Chino has indicated it cannot accommodate units in these specific areas, sufficient evidence has not been provided to indicate that the City may not accommodate its RHNA allocation in other areas. The presence of protected open space alone does not reduce housing need nor does it preclude a jurisdiction from accommodating its housing need elsewhere. For these reasons, SCAG staff does not recommend a reduction to the City of Chino's RHNA allocation based on this factor.

Issue 5: *The City contends that SCAG failed to appropriately apply the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)] and that SCAG failed to adequately consider information related to distribution of household growth assumed for purposes of comparable Regional Transportation Plans [Government Code Section 65584.04(e)(3)].*

The City of Chino's draft allocation of 6,961 units over the eight-year RHNA planning period is more than twice the number of new units (3,437) forecasted in the 2020 RTP/SCS for the City through the year 2030. This more than doubling of the number of housing units required to be developed will have an impact on the RTP/SCS as it relates to existing infrastructure not only in the City of Chino, but throughout San Bernardino County.

SCAG Staff Response: The appeal based the distribution of household growth assumed for purposes of comparable Regional Transportation Plans is not accepted because, while SCAG's 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal) is informed by data for projected housing need through 2045, the 6th Cycle RHNA assessment includes both projected regional housing need and existing regional housing need. Projected need is intended to accommodate expected growth of population and households, while existing need reflects the latent housing demand of the current regional population. SCAG has allocated both projected housing need and existing housing need in a manner that is consistent with the development pattern defined by Connect SoCal. The 'projected need' element of the 6th Cycle RHNA is specifically based on the regional development pattern defined in Connect SoCal. The 'existing need' allocation element of RHNA, though not part of Connect SoCal, is also consistent with the Connect SoCal development pattern. SCAG's adopted RHNA methodology allocates 'existing need'

based on factors related to transit and job accessibility. Accordingly, existing need is aligned with the strategies and policies underlying the development pattern in the SCS. In summary, SCAG has allocated total regional housing need (both 'existing need' and 'projected need') consistent with the regional development pattern defined in Connect SoCal. Therefore, SCAG staff does not recommend a reduction to Chino's draft RHNA allocation based on this factor.

Issue 6: The City contends that SCAG failed to adequately consider information related to the region's greenhouse gas (GHG) emission reduction targets [Government Code Section 65584.04(e)(12)]:

Government Code Section 65584.04(e)(12) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

Achievement of regional GHG emission targets will be negatively impacted by the current RHNA allocation for the City of Chino. Adding new housing units in areas where there are no available jobs will result in increased VMT and GHG emissions.

SCAG Staff Response: The 6th cycle RHNA does not change the regional population forecast from Connect SoCal either in 2029 (end of RHNA period) or for any other year during the Connect SoCal growth forecast, including 2035 for which Connect SoCal is required to meet the applicable regional GHG emissions reduction target. While RHNA would require housing units to address existing need over its eight-year planning period, in addition to the growth forecast to address projected need, those additional housing units are intended to serve the existing population and would, therefore, not result in additional regional GHG emissions as argued by the City in its appeal. Since the allocation methodology for existing need is based on transit and job accessibility, it promotes a more efficient development pattern in utilizing public transit, reducing commute distance, and contributing to reduction in regional per capita GHG emissions.

In fact, increasing housing opportunities in location efficient areas is a primary strategy in Connect SoCal for reducing regional GHG emissions. Location efficiency refers to areas where single occupancy vehicle travel is minimized as a result of being near high quality transit amenities or being located near high demand travel destinations, including major employment centers. Correspondingly, RHNA allocations are assigned to jurisdictions based on job accessibility and transit accessibility. Job accessibility is measured as jobs accessible to a jurisdiction's residents within a 30-minute commute based on the number and location of jobs in 2045 as determined by the SCAG Regional Growth Forecast. Transit accessibility is measured by a jurisdiction's share of

regional population that reside within an HQTAs using the 2045 Growth Forecast population projections and the HQTAs locations used for Connect SoCal.

Given the more efficient development pattern, per capita GHG emissions would be reduced in a manner that is consistent with the SCS for meeting the regional GHG emissions targets established by CARB. For this reason, SCAG staff does not recommend a reduction to the City of Chino's draft RHNA allocation based on this factor.

Issue 7: The City contends that SCAG failed to appropriately apply the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)] and that SCAG failed to adequately consider local factors information related to the statutory housing equity objectives in Government Code Section 65584(d)(1)-(3).

Government Code Section 65584(d)(1)-(3) indicates that the RHNA shall further each of the following objectives:

- 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low- income households.*
- 2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- 3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*

The RHNA allocation for the City of Chino would negatively impact the objective of increasing the supply and mix of housing supply in an equitable manner due to the lack of available funding for the development of the allocated affordable housing units. The City has limited ability to develop affordable housing at the allocated number of units due to lack of funding for affordable housing and the loss of redevelopment funding. There is a lack of available land (over 100 acres would be needed) to accommodate the allocated number of affordable units based on default densities and number of required units. The requirement for the City to comply with the no-net loss law (SB 166) may result in land not being developed for either low-income housing or housing at higher densities due to the lack of replacement land if market-rate housing is desired on specific parcels of land. This

may result in land remaining undeveloped for any type of housing. Furthermore, the areas with available land could result in the affordable units being concentrated in one area of the City and not disbursed in an equitable manner throughout the City.

SCAG Staff Response: Costs incurred to develop and construct the allocated new housing units within a jurisdiction may not be considered by SCAG as a justification for a RHNA reduction since the RHNA allocation does not provide a building quota or mandate. A local jurisdiction is only required to plan and zone for its determined housing need and is not required to develop the allocated units.

Issue 8: The City contends that SCAG failed to appropriately apply the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) in regard to the allocation of existing need. The distribution of household growth was improperly applied for the City of Chino, specifically regarding population living within 'High Quality Transit Areas' (HQTAs). The City does not currently include any areas that may be properly designated as an HQTA as defined in the SCAG RTP/SCS.

SCAG Staff Response: The RHNA existing need allocation is assigned to jurisdictions based on job accessibility and transit accessibility. Job accessibility is measured as the number of regional jobs accessible to a jurisdiction's residents within a 30-minute commute, based on the number and location of jobs in 2045 from the Growth Forecast. Transit accessibility is measured as a jurisdiction's share of the total regional population residing within an HQTA in 2045 using the 2045 population projections from the Growth Forecast and the HQTA locations used in support of Connect SoCal. The adopted RHNA methodology considers only planned future (2045) HQTAs. While the City currently has no designated HQTAs, Connect SoCal indicates that in the future the City will have HQTAs, with eligible transit routes expected to be in service on Euclid Avenue and on Edison Avenue in the City of Chino by 2045. For this reason, SCAG staff does not recommend a reduction to the City of Chino's draft RHNA allocation based on this factor.

Issue 9: The City contends that SCAG failed to consider changed circumstances [Government Code 65584.05(b)].

The COVID-19 pandemic has resulted in potentially significant unknown changes in circumstances to the development of housing throughout California. Creating more housing, likely at higher densities for affordable housing, may present a challenge due to needs for social distancing and other concerns related to disease spread. The nature of work and the types of jobs available may also have long-ranging impacts on housing allocation and transportation infrastructure in the region.

SCAG Staff Response: The COVID-19 pandemic has produced many impacts throughout the SCAG region. However, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in demand for housing or housing need. Southern California home prices continue to

increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation is reflective of need that covers an eight-year period and is not impacted by immediate near-term circumstances.

SCAG's Regional Council delayed adoption of the 2020-2045 RTP/SCS (Connect SoCal) by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, Connect SoCal's long-range (2045) forecast of population, employment, and household growth remained unchanged. The Connect SoCal 'Demographics and Growth Forecast' Technical Report¹ outlines the process for forecasting long-range employment growth, which involves the evaluation of national growth trends and regional economic competitiveness factors, including the SCAG region's share of national employment growth. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changing the region's long-term economic competitiveness or its employment outlook for 2023-2045. As such, SCAG's assessment is that comparable data does not suggest long-range regional employment impacts due to the pandemic.

Moreover, impacts from COVID-19 are not unique to any individual jurisdiction in the SCAG region, and no evidence has been provided in the appeal to indicate that housing need within the City of Chino is disproportionately impacted relative to the rest of the SCAG region. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation in response to this factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY 2020-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment describes the nature and timing of the opportunities provided to the City of Chino to offer information and local input on SCAG’s growth forecast, the draft RHNA methodology, and the Growth Vision in support of SCAG’s 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal). It also describes how the RHNA methodology development process integrated this information to develop the City of Chino’s Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for development of Connect SoCal and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision, which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. In April 2018, SCAG staff met with City of Chino staff to discuss the Bottom-Up Local Input and Envisioning Process and to answer questions. For the City of Chino, the projected number of households in 2020 was 25,748 and in 2030 was 31,912 (growth of 6,164 households).

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data reviewed during this process may be found in each jurisdiction’s Draft Data/Map Book: <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Chino submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning Process, and also features strategies for growth at the TAZ-level to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to help achieve the SCAG region's GHG emissions reduction targets, as established by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections, may be accessed at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>

As a result of these strategies, in some jurisdictions, growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management (SPM-DM) site at: <http://spmDM.scag.ca.gov>.

Updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Chino and incorporated them into the Growth Vision in July 2020.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low- income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to the California Department of Housing and Community Development (HCD) for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section

65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020: <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology, which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need”, which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and, “existing need”, which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data obtained through Connect SoCal’s Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The Final RHNA Methodology is described in further detail at:

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (“existing need”) and does not affect a change in regional population. For further discussion, see Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

3. Draft RHNA Allocation for the City of Chino

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, the SCAG Regional Council adopted Connect SoCal on September 3, 2020, and the City of Chino received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Chino as summarized in the data and calculations provided in the following tables.

City of Chino Statistics and Inputs		Calculation of Draft RHNA Allocation for Chino	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	2,803	Forecasted household (HH) growth, RHNA period:	2,803
Percent of households who are renting:	37%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	78
Housing unit loss from demolition (2009-18):	62	Replacement Need:	62
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	8,815	TOTAL PROJECTED NEED:	2,943
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	11.68%	Existing need due to job accessibility (50%):	2,175
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,174,000	Existing need due to HQTAs pop. share (50%):	1,502
Share of region's job accessibility (population weighted):	0.52%	Net residual factor for existing need:	342
		<i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	
Jurisdiction's HQTAs population (2045):	36,717	TOTAL EXISTING NEED:	4,020
Share of region's HQTAs population (2045):	0.36%	TOTAL RHNA FOR THE CITY OF CHINO:	6,961
Share of population in low/very low-resource tracts:	0.00%	Very-low income (<50% of AMI):	2,107
Share of population in very high-resource tracts:	16.52%	Low income (50-80% of AMI):	1,281
Social equity adjustment:	150%	Moderate income (80-120% of AMI):	1,201
		Above moderate income (>120% of AMI)	2,372

The transit accessibility measure is based on the population projected to live within designated 'High Quality Transit Areas' (HQTAs) in 2045 based on Connect SoCal's designation of HQTAs and

population forecasts. With a forecasted 2045 population of 36,717 living within HQTAs, the City of Chino will represent 0.36 percent of the SCAG region's total 2045 HQTAs population, which provides the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as a jurisdiction's share of regional jobs that are accessible within a 30-minute commute time. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs located within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which may be reached within a 30-minute automobile commute time from a local jurisdiction's median TAZ is used to allocate housing units based on the job accessibility factor. From the City of Chino's median TAZ, it will be possible to reach 11.68 percent of the region's jobs in 2045 within a 30-minute automobile commute (1,174,000 jobs), based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs.

Please note that the above represents only a partial description of the key data and calculations featured in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF COSTA MESA

Hearing Date: January 22, 2021

The City of Costa Mesa has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

Attachment: Determination Regarding Appeal from the City of Costa Mesa (Final Determination of Appeals Decisions)

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. Public Participation

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. HCD Review of Methodology and Adoption by Council of Governments

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Costa Mesa submits an appeal and requests a RHNA reduction of 5,867 units (of its draft allocation of 11,733 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) – failure to adequately consider household growth factors as well as recent studies warranting reevaluation of the adopted Final RHNA Methodology.
2. Availability of land suitable for urban development or for conversion to residential use – unavailable vacant sites, need to redesignate commercial and industrial zoned lands thereby reducing the employment demand factor.
3. Lands protected from urban development under existing federal or state programs – lands adjacent to the airport, protected open space, historic sites, parks, habitat ecosystems.
4. Changed circumstances – COVID-19 pandemic and its lasting impacts on the economy and housing market in the City and County as well as reduced transit ridership and increased work from home, all of which, the City argues, warrant re-evaluation of some of the main factors in the adopted Final RHNA Methodology.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 22, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to

the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph012221fullagn.pdf?1610771065>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public, and the SCAG staff report, the RHNA Appeals Board denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding the application of the methodology, no evidence was provided to support an incorrect application of the adopted RHNA methodology and or that it is inconsistent with the adopted Connect SoCal Plan. It is also outside the scope of the appeals process to change the regional determination provided by the California Department of Housing and Community Development (HCD).
- 2) Regarding the availability of land, the City does not provide evidence that it cannot accommodate housing using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
- 3) Regarding lands protected from development, no evidence has been provided that the City cannot accommodate its housing need in non-protected areas.
- 4) Regarding change in circumstance, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 22, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Costa Mesa

RECOMMENDED ACTION:

Deny the appeal filed by the City of Costa Mesa to reduce their draft RHNA allocation by 5,867 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Costa Mesa requests a reduction of its RHNA allocation for 5,867 units (from 11,733 units to 5,866 units) based on the following issues:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029)
2. Availability of land suitable for urban development or for conversion to residential use
3. Lands protected from urban development under existing federal or state programs
4. Changed circumstances

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Costa Mesa's RHNA allocation. Regarding Issue 1, no evidence was provided to support an incorrect application of the adopted RHNA methodology and or that it is inconsistent with the adopted Connect SoCal Plan. It is also outside the scope of the appeals process to change the regional determination provided by the California Department of Housing and Community Development (HCD). Regarding Issue 2, the availability of land was not demonstrated to be an impediment to meeting the City's RHNA allocation since it does not provide evidence that it cannot accommodate housing on other areas in the jurisdiction. Regarding Issue 3, for lands protected from development, no evidence has been provided that the City cannot accommodate its housing need in non-protected areas. Finally, in

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Costa Mesa (Final Determination of Appeals Decisions)

regard to Issue 4, change in circumstance, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that the impacts within jurisdiction is disproportionate in comparison to the rest of the SCAG region.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Costa Mesa: 11,733 units
Very Low Income: 2,912 units
Low Income: 1,790 units
Moderate Income: 2,084 units
Above Moderate Income: 4,947 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Costa Mesa. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].

The City indicates that it is appealing its draft RHNA allocation based on an incorrect application of the adopted Final RHNA Methodology. It states SCAG failed to adequately consider local household growth factors and utilized growth projects that are inconsistent with the Connect SoCal Plan, and that the draft RHNA allocation is not consistent with the development patterns projected in the same plan. The appeal indicates the City's projected households in 2045 is estimated to reach 44,200 and argues that the household formation defined in the draft RHNA allocation far exceeds any reasonable projection for growth during the 6th cycle housing element period. It further argues that this inconsistency demonstrates that the draft RHNA allocation fails to provide the distribution of units in an equitable manner, which is one of the five objectives of State housing law.

The appeal further indicates that the adopted RHNA methodology artificially allocated 3,778 units of growth to Costa Mesa in order to shift growth within counties to higher resource jurisdictions, and that "SCAG's own growth forecasts do not support this growth." The City argues that with the adopted RHNA methodology not distributing this need regionally instead of by county, the methodology fails to consider regional employment factors and is arbitrary and artificial.

The City also argues that recent studies, such as the Freddie Mac Housing Supply Report and a study by the Embarcadero Institute, warrant re-evaluation of SCAG's adopted RHNA methodology based on its included vacancy rate and calculations. Also, the City asserts that HCD's regional determination exaggerated the state housing need by over 900,000 units.

In addition, the City indicates argues that the SCAG methodology should not include bus service in its definition of high quality transit area (HQTA), which is used to determine housing need based on access to transit. The appeal writes that bus service is not an efficient mode of transportation in Orange County compared to other modes such as commuter rail.

SCAG Staff Response: The 6th Cycle RHNA regional housing need total of 1,341,827 units, as determined by HCD, consists of both "projected need" and "existing need". "Projected need" is intended to accommodate the growth of population and households between 2021-2029, and "existing need" reflecting additional latent housing needs in the existing population. On January 13, 2020, HCD's finding that SCAG's draft RHNA methodology (which was later adopted as the final RHNA methodology in March) furthered the statutory objectives of RHNA¹, reflected that the

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental

determination is separated into “projected need” and “existing need” components. Projected need is based on the household growth for the comparable RHNA period (2021 to 2029) of the regional transportation plan.

SCAG has allocated both “projected need” and “existing need” consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (“Connect SoCal”). The Connect SoCal Forecasted Regional Development Pattern is shown on Exhibit 1 of the Sustainable Communities Strategy Technical Report, p. 13. Specifically, the development pattern includes priority growth areas, incorporated areas, job centers, entitled projects and sphere of influence which together would accommodate 95% of the growth till 2045. The development pattern is a reflection of the strategies and policies contained in Connect SoCal.

The “projected need” portion of the 6th Cycle RHNA is based on the Connect SoCal Growth Forecast and is consistent with the Connect SoCal development pattern. Specifically, each jurisdictional-level growth forecast of households is translated into “projected need” of housing units after adjusting for two factors of vacancy need and replacement needs.

The “existing need” portion, though not part of the Sustainable Communities Strategy, is also allocated consistent with the Connect SoCal development pattern. Specifically, based on SCAG’s adopted RHNA methodology, “existing need” is allocated based on transit and job access (i.e., assign 50% based on jurisdiction’s share of the region’s population within HQTAs and 50% based on a jurisdiction’s share of the region’s jobs that can be accessed within a 30- minute commute). Accordingly, this allocation is aligned with the strategies and policies underlying the development pattern in the SCS, meaning that allocated total regional housing need (“existing need” and “projected need”) is consistent with the Connect SoCal development pattern.

Additionally, as described above and in Attachment 1: Local Input and development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally-reviewed input data and describes data sources and how they are calculated in detail. The basis for an appeal for this factor is the application of the RHNA methodology, and not the RHNA methodology itself, which was a separate but extensive process that involved multiple steps and public involvement leading up to final adoption.

and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)

Additionally, the appeal further indicates that the adopted RHNA methodology “artificially allocated” 3,778 units of growth to the City in order to shift growth within counties to higher resource jurisdictions and that SCAG’s own growth forecasts do not support this growth. However, as indicated above, SCAG’s adopted RHNA methodology is consistent with the development pattern of the Connect SoCal plan and projected growth is only one component of the RHNA methodology. The residual need that is shifted to higher resource jurisdictions is consistent with the existing need methodology of distributing growth based on transit and job access, and is therefore also consistent with the strategies of the Connect SoCal plan.

The City argues that recent studies warrant re-evaluation of SCAG’s adopted RHNA methodology based on its included vacancy rate and calculations and that HCD’s regional determination exaggerated the state housing need by over 900,000 units. A report by Freddie Mac’s Economic & Housing Research Group titled “The housing supply shortage: State of the states” was released in February 2020, and a slide deck titled “Double counting in the latest housing needs assessment” was placed on the Embarcadero Institute’s website during 2020 (last update September 2020). Notwithstanding the merits (or lack thereof) of these studies, this material cannot now be considered for re-evaluating the RHNA methodology or the regional determination. As discussed above, the RHNA methodology itself is not a basis for appeal. Furthermore, the RHNA Appeals Board has no authority to change the regional determination. The RHNA statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow enough time for the development of a methodology, appeals, and local housing element updates.

Without assessing the merits of the studies, because they were not available during at the time HCD was determining regional housing need, they could not be considered then; and they cannot be considered now that the regional housing need has been determined. Furthermore, these studies are regional in nature and do not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was incorrectly applied to determine the jurisdiction’s share of regional housing need. Because a regional study does not meet this criterion, these studies cannot be used to justify a particular jurisdiction’s appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

In sum, it would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates.

Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction's draft RHNA allocation.

With respect to the inclusion of bus service in the Methodology, as explained in the Response to Issue 1, the only basis for an appeal with respect to the adopted RHNA Methodology is the *application* of the methodology and not the RHNA Methodology itself, which was a separate but extensive process that involved multiple steps and public involvement leading up to final adoption.

SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination. For these reasons, SCAG staff does not recommend a reduction to the City of Costa Mesa's draft RHNA allocation based on based on the application of the adopted RHNA methodology.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code section 65584.04(e)(2)(B)].

The City of Costa Mesa indicates in its appeal that it has several major constraints in certain areas that limit or restrict its ability to accommodate its draft RHNA allocation. It highlights three multi-acre vacant sites that are unavailable for development due to binding development agreements or ownership by the State. The appeal states that there are no other substantial vacant lands for residential development in the City.

The appeal also argues that accommodating a significantly sized RHNA allocation would force the City to redesignate commercial and industrial zoned lands to residential, which would limit the City to create jobs and reduce the employment demand factor in the adopted RHNA methodology. It suggests that this conversion is infeasible and that the RHNA methodology should not rely exclusively on the conversion of commercial and industrial uses to accommodate the RHNA allocation.

The appeal further argues that the City will need to find at least 391 acres of available land to accommodate its RHNA need and that to do so it would need to facilitate enough landowners to make their land available for housing through various regulatory incentives. It also adds that "SCAG should have included a reasonable level of analysis as to the availability of land upon which the City would be able to plan for its RHNA" and indicated that they submitted information on this factor to SCAG as part of the local planning factor survey that was used to help develop the RHNA methodology.

Finally, the appeal indicates that high land values have decreased the development of multi-ownerships lots, which impact the determination of whether a non-vacant or underutilized site is feasible or has potential for development. The appeal states that SCAG “should have made some reasonable effort to ascertain the impact of local market conditions on the feasibility for redevelopment or reuse strategies.”

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

Furthermore, on June 10, 2020, HCD released extensive guidelines for housing element site inventories.² A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs).³ Specifically, the guidelines indicate that (page 32):

“In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance.”

As such, the City can and must consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth.

While the City indicates that there are no currently available vacant sites, it does not provide evidence that it is unable to consider underutilization of other sites, increased densities, and other planning tools to accommodate its assigned need. There is also no evidence provided that all other

² See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf.

³ See also Accessory Dwelling Unit Handbook, HCD, September 2020 at <https://www.hcd.ca.gov/policy-research/docs/adu-ta-handbook-final.pdf>

sites within the City are unsuitable for any development, nor is there any supporting evidence that the rezoning of non-residential sites is impossible. Again, SCAG is prohibited from limiting the consideration of suitable sites due to the City's land use restrictions and is required to review alternative methods to meet housing need, neither of which is provided in the appeal application. SCAG reviewed the submitted local planning factors survey submitted by the City, including this particular factor, but for the same reasons outlined in this paragraph did not reduce the City's allocation based on the response submitted.

In regard to housing market conditions, the feasibility of parcel development may fluctuate depending on a multitude of factors, including costs of land and geographical location. However, the feasibility of a parcel's development does not determine housing demand. While it may be more challenging than in previous market conditions to accommodate housing need, a jurisdiction is still required to accommodate its housing need through a variety of tools to determine which sites should be included in its sites inventory analysis in its housing element.

For these reasons, SCAG staff does not recommend a reduction to the City of Costa Mesa's draft RHNA allocation based on this factor.

Issue 3: Lands Protected from Urban Development under Existing Federal or State Programs [Government Code section 65584.04(2)(C)].

The appeal provides several examples of areas where it cannot accommodate growth. Its John Wayne Airport Environs Land Use Plan, for example, has limited ability to develop residential units due to noise impacts and height restricts from the airport. Additionally, the City has 454 acres of protected open space, including historic sites, parks, and habitat ecosystems. The appeal indicates that 25% of the City's land area is developed with public-owned open space, parks, or other public institutional uses and are infeasible for housing development.

SCAG Staff Response: While SCAG staff does not doubt that the City has dedicated open space land and other types of land designations that are protected by federal and State programs, it does not preclude the City from accommodating its housing need in non-protected areas (see also Response to Issue 2 above). To preserve its dedicated protected and open space, SCAG encourages the jurisdiction to consider available land, increased densities, and other alternative zoning tools in non-open space and protected areas to accommodate its RHNA allocation. SCAG reviewed the submitted local planning factors survey submitted by the City as part of the RHNA methodology development, including this particular factor, but for the same reasons outlined in this paragraph did not reduce the City's allocation based on the response submitted. For these reasons, SCAG staff does not recommend a reduction to its draft RHNA allocation based on this factor.

Issue 4: Changed Circumstances [Government Code section 65584.05(b)].

The City argues that the COVID-19 pandemic has had lasting and considerable impacts on economy and housing market of the City and Orange County. The appeal indicates that job opportunities in various sectors have been eliminated or are operating a fraction of their pre-COVID-19 levels. There has been an increased vacancy in office uses since more office workers are working from home, and the appeal argues that the potential continuation of this trend warrants a re-evaluation or adjustment in the factors related to the job access consideration in the adopted RHNA methodology.

The appeal indicates that due to COVID-19 transit ridership has significantly decreased. Based on a recent survey by the Orange County Transit Authority (OCTA), there has been an increase in work-from-home employment. The same survey indicated that ridership of bus lines starting and ending in the City have decreased by about 50,000 riders per month. Because of this, the appeal argues that a re-evaluation of “some of the main factors included in the RHNA methodology that resulted in a disproportionate distribution of units to cities like Costa Mesa with strong job markets.”

SCAG Staff Response: SCAG recognizes that COVID-19 presents unforeseen circumstances and that local governments have been affected by significant unemployment. However, these facts, as presented by the City, do not “merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04.” (Govt. Code § 65584.05(b)(3)). Furthermore, Section 65584.05(b) requires that:

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

SCAG’s Regional Council delayed the adoption of its 2020-2045 RTP/SCS by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report⁴ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e., the SCAG’s region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region’s long-term competitiveness or the region’s employment outlook for 2023-2045. As such, SCAG’s assessment is that comparable data would not suggest long-range regional employment declines.

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579

The COVID-19 pandemic has had various impacts throughout Southern California; however, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties.

Demand for housing as quantified by the RHNA allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

Furthermore, it is speculative at this time to assume the level of long-term impacts that would affect the Final RHNA Allocation Plan which reflects existing and projected housing needs for the next eight years. Also, as a procedural matter, the City fails to explain how its requested revision (downward adjustment to 5,867 units) is justified by the data presented and how the revision would further the intent of the objectives in Section 65584(d).

For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's Draft RHNA Allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Costa Mesa had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Costa Mesa’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁵ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁶ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Costa Mesa, the anticipated number of households in 2020 was 41,984 and in 2030 was 42,465 (growth of 481 households). In March 2018, SCAG staff and CDR staff met with

⁵ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁶ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

staff from the City of Costa Mesa to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Costa Mesa submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Costa Mesa and incorporated them into the Growth Vision in December 2019. The City of Costa Mesa's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁷ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁷ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Costa Mesa

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Costa Mesa received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Costa Mesa as summarized in the data and calculations in the tables below.

Costa Mesa city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	397
Percent of households who are renting:	61%
Housing unit loss from demolition (2009-18):	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	2,285
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	18.44%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,853,000
Share of region's job accessibility (population weighted):	0.84%
Jurisdiction's HQTAs population (2045):	98,804
Share of region's HQTAs population (2045):	0.97%
Share of population in low/very low-resource tracts:	19.20%
Share of population in very high-resource tracts:	8.21%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Costa Mesa city	
Forecasted household (HH) growth, RHNA period:	397
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	14
Replacement Need	-
TOTAL PROJECTED NEED:	411
Existing need due to job accessibility (50%)	3501
Existing need due to HQTAs pop. share (50%)	4042
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	3778
TOTAL EXISTING NEED	11322
TOTAL RHNA FOR COSTA MESA CITY	11733
Very-low income (<50% of AMI)	2912
Low income (50-80% of AMI)	1790
Moderate income (80-120% of AMI)	2084
Above moderate income (>120% of AMI)	4947

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 98,804 living within HQTAs, the City of Costa Mesa represents 0.97% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be

reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the [City of Costa Mesa]’s median TAZ, it will be possible to reach 18.44% of the region’s jobs in 2045 within a 30-minute automobile commute (1,853,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 3,778 units assigned to the City of Costa Mesa.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF DOWNEY

Hearing Date: January 8, 2021

The City of Downey has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Downey submits an appeal and requests a RHNA reduction of an unspecified number of units (of its draft allocation of 6,510 units). The grounds for appeal are as follows:

- 1) Existing and projected jobs-housing balance - the City of Downey claims that there were inconsistencies with the City's employment forecasting compared to SCAG's SED estimates and data map book.
- 2) Availability of land suitable for urban development or for conversion to residential use - the City of Downey claims it is a built-out urban area with limited land availability and existing infrastructure is aged more than 50 years so any improvements to existing water and sewer systems needed will serve as a deterrent to housing developers.
- 3) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans - the City of Downey claims its RHNA allocation is not consistent with its current growth projections.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 8, 2021, at a noticed public hearing. The City declined the opportunity to present their appeal to the RHNA Appeals Board. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna->

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

[abph010821fullagn.pdf?1609455450](https://scag.ca.gov/rhna-abph010821fullagn.pdf?1609455450)). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding the application of the Final RHNA Methodology, SCAG has reviewed input data and found no inconsistency between City forecasts and SCAG's forecasts.
- 2) Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need. Additionally, evidence from a utility service provider that would preclude the construction of new housing was not demonstrated.
- 3) Regarding distribution of household growth assumed for purposes of comparable Regional Transportation Plans, the City of Downey's RHNA allocation was assigned in a manner consistent with the development pattern in Connect SoCal.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

January 8, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Downey

RECOMMENDED ACTION:

Deny the appeal filed by the City of Downey (City) requesting SCAG conduct an assessment to verify the City's projected population and job growth.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Downey requests SCAG conduct an assessment to verify the City's projected population and job growth and, it asserts three bases for the appeal:

1. Existing and projected jobs-housing balance
2. Availability of land suitable for urban development or for conversion to residential use
3. Distribution of household growth assumed for purposes of comparable Regional Transportation Plans

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Downey's RHNA allocation.

Regarding Issue 1, SCAG has reviewed input data and found no inconsistency between city forecasts and SCAG's; however, the majority of the City's Draft RHNA Allocation is based on existing need measures rather than projected growth. Issue 2 was not demonstrated to be an impediment since housing legislation does not preclude consideration of all non-vacant sites or alternate zoning, which is required to be considered. Additionally, evidence from a utility service provider that would

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Downey (Final Determination of Appeals Decisions)

preclude the construction of new housing was not demonstrated. Regarding Issue 3, the City of Downey's RHNA allocation was assigned in a manner consistent with the development pattern in Connect SoCal.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received Draft RHNA Allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Downey:	6,510 units
Very Low Income:	2,074 units
Low Income:	944 units
Moderate Income:	913 units
Above Moderate Income:	2,579 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Downey. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Existing or projected jobs-housing balance [Govt. Code § 65584.04(e)(1)].***

The City of Downey claims that there were inconsistencies with the City's employment forecasting compared to SCAG's SED estimates and data map book. Specifically, the City provided a response identifying that the baseline population estimate was higher than Census estimates and the California Department of Finance (CA DOF) population estimates, and requests SCAG to conduct an assessment that is reflective of the City's accurate projection of population and job growth.

SCAG Staff Response: Please see staff report Attachment 1, "Local Input and Development of Draft RHNA Allocation" which describes the extent of local engagement and review opportunities provided to local jurisdictions on the employment job forecast. Review opportunities began in October 2017. While the initial deadline for input was October 2018, additional review opportunities were provided to all local jurisdictions through June 2020.

In May 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions about the RHNA and Connect SoCal process. Input from the City of Downey on the growth forecast was received in October 2018 and SCAG revised the preliminary population, household and employment data for the City of Downey based on that input. The final population, household and employment data were reviewed and verified by the City in October 2018 as shown in the City of Downey Data Input and Verification Form, attached to this staff report. SCAG received additional technical corrections from the City of Downey and incorporated them into the Growth Vision in late 2019. The City of Downey's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process, since that data was reflective of the policies and strategies of the Plan. Therefore, SCAG has already reviewed and incorporated the City of Downey's input on its projected population, household and employment data and does not recommend a reduction to the jurisdiction's draft RHNA allocation based on this factor.

While the City attests that there are inconsistencies in forecast data, forecasted growth comprises only one part of SCAG's adopted 6th cycle RHNA methodology. In Downey's case, only 480 units of its draft allocation (7.4 percent) are due to projected need. The remainder are due to existing need measures, namely transit accessibility and job accessibility.

The adopted RHNA methodology includes a calculation of job accessibility as one of the factors to determine a jurisdiction's draft RHNA allocation. Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute (additional details are found in the adopted RHNA methodology). This is **not** a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents, which can

include jobs outside of the jurisdiction. Over 80 percent of SCAG region workers live and work in different jurisdictions, which calls for an approach to the region’s job housing relationship through the measurement of access rather than number of jobs within a certain jurisdiction. Specifically, as indicated in Attachment 1 of this staff report, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Downey’s median TAZ, it will be possible to reach 20.94% of the region’s jobs in 2045 within a 30-minute automobile commute (2,104,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs), as shown in the Map of Job Accessibility in the City of Downey, attached to this staff report.

These existing need measures follow the policy direction of SCAG’s Regional Council as expressed in the 6th cycle RHNA methodology. The RHNA methodology itself cannot be changed through the appeals process and as such staff cannot recommend a reduction on this basis.

Issue 2: Availability of land suitable for urban development [Govt. Code § 65584.04(e)(2)(B)].

The City of Downey claims that they are a built-out urban area with limited land availability and existing infrastructure is aged more than 50 years so any improvements to existing water and sewer systems needed will serve as a deterrent to housing developers who are not able to bear the cost of infrastructure improvements in addition to land and construction costs. The City of Downey also claims that recent legislation like SB 166 and AB 1397 will hinder housing developers from wanting to develop housing in their city due to requirements of maximizing underdeveloped or underutilized sites.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of ‘available’ land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or

alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City's projected growth. Furthermore, on June 10, 2020, HCD released extensive guidelines for housing element site inventories which considers AB 1397's changes¹. A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs). Specifically, the guidelines indicate that (page 32):

"In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance."

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to allocate RHNA need. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

In addition, costs to upgrade and develop appropriate infrastructure and comply with recent legislation cannot be considered by SCAG as a justification for a reduction since the RHNA Allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not required to develop the assigned units.

Issue 3: Distribution of household growth assumed for purposes of comparable Regional Transportation Plans [Govt. Code § 65584.04(e)(3)].

The City of Downey claims its RHNA allocation is not consistent with its current growth projections. The prior growth projections overestimated the City's growth forecasts by 8.6% to 13.4 % in different categories.

SCAG Staff Response: Each jurisdiction, including the City of Downey's RHNA allocation has two components: the projected need and existing need. The projected need component is primarily based on household growth in Connect SoCal, SCAG's 2020-2045 Regional Transportation Plan which was fully adopted in September 2020. As described in Attachment 1, the City's projected need consists of 480 units. Specifically, household growth for the city during the RHNA projection period is for 402 units. In addition, there are two adjustment factors of vacancy need (13 units) and replacement need (65 units). The projected need for the city is the sum of household growth, vacancy need and replacement need. As described under Issue 1, the City reviewed and verified the

¹ See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf

forecasted population, household and employment data (see Data Input and Verification Form, attached).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. As determined by HCD, a large share of the region's housing need is based on factors other than future household growth and can be characterized as existing need. The existing need of the City (6,029 units) is its share of the regional existing need based on HQTAs population share (1,678 units) and job accessibility (3,830 units), considering opportunities to maximize the use of public transportation and existing transportation infrastructure. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e., "existing need") and would not result in a change in regional population. SCAG's RHNA methodology explicitly ensures that these units are allocated to jurisdictions across the region based on measures of transit and job accessibility such that future housing development can maximize the use of public transportation and existing infrastructure.

Ultimately, the Regional Transportation Plan/Sustainable Communities Strategy is a related, but separate process from the Regional Housing Needs Assessment. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. In contrast, the Connect SoCal Growth Forecast is an assessment of the reasonably foreseeable future pattern of growth given, among other factors described above, the availability of zoned capacity. For further discussion see Attachment 1 as well as Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf

In summary, the City of Downey's RHNA allocation is consistent with the distribution of household growth envisioned in Connect SoCal and maximizes the use of public transportation and existing transportation infrastructure. For this reason, SCAG staff does not recommend a reduction to its draft RHNA allocation based on this factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Downey had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Downey's Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG's preliminary growth forecast information. For the City of Downey, the anticipated number of households in 2020 was 34,424 and in 2030 was 35,437 (growth of 1,013 households). In May 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of Downey on the growth forecast was received in October 2018. Following input, household totals

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

were 32,840 in 2020 and 33,327 in 2030 (growth of 487 households), for a reduced household growth during this period of 567 compared to the preliminary growth forecast data.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the Draft RHNA Methodology. The City of Downey submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities.

SCAG received additional technical corrections from the City of Downey and incorporated them into the Growth Vision in late 2019. The City of Downey's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at: <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Downey

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Downey received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Downey as summarized in the data and calculations in the tables below.

Downey city statistics and inputs:		Calculation of Draft RHNA Allocation for Downey city	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	402	Forecasted household (HH) growth, RHNA period:	402
Percent of households who are renting:	49%	Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	13
Housing unit loss from demolition (2009-18):	65	Replacement Need	65
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	1,279	TOTAL PROJECTED NEED:	480
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	20.94%	Existing need due to job accessibility (50%)	3830
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	2,104,000	Existing need due to HQTAs pop. share (50%)	1678
Share of region's job accessibility (population weighted):	0.92%	Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	520
Jurisdiction's HQTAs population (2045):	41,029	TOTAL EXISTING NEED	6029
Share of region's HQTAs population (2045):	0.40%	TOTAL RHNA FOR DOWNEY CITY	6510
Share of population in low/very low-resource tracts:	0.02%	Very-low income (<50% of AMI)	2074
Share of population in very high-resource tracts:	0.00%	Low income (50-80% of AMI)	944
Social equity adjustment:	150%	Moderate income (80-120% of AMI)	913
		Above moderate income (>120% of AMI)	2579

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 41,029 living within HQTAs, the

City of Downey represents 0.40% of the SCAG region's HQT population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on transit accessibility. From the City of Downey's median TAZ, it will be possible to reach 20.94% of the region's jobs in 2045 within a 30-minute automobile commute (2,104,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 520 units assigned to the City of Downey.

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF EL MONTE

Hearing Date: January 11, 2021

The City of El Monte has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of El Monte submits an appeal and requests a RHNA reduction of 3,136 units (of its draft allocation of 8,481 units). The grounds for appeal are as follows:

1. Lack of available land suitable for urban development – the City indicates that it is fully built out with limited available developable land.

B. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 11, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011121fullagn_0.pdf?1609868354). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

C. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding lack of available land suitable for urban development, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need. While the City has demonstrated significant progress toward creating increased residential opportunities proximal to its two major transit stations, additional efforts need to be extended to accommodate forecasted household growth and existing housing need.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 11, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Michael Gainor, Senior Regional Planner,
(213) 236-1822, Gainor@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of El Monte

RECOMMENDED ACTION:

Deny the appeal filed by the City of El Monte (the City) to reduce its Draft RHNA Allocation from its current draft allocation of 8,481 units to 5,345 units, a reduction of 3,136 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

EXECUTIVE SUMMARY:

SUMMARY OF APPEAL:

The City of El Monte requests a reduction of its RHNA allocation of 8,481 residential units based on the following issue:

- 1) Lack of available land suitable for urban development.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal submitted by the City of El Monte and recommend no change be made to the City’s RHNA allocation.

Issue 1 was not accepted because state law housing requires that consideration of the availability of land suitable for residential development must include land uses other than vacant land.

While the City has demonstrated significant progress toward creating increased residential opportunities proximal to its two major transit stations, additional efforts need to be extended to accommodate forecast household growth and existing housing need.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of El Monte (Final Determination of Appeals Decisions)

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the draft RHNA allocation for the City of El Monte is provided below.

Total RHNA Allocation for the City of El Monte: 8,481 units

Very Low Income: 1,792 units

Low Income: 851 units

Moderate Income: 1,230 units

Above Moderate Income: 4,608 units

Additional background information related to the draft RHNA allocation for the City of El Monte is included in Attachment 1.

Summary of Comments Received During 45-day Comment Period

No comments were received from local jurisdictions or the California Department of Housing and Community Development (HCD) during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of El Monte. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Cities Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:**Issue 1: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].**

The City of El Monte indicates that it is fully built-out and its availability of developable land is limited. As a result, the City has very limited opportunities for new residential development on existing vacant lands. In its appeal, the City provides an overview of several sites that it is planning to accommodate a portion of its RHNA allocation, including locations within close proximity to high quality transit amenities, including the City’s Metrolink Station and the El Monte Transit Center. The City also includes an analysis of currently designated sites that could accommodate a limited number of units through increased density and mixed-use opportunities. However, since single family and multi-family zones are built out, infill opportunities are limited. The City concludes in its appeal that its draft allocation of 8,481 new housing units within the eight-year RHNA planning period is more than may be reasonably accommodated.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land.

As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter, p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth.

While the City of El Monte’s pursuit of transit-accessible housing opportunities near its major transit facilities is recognized, SCAG is not able to reduce the City’s RHNA allocation based on its assertion that it is a built-out community, particularly if constraints are due to existing zoning established by the City. The City cites to limitations due to its general plan, specific plans, and various other zoning restrictions. The City should seek alternative means for accommodating the needed housing units.

FISCAL IMPACT:

Work associated with this item is included in the current FY 2020-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of El Monte had to provide information and local input on SCAG’s growth forecast, the adopted RHNA methodology, and the Growth Vision of the 2020 RTP/SCS (Connect SoCal). It also describes how the RHNA Methodology development process integrated this information to develop the City of El Monte’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data in preparation for development of Connect SoCal and the 6th cycle of RHNA.¹ Each jurisdiction was provided a package of land use, transportation, environmental, and growth forecast data for their review and revision which was due on October 1, 2018.² While the local input process materials focus principally on jurisdiction level and Transportation Analysis Zone (TAZ) level growth; input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of El Monte, the anticipated number of households in 2020 was 28,115 and in 2030 was 30,449 (growth of 2,334 households). In January 2018, SCAG staff met with jurisdictional staff to discuss the Bottom-Up Local Input and Envisioning Process and to answer questions. Input from the City of El Monte on the growth forecast was received in November 2018. Following input, household totals

¹ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. RHNA identifies anticipated housing need over a specified eight-year period and requires local jurisdictions to make available sufficient zoning capacity to accommodate this need. A further discussion of the relationship between these processes may be found in Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

² A detailed list of data reviewed during this process may be found in each jurisdiction’s Draft Data/Map Book: <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

were updated to 28,172 in 2020 and 31,145 in 2030, for a revised household growth during this period of 2,973.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB 2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of El Monte submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to achieve the SCAG region's GHG reduction targets, as provided by the California Air Resources Board (CARB) in accordance with state planning law.

Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections may be found at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>

As a result of these strategies, in some jurisdictions, growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. With the release of the draft Connect SoCal, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management (SPM-DM) site:

<http://spmDM.scag.ca.gov>

Updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of El Monte from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- 1) *Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households.*
- 2) *Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- 3) *Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- 4) *Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- 5) *Affirmatively furthering fair housing (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in

Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020: <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the SCAG Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: ‘projected need’, which includes the number of housing units required to accommodate anticipated population growth over the eight-year RHNA planning period, and ‘existing need’, which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.³ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and ‘High Quality Transit Area’ (HQT) population based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data obtained through the Connect SoCal Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The RHNA methodology is described in further detail at:

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

³ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (existing need) and do not result in a change in regional population. For further discussion, see Connect SoCal Master Response 1: https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

3. Draft RHNA Allocation for the City of El Monte

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of El Monte received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of El Monte as summarized in the data and calculations featured in the table below.

City of El Monte Statistics and Inputs		Calculation of Draft RHNA Allocation for El Monte	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	2,453	Forecasted household (HH) growth, RHNA period:	2,453
Percent of households who are renting:	60%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	88
Housing unit loss from demolition (2009-18):	-	Replacement Need:	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	8,482	TOTAL PROJECTED NEED:	2,541
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	13.51%	Existing need due to job accessibility (50%):	2,851
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal 2045 regional forecast of 10.049 million jobs)</i>	1,358,000	Existing need due to HQTa pop share (50%):	3,558
Share of region's job accessibility (population weighted):	0.68%	Net residual factor for existing need: <i>(Negative values reflect a cap on lower-resourced communities with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	-468
Jurisdiction's HQTa population (2045):	86,985	TOTAL EXISTING NEED:	5,951
Share of region's HQTa population (2045):	0.85%	TOTAL RHNA FOR THE CITY OF EL MONTE:	8,481
Share of population in low/very low-resource tracts:	94.69%	Very-low income (<50% of AMI):	1,792
Share of population in very high-resource tracts:	0.00%	Low income (50-80% of AMI):	851
Social equity adjustment:	180%	Moderate income (80-120% of AMI):	1,230
		Above moderate income (>120% of AMI):	4,608

The transit accessibility measure is based on the population anticipated to live within ‘High Quality Transit Areas’ (HQTAs) in 2045 based on Connect SoCal’s designation of HQTAs and its population forecasts. With a forecasted 2045 population of 86,985 living within HQTAs, the City of El Monte will account for 0.85 percent of the SCAG region’s total 2045 HQTA population, which provides the basis for allocating housing units based on the transit accessibility factor.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute commute time. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on job accessibility. From the City of El Monte’s median TAZ, it will be possible to reach 13.51 percent of the region’s jobs in 2045 within a 30-minute automobile commute (1,358,000 jobs), based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs.

While allocating housing need on the basis of job and transit accessibility is consistent with the statutory objectives of RHNA and represents factors in which El Monte scores highly, in the SCAG region many jurisdictions with especially high job and transit accessibility are lower-income and lower-resourced. The methodology applies a maximum to these ‘Disadvantaged Communities’ (DACs) equal to the 2045 household growth forecast, as described above. While El Monte’s existing need factors score highly, as a DAC, a residual factor of -468 units has been applied to ensure that the City’s total RHNA housing unit need of 8,481 units does not exceed its 2020-2045 forecasted household growth plus approximately three percent.

Please note that the above represents only a partial description of the key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF FONTANA

Hearing Date: January 6, 2021

The City of Fontana has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Fontana submits an appeal and requests a RHNA reduction of 10,563 units (of its draft allocation of 17,477 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th cycle RHNA (2021 – 2029) - inconsistency with the household growth projections determined in the Connect SoCal Plan.*
2. Sewer or water infrastructure constraints – City does not have adequate water supply capacity based on the local water provider's Urban Water Management Plan.
3. Changed circumstances - COVID-19 pandemic severely impacting the City's economy and the development capacity of the private housing market. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA.

*In the RHNA Appeal Request Form, the City checked the local planning factor "Distribution of household growth assumed for purposes of comparable Regional Transportation Plan." It appears that the City discusses this factor in the context of the RHNA Methodology.

B. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 6, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna->

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

[abph010621fullagn.pdf?1609379165](https://scag.ca.gov/rhna-subcommittee)). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

C. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

1) Regarding the application of the RHNA methodology, SCAG has allocated total regional housing need ("existing need" and "projected need") consistent with the Connect SoCal development pattern. Please see Attachment 1 to the staff report, "Local Input and Development of Draft RHNA Allocation". Further, SCAG reviewed a wide range of reports to develop the RHNA methodology, and SCAG does not have the authority to further appeal the regional determination.

2) Regarding the availability of existing water and sewage infrastructure, because it is not evident that the water providers have rendered decisions that would prevent the jurisdiction from providing the necessary infrastructure. Also, costs to upgrade and develop appropriate water and sewage infrastructure may not be considered as a justification for a reduction in a RHNA allocation.

3) Regarding change in circumstances, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 6, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Roland Ok, Program Manager II,
(213) 236-1819, ok@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Fontana

RECOMMENDED ACTION:

Deny the appeal filed by the City of Fontana (the City) to reduce its draft RHNA allocation by 10,563 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEALS:

The City of Fontana requests a reduction of its RHNA allocation by 10,563 units (from 17,477 units to 6,914 units) based on the following issues:

- 1) Application of the adopted Final RHNA Methodology for the 6th cycle RHNA (2021 – 2029) is inconsistent with the household growth projections determined in the Connect SoCal Plan.*
- 2) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.
- 3) Changed circumstances due to the COVID-19 pandemic severely impacting the City’s economy and the development capacity of the private housing market.

*In the RHNA Appeal Request Form, the City checked the local planning factor “Distribution of household growth assumed for purposes of comparable Regional Transportation Plan.” It appears that the City discusses this factor in the context of the RHNA Methodology.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Attachment: Determination Regarding Appeal from the City of Fontana (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Fontana RHNA allocation.

Issue 1: SCAG has allocated total regional housing need (“existing need” and “projected need”) consistent with the Connect SoCal development pattern. Please see staff report Attachment #1, “Local Input and Development of Draft RHNA Allocation”. SCAG has reviewed a wide range of reports to develop the RHNA methodology, and SCAG does not have the authority to further appeal the regional determination. As such, SCAG staff do not recommend granting an appeal on these bases.

Issue 2: The City has not provided evidence that the respective provider has rendered a decision that would prevent the jurisdiction from providing necessary infrastructure. Further, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA does not require that the assigned unit be developed. As such, SCAG staff do not recommend granting an appeal on this basis.

Issue 3: The long-term impacts of COVID-19 are speculative at this point and are not unique to any single SCAG jurisdiction, and the City has not provided evidence that housing need within Fontana is disproportionately impacted in comparison to the rest of the SCAG region. As such, SCAG staff do not recommend granting an appeal on this basis.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA Allocation for the City of Fontana: 17,477

Very Low Income: 5,096

Low Income: 2,943

Moderate Income: 3,029

Above Moderate Income 6,409

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Fontana. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(1)].

The City of Fontana claims that SCAG's adopted RHNA methodology fails to consider growth projections consistent with the Connect SoCal Plan. The City argues that SCAG failed to adequately consider local household growth factors and utilized growth projections inconsistent with Connect SoCal. The City asserts that the RHNA allocation assumes a household growth rate 2.5 times above Connect SoCal forecasts and the City believes that future growth need should be directly tied to projected growth stated within the Connect SoCal.

Further, the City cites a Freddie Mac report (February 2020) which indicates that the entire state of California has a shortage of 820,000 housing units, which is lower than the 1.34 million provided by HCD for the SCAG region alone. The City argues that based on the findings provided by the Freddie Mac Report, the total regional allocation should be reduced to 392,075.

SCAG Staff Response: The City asserts that "SCAG's proposed methodology is inconsistent with the household growth projects determined in the Connect SoCal Plan." An appeal citing the adopted (not proposed) RHNA methodology as its basis must appeal the application of the methodology, not the methodology itself. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction. The City has not provided evidence of such a data error or any other misapplication of the adopted RHNA methodology, and thus, the City

cannot appeal under this basis. Moreover, appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology and supported by adequate documentation.

It is important to note that the regional determination is not a basis for appeal per the adopted RHNA Appeals procedures as it is not within the authority of the Appeals Board to make changes. SCAG staff fully considered the input provided by the City of Fontana during the development of the Integrated Growth Forecast and incorporated this input into the development of projected need for the City's draft RHNA Allocation. SCAG has allocated both "projected need" and "existing need" consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("Connect SoCal"). For further details regarding SCAG's RHNA Methodology please refer to Attachment 1, "Local input and development of draft RHNA allocation". When accounting for total projected and existing need, Fontana's Draft RHNA Allocation is 17,477 units.

Further, SCAG's development of a consultation package to HCD regarding the regional housing needs determination took place during the first half of 2019. During this time SCAG extensively reviewed a wide range of reports which commented on housing needs in the state and region, including studies from USC, UCLA, UC-Berkeley, the California Legislative Analyst's Office, Beacon Economics, McKinsey, the Center for the Continuing Study of the California Economy, and others. These studies covered a wide range of approaches and methodologies for understanding housing need in the region and state. On March 27, 2019 SCAG convened a panel of fifteen experts in demographics, economics, and housing planning to assess and review the region's housing needs in the context of SCAG's regional determination.

Notwithstanding the merits of the various approaches toward estimating regional housing need, state statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow sufficient time for the development of a methodology, appeals, and local housing element updates.

In February 2020 national home lending agency Freddie Mac's Economic & Housing Research group prepared a national analysis of housing supply shortages titled "The Housing Supply Shortage: State of the States" (the Freddie Mac report). This information cannot now be considered for adjusting HCD's regional housing needs determination. The RHNA statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow enough time for the development of a methodology, appeals, and local housing element updates.

The defined timeframes are guided by the deadline for the housing element revisions for HCD's RHNA determination and SCAG's Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region's existing and projected housing need pursuant to Section 65584.01 at least two years prior to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This "determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments." Govt. Code § 65584.01(b). HCD begins the process 26 months prior to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the RHNA allocation methodology up to 30 months prior to the scheduled revision. By necessity, the data used for these processes is data available at that time.

Without assessing the merits of the report, because the Freddie Mac report was not available during at the time HCD was determining regional housing need, it could not be considered then; and it cannot be considered now that the regional housing need has been determined. Furthermore, the Freddie Mac report is regional in nature and does not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was applied incorrectly to determine the jurisdiction's share of regional housing need. Because a regional study does not meet this criterion, these studies cannot be used to justify a particular jurisdiction's appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

In sum, it would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates. Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction's draft RHNA allocation. For these reasons, SCAG staff do not recommend a reduction to Fontana's Draft RHNA Allocation.

Issue 2: The City contends that SCAG failed to adequately consider information related to sewer and water infrastructure constraints [Government Code Section 65584.04(e)(2)(A)].

Government Code Section 65584.04(e)(2)(A) indicates that, to the extent sufficient data is available, the following factor shall be included in developing the RHNA methodology:

Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from

providing necessary infrastructure for additional development during the planning period.

The City of Fontana argues that the City does not have adequate water supply capacity to accommodate development of the 2021-2029 RHNA allocation. The City also argues that SCAG's methodology failed to consider a lack of sewer availability. The City states that a lack of available infrastructure creates challenges in subdividing property for infill development or increased density as well as direct constraints to potential new development where water and sewer connections are not adequate, thereby putting additional strain on the City and districts that control water and sewer connections.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water and sewer constraints mentioned by the jurisdiction, it is not evident that the respective providers have rendered decisions that would prevent the jurisdiction from providing necessary infrastructure.

In addition, costs to upgrade and develop appropriate water and sewage infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA allocation only requires a jurisdiction to plan and zone for its determined housing need and is not required to actually develop the allocated units. In other words, the RHNA allocation is not a building quota. For these reasons, SCAG staff do not recommend a housing need reduction based upon this planning factor.

Issue 3: *The City contends that SCAG failed to consider changed circumstances [Government Code 65584.05(b)].*

The City of Fontana argues that the COVID-19 pandemic presents an unforeseen changed circumstance that has severely impacted the City's economy, the current and future housing market and impacted the development capacity of the private market to create housing within Fontana. The City also argues that due in part of the COVID-19 pandemic, the state of California is experiencing population growth levels at historically low levels, which also merits a revision to the draft RHNA allocation.

SCAG Staff Response: SCAG recognizes that COVID-19 presents unforeseen circumstances and that local governments have been affected by significant unemployment. However, these facts, as presented by the City, do not "merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04." (Govt. Code § 65584.05(b)(3)). Furthermore, Section 65584.05(b) requires that:

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

SCAG’s Regional Council delayed the adoption of its 2020-2045 RTP/SCS by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report¹ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e. the SCAG’s region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region’s long-term competitiveness or the region’s employment outlook for 2023-2045. As such, SCAG’s assessment is that comparable data would not suggest long-range regional employment declines.

The COVID-19 pandemic has had various impacts throughout Southern California; however, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction’s Draft RHNA allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Fontana had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Fontana’s Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal) and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Fontana, the anticipated number of households in 2020 was 55,139 and in 2030 was 66,769 (growth of 11,630). On March 26, 2018, SCAG staff met with staff from the City of Fontana to discuss the

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Bottom-Up Local Input and Envisioning Process and answer questions. Following input, household totals were 55,139 in 2020 and 64,192 in 2030, for a reduced household growth during this period of 9,053.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey, Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Fontana submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmDM.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Fontana and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need” which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and “existing need,” which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from Connect SoCal’s aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Final RHNA Methodology and Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the Covid-19 pandemic, SCAG adopted of Connect SoCal on September 3, 2020, and the City

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. “existing need”) and does not affect a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

of Fontana received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Fontana as summarized in the data and calculations in the tables below.

City of Fontana Statistics and Inputs		Calculation of Draft RHNA Allocation for Fontana	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	7,469	Forecasted household (HH) growth, RHNA period:	7,469
Percent of households who are renting:	36%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	205
Housing unit loss from demolition (2009-18):	-	Replacement Need:	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	23,494	TOTAL PROJECTED NEED:	7,674
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	11.50%	Existing need due to job accessibility (50%):	5,058
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,155,000	Existing need due to HQTa pop. share (50%):	3,911
Share of region's job accessibility (population weighted):	1.21%	Net residual factor for existing need: <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	835
Jurisdiction's HQTa population (2045):	95,605	TOTAL EXISTING NEED:	9,804
Share of region's HQTa population (2045):	0.93%	TOTAL RHNA FOR THE CITY OF FONTANA:	17,477
Share of population in low/very low-resource tracts:	35.08%	Very-low income (<50% of AMI):	5,096
Share of population in very high-resource tracts:	8.85%	Low income (50-80% of AMI):	2,943
Social equity adjustment:	150%	Moderate income (80-120% of AMI):	3,029
		Above moderate income (>120% of AMI)	6,409

The transit accessibility measure is based on the population anticipated to live in 'High Quality Transit Areas' (HQTAs) in 2045 based on Connect SoCal's designation of HQTAs and population forecasts. With a forecasted 2045 population of 95,605 living within HQTAs, the City of Fontana

represents 0.93% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute commute. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on job accessibility. From the City of Fontana median TAZ, it will be possible to reach 11.5% of the region’s jobs in 2045 within a 30-minute automobile commute (1,155,000 jobs), based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs.

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 835 units assigned to the City of Fontana.

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF FOUNTAIN VALLEY

Hearing Date: January 19, 2021

The City of Fountain Valley has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

- “(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.
- (5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

- “(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.
- (2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:
 - (A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.
 - (B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Fountain Valley submits an appeal and requests a RHNA reduction of 3,455 units (of its draft allocation of 4,827 units). The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - the procedure for the November 2019 regional council decision which yielded the draft RHNA methodology was insufficiently transparent.
- 2) Availability of land suitable for urban development or conversion to residential use – the City lacks suitable sites.
- 3) Affirmatively furthering fair housing – the City identifies seven potential sites and indicates that developing affordable housing in those locations could lead to overconcentration of low-income units and a segregated living pattern in the City.
- 4) Changed circumstances – the City indicates the allocation was based on an incomplete replacement need survey and that Covid-19 has changed conditions.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 19, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to

the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011921fullagn.pdf?1610770557>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the Final RHNA Methodology, SCAG undertook an extensive process to develop the draft and final methodology including numerous opportunities for input by local jurisdictions; the City's objection to the adopted Final RHNA Methodology is not a valid basis for an appeal.
- 2) Regarding availability of land suitable for urban development or conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
- 3) Regarding affirmatively furthering fair housing, the City's allocation of low and very low-income units is consistent with the social equity adjustment in the Final RHNA Methodology.
- 4) Regarding changed circumstances, updated information on replacement need was submitted too late in the process to be considered in the draft RHNA allocation process. Additionally, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

During the appeals hearing, the Appeals Board requested additional information regarding County level share of units by income (regional data was provided in the staff report). SCAG staff provided additional data on existing and County level data as follows:

	Fountain Valley Existing	Fountain Valley Draft Allocation	Orange County	SCAG Regional Determination
Very-low income	22.3%	27.0%	25.0%	26.2%
Low income	15.4%	16.2%	15.9%	15.4%
Moderate Income	18.9%	17.2%	17.8%	16.7%
Above-moderate Income	43.4%	39.5%	41.7%	41.7%

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City’s appeal and finds that the City’s RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG’s Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 19, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal of the Draft Allocation for the City of Fountain Valley

RECOMMENDED ACTION:

Deny the appeal filed by the City of Fountain Valley to reduce the draft RHNA allocation for the City of Fountain Valley by 3,455 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Fountain Valley requests a reduction of its RHNA allocation from 4,827 units to 1,372 units (3,455 units). The requested reduction is equivalent to the total allocation which Fountain Valley would have received under a draft version of the RHNA methodology, which was considered, but ultimately defeated at the November 2019 Regional Council meeting. Fountain Valley bases its appeal on the following:

- 1) Application of the adopted final RHNA methodology for the 6th Cycle RHNA (2021 – 2029) - the procedure for the November 2019 regional council decision which yielded the draft RHNA methodology was insufficiently transparent.
- 2) Availability of land suitable for urban development or conversion to residential use – the City lacks suitable sites.
- 3) Affirmatively furthering fair housing – the City identifies seven potential sites and indicates that developing affordable housing in those locations could lead to overconcentration of low-income units and a segregated living pattern in the City.
- 4) Changed circumstances – the City indicates the allocation was based on an incomplete replacement need survey and that Covid-19 has changed conditions.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Fountain Valley (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Fountain Valley's RHNA allocation.

Regarding Issue 1, SCAG undertook an extensive process to develop the draft and final methodology including numerous opportunities for input by local jurisdictions; the City's objection to the adopted final RHNA methodology is not a valid basis for an appeal.

Regarding Issues 2 and 3, State law requires the consideration of alternative land use opportunities including, for example, alternative zoning and accessory dwelling units, and the City does not provide sufficient evidence that it cannot accommodate the allocation. As such, we do not recommend granting the appeal on these bases.

Regarding Issue 4, updated information on replacement need was submitted too late in the process to be considered in the draft RHNA allocation process. Furthermore, impacts from COVID-19 are not unique to any single SCAG jurisdiction and the City has not provided evidence that housing need within Fountain Valley is disproportionately impacted in comparison to the rest of the SCAG region. As such, we do not recommend granting an appeal on these bases.

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the final RHNA methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Fountain Valley : 4,827 units

Very Low Income: 1,304 units

Low Income: 784 units

Above Moderate Income: 1,937 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Fountain Valley. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted final RHNA methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].

The City of Fountain Valley claims that the adoption of the draft RHNA methodology on 11/7/2019, was insufficiently transparent and did not provide ample opportunity for review. This is especially important in Fountain Valley who received a draft allocation of 4,827 units compared to 1,372 in a previously recommended version. Fountain Valley claims, but does not provide evidence of, "violations of procedural by-laws." The City also suggests that the adopted methodology "fails to account for local input and growth forecast data," and "was unable to be analyzed for potential impacts by SCAG staff before the vote of the Regional Council."

SCAG Staff Response: An appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself or the manner in which the methodology was adopted. Nevertheless, SCAG respectfully disagrees with the characterizations of the actions of the Regional Council as set forth by the City as SCAG properly adopted the RHNA methodology.

First, the SCAG Regional Council took action on both the draft and final RHNA methodology pursuant to properly noticed agendas, and every member of the Regional Council, in addition to a significant number of members of the public, had ample opportunity to place on the record, both in writing and in person, their respective input for the Regional Council's consideration. For example, no less than fourteen (14) letters were acknowledged on the record and these were made available for public and SCAG review prior to the Regional Council's action on the draft methodology, all in compliance with applicable law.

Further, many members of the public offered oral testimony on the draft RHNA methodology both in support of the original staff recommendation and in support of the alternative draft RHNA methodology that was ultimately approved after a robust discussion among the Regional Council, with staff offering input and answering questions as requested. Both methodologies had been presented in the staff report that was published in the November 7th Regional Council meeting agenda in advance of the meeting in accordance with applicable law. Finally, members of the Regional Council were given wide opportunity to offer input and comments during the course of the discussion and consideration of the item.

The November 7th Regional Council action was preceded by more than nine months of preparatory work and the regional planning process is necessarily complex and multi-faceted. That there are competing interests and priorities is not new. Since the start of the RHNA process in October 2018, SCAG staff has been committed to a fair and transparent process from the very beginning.

Importantly, the draft methodology was reviewed by HCD and was found to further statutory objectives of RHNA on January 13, 2020. On March 5, 2020, SCAG Regional Council adopted the draft methodology as the final methodology.

Therefore, in light of the above, SCAG staff does not recommend a reduction to the City's draft RHNA allocation based on this factor.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

Fountain Valley claims that SCAG failed to consider the availability of land suitable for urban development, which is a local planning factor. The City references HCD's site inventory guidebook and indicates that it would be especially difficult to demonstrate that much of the city's developable land fits HCD's criteria based on, among other factors, market conditions, the realistic development capacity of non-vacant sites, and providing substantial evidence that existing land uses do not present impediments to development. The City provides an assessment of 114.6 acres across seven sites which are identified based on its initial assessment of suitable land and which would have a realistic capacity of 2,476 units.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG "may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality" (which includes the land use policies in its General Plan). "Available land suitable for urban development or conversion to residential use," as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a

component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can and must consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth. While the City discusses in its appeal the possible challenges for the City to find available sites, such as additional analyses required by HCD, they have not demonstrated they are precluded from finding these sites. Additionally, other challenges outlined by the City, such as the cost of development, are not a basis for appeal.

While the local input growth forecast—which had taken extensive consideration of land availability—was the principal driver for roughly 38% of the RHNA methodology, this is only one of the factors considered in the development of a RHNA methodology. In fact, the measures of existing housing need (job access and transit access) are also based on local input as they are derived from small area growth forecast data reviewed by local jurisdictions.

While an assessment is provided for development on 114.6 acres (which yields an estimated development capacity of 2,476 units—in excess of the City’s proposed *total* RHNA allocation of 1,372 units), state law requires the consideration of alternative land use opportunities including, for example, alternative zoning and accessory dwelling units. Therefore, SCAG staff does not recommend a reduction to the jurisdiction’s RHNA allocation based on these factors.

Issue 3: Affirmatively furthering fair housing.

The City claims that, with a RHNA allocation of 2,039 low and very low-income units, if allocated to the 114.6 acres across the seven sites discussed above in Issue 2, this would result in an excessive concentration of low-income units and thus a segregated living pattern.

SCAG Staff Response: SCAG recognizes that HCD’s regional target for affordable units in particular can be especially difficult given the challenges inherent in promoting and financing affordable development. While a demonstration of these challenges are not a basis for an appeal, they are noted in Fountain Valley’s appeal letter. Based on the RHNA methodology’s social equity adjustment, Fountain Valley’s share of units by income is comparable to the SCAG region share:

	Fountain Valley draft allocation	SCAG regional determination
Very-low income	27.0%	26.2%
Low income	16.2%	15.4%
Moderate Income	17.2%	16.7%
Above-moderate Income	39.5%	41.7%

Ultimately, the RHNA determination for the region as well as the social equity adjustment component of SCAG’s methodology both promote a mix of development types.

Government Code 65584(3), which describes AFFH, includes wide-ranging objectives:

“(e) For purposes of this section, “affirmatively furthering fair housing” means taking meaningful actions, in addition to combating discrimination, that overcome patterns of segregation and foster inclusive communities free from barriers that restrict access to opportunity based on protected characteristics. Specifically, affirmatively furthering fair housing means taking meaningful actions that, taken together, address significant disparities in housing needs and in access to opportunity, replacing segregated living patterns with truly integrated and balanced living patterns, transforming racially and ethnically concentrated areas of poverty into areas of opportunity, and fostering and maintaining compliance with civil rights and fair housing laws.”

A particular point of emphasis in AFFH is access to opportunity, which is included in SCAG’s RHNA methodology through the use of opportunity scores. This factor was a point of emphasis in HCD’s finding that SCAG’s methodology furthered the statutory objectives of RHNA (attached). Fountain Valley compares positively to the region with 12.3% of residents living in low/very-low opportunity areas (compared to an average across SCAG jurisdictions of 30%) and 67% of residents living in high/very-high opportunity areas (compared to an average across SCAG jurisdictions of 49%). This comparison of opportunity measures suggests that Fountain Valley compares adequately or favorably to the region and as such additional affordable units in Fountain Valley would increase region-wide access to opportunity. As such, SCAG staff does not recommend a reduction to Fountain Valley’s RHNA allocation based on this appeal’s claim of potential segregation resulting from its allocation of lower-income units.

Issue 4: Changed Circumstances [Government Code 65584.05(b)].

Fountain Valley notes that there was an error in their submitted replacement need survey which would reduce their replacement need from 21 units to 0 units.

Fountain Valley also asserts that the COVID-19 pandemic is causing additional uncertainty in planning, including the move of many to remote work and the potential for additional housing development capacity due to reduced demand for the City's office land uses.

SCAG Staff Response: Fountain Valley submitted a timely replacement needs survey indicating that over 2009-2018, 29 housing units were demolished, and 8 new units were built on those sites. As such, and per SCAG's RHNA methodology, the City received a replacement need adjustment totaling 21 units. The City's replacement need data have been posted in the SCAG website since at least October 2019 in the draft RHNA methodology data appendix.

While Fountain Valley has provided an updated table indicating that the net replacement need should be reduced from 21 to 0, additional documentation supporting this change is not provided. Since these city-submitted data have been posted publicly for almost a year prior to the distribution of the draft RHNA allocation, there was sufficient time and transparency to correct any mistakes by the jurisdiction. However, since draft RHNA allocations have already been issued, it is no longer possible to make any changes without impacting the RHNA allocations of other jurisdictions. As such, SCAG does not recommend changing Fountain Valley's replacement need adjustment without additional documentation regarding the 21 sites referenced.

While we recognize that COVID-19 presents unforeseen circumstances, these facts, as presented by the City, do not "merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04(b)." Section 65584.05(b) requires that:

"Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584."

SCAG's Regional Council delayed the adoption of its 2020-2045 RTP/SCS by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, the document's long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report¹ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e., the SCAG's region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region's long-term competitiveness or the region's employment outlook for 2023-2045. As such, SCAG's assessment is that comparable data would not suggest long-range regional employment declines.

¹ See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579

The COVID-19 pandemic has had various impacts throughout Southern California, however it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

Fountain Valley's appeal describes the impacts of COVID-19 in general terms, and also suggests that they may present even more housing development opportunities due to shifts to remote working. As such, the City's appeal has not met the requirement above and SCAG staff does not recommend a reduction in the jurisdiction's RHNA allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

ATTACHMENT(S):

1. Local Input and Development of Draft RHNA Allocation (City of Fountain Valley)
2. Appeal Form and Supporting Documentation (City of Fountain Valley)
3. Comments Received During the Comment Period (General)

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Fountain Valley had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Fountain Valley’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Fountain Valley, the anticipated number of households in 2020 was 18,898

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>

and in 2030 was 19,082 (growth of 184 households). In March 2018, SCAG staff and CDR staff met with staff from the City of Fountain Valley to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Fountain Valley submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions

were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmdm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Fountain Valley and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Fountain Valley

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Fountain Valley received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Fountain Valley as summarized in the data and calculations in the tables below.

Fountain Valley city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	152
Percent of households who are renting:	30%
Housing unit loss from demolition (2009-18):	21
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	552
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	20.56%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	2,066,000
Share of region's job accessibility (population weighted):	0.44%
Jurisdiction's HQT population (2045):	30,248
Share of region's HQT population (2045):	0.30%
Share of population in low/very low-resource tracts:	12.30%
Share of population in very high-resource tracts:	19.00%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Fountain Valley city	
Forecasted household (HH) growth, RHNA period:	152
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	4
Replacement Need	21
TOTAL PROJECTED NEED:	177
Existing need due to job accessibility (50%)	1861
Existing need due to HQTAs pop. share (50%)	1237
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	1552
TOTAL EXISTING NEED	4650
TOTAL RHNA FOR FOUNTAIN VALLEY CITY	4827
Very-low income (<50% of AMI)	1304
Low income (50-80% of AMI)	784
Moderate income (80-120% of AMI)	832
Above moderate income (>120% of AMI)	1907

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 30,248 living within HQTAs, the City of Fountain Valley represents 0.30% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Fountain Valley’s median TAZ, it will be possible to reach 20.56% of the region’s jobs in 2045 within a 30-minute automobile commute (2,066,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 1,552 units assigned to the City of Fountain Valley.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF FULLERTON

Hearing Date: January 19, 2021

The City of Fullerton has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscscag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Fullerton submits an appeal and requests a RHNA reduction of 3,850 units (of its draft allocation of 13,180 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA - the adopted methodology is flawed.

B. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 19, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011921fullagn.pdf?1610770557>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

C. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the Final RHNA Methodology, the City's objection to the adopted Final RHNA Methodology for the 6th Cycle RHNA and its request to modify the methodology by removing the residual need component is not an eligible basis for appeal.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 19, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Roland Ok, Program Manager,
(213) 236-1819, ok@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Fullerton

RECOMMENDED ACTION:

Deny the appeal filed by the City of Fullerton to reduce its draft RHNA allocation by 3,850 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

RECOMMENDATION:

Deny the appeal filed by the City of Fullerton (the City) to reduce its draft RHNA allocation by 3,850 units and to modify the 6th Cycle RHNA methodology.

SUMMARY OF APPEAL:

The City of Fullerton requests a reduction of its Draft RHNA Allocation by 3,850 units (from 13,180 units to 9,330 units) and a modification of the 6th Cycle RHNA methodology to remove the residual need component based on the following issue:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA: The adopted methodology is flawed.

RATIONALE FOR STAFF RECOMMENDATION:

SCAG staff have reviewed the appeal and recommend no change to the City of Fullerton's Draft RHNA Allocation. The City's objection to the adopted Final RHNA Methodology for the 6th Cycle RHNA and its request to modify the 6th Cycle RHNA Methodology by removing the residual need component is not an eligible basis for appeal.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Fullerton (Final Determination of Appeals Decisions)

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the draft allocation for the City of Fullerton is provided below.

Total RHNA for the City of Fullerton: 13,180 units

Very Low Income: 3,190 units

Low Income: 1,985 units

Moderate Income: 2,267 units

Above Moderate Income: 5,738 units

Additional background information related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received During 45-Day Comment Period

No comments were received from local jurisdictions or the California Department of Housing and Community Development (HCD) during the 45-day public comment period described in Government Code section 65584.05(c) in specific regard the appeal filed by the City of Fullerton. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Cities Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].

The City of Fullerton understands that addressing both projected and existing housing need are critical components for engaging the on-going housing crisis in the SCAG region and throughout the State of California but the process for the redistribution of residual existing need is flawed and must be excluded from the RHNA Methodology. The City requests that all residual need units assigned through the Draft RHNA Allocation be returned to each originating jurisdiction and that its Draft RHNA Allocation be reduced by 3,850 units.

SCAG Staff Response: Any appeal that cites the adopted RHNA methodology as its basis must focus the appeal on the application of the RHNA methodology, not on the methodology itself. An example of misapplication of the adopted methodology might be a data error identified by a local jurisdiction. The City, however, takes issue with the redistribution of residual existing need which is part of the adopted Final RHNA Methodology, and not application of the methodology.

RHNA includes five statutory objectives: 1) to increase the housing supply and mix of housing types, tenure, and affordability within each region in an equitable manner; 2) to promote infill development and socioeconomic equity, protection of environmental and agricultural resources, and encourage efficient development patterns; 3) promote an improved intraregional relationship between jobs and housing; 4) allocate a lower proportion of housing need for income categories in jurisdictions that have a disproportionately high share in comparison to the county distribution; and 5) affirmatively furthering fair housing.

In pursuing these statutory objectives, the adopted RHNA Methodology has a clear delineation to determine whether a jurisdiction may be identified as a “Disadvantaged Community” (DAC). In the methodology, DACs where the calculated projected and existing need is higher than the jurisdiction’s household growth between 2020 and 2045 are considered as having “residual” existing need. Residual need was then subtracted from jurisdictional need in these cases so that the maximum allocation a DAC jurisdiction would receive for existing need is equivalent to its 2020 to 2045 household growth. Residual existing need was tabulated by county and then redistributed within the same county to non-DAC jurisdictions. The purpose of this was to further two of the five RHNA objectives: to avoid an overconcentration of lower income households where they are already located, and to affirmatively further fair housing.

In addition, as described in Attachment 1 (Local Input and Development of Draft RHNA Allocation), the Final RHNA Methodology was adopted by the SCAG Regional Council on March 5, 2020 and describes the various policy factors by which housing unit need is to be allocated across the region including projected household growth, access to jobs and transit, and housing vacancy rates. The RHNA Methodology makes extensive use of locally reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the RHNA Methodology was found by HCD to further the five statutory RHNA objectives largely due to its use of objective factors and, as such, SCAG may not consider factors differently from one jurisdiction to another.

In accordance with the RHNA Methodology, the City was redistributed an additional 3,850 units of residual existing need based on the job and transit access measures in the City. The City of Fullerton has not provided evidence of any misapplication of the RHNA Methodology, and for this reason, SCAG staff does not recommend approval of this appeal based on this factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Fullerton had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal). It also describes how the RHNA Methodology development process integrated this information to develop the City of Fullerton’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.¹ Each jurisdiction was provided a package of land use, transportation, environmental, and growth forecast data for their review and revision which was due on October 1, 2018.² While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR). Jurisdictions were informed of this arrangement by SCAG at the kickoff of the process. For the City of Fullerton, the projected number of households in 2020 was 47,686, and in 2030 was 49,614 (growth of 1,928 households). In March 2018, SCAG staff and CDR staff met with staff from the City of Fullerton to discuss the Bottom-Up Local Input and Envisioning Process and to answer questions.

¹ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. RHNA identifies anticipated housing need over a specified eight-year planning period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes may be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

² A detailed list of data reviewed during this process may be found in each jurisdiction’s Draft Data/Map Book: <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB 2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Fullerton submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections obtained through the Bottom-Up Local Input and Envisioning Process, and also features strategies for growth at the TAZ-level to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to help achieve the SCAG region's GHG reduction targets, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections may be accessed at:

<https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. With the release of the draft Connect SoCal, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management (SPM-DM) site: <http://spmDM.scag.ca.gov>. Updates were shared with local jurisdictions on technical refinements to

the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Fullerton and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- 1) *Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low- income households.*
- 2) *Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- 3) *Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- 4) *Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- 5) *Affirmatively furthering fair housing. (Govt. Code § 65584(d).)*

As explained in more detail below, the Draft RHNA Methodology, which was subsequently adopted as the Final RHNA Methodology, set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020: <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the SCAG Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology, which relied almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need”, which includes the number of housing units required to accommodate anticipated population growth over the eight-year RHNA planning period, and “existing need”, which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.³ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and “High Quality Transit Area” (HQTA) population based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from Connect SoCal’s Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The RHNA methodology is described in further detail at:

<https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Fullerton

³ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. “existing need”) and would not result in a change in regional population. For further discussion, see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Fullerton received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Fullerton as summarized in the data and calculations featured in the tables below.

Fullerton city statistics and inputs:		Calculation of Draft RHNA Allocation for Fullerton city	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	1591	Forecasted household (HH) growth, RHNA period:	1591
Percent of households who are renting:	48%	Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	51
Housing unit loss from demolition (2009-18):	-	Replacement Need	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	5,428	TOTAL PROJECTED NEED:	1641
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	17.05%	Existing need due to job accessibility (50%)	4143
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,713,000	Existing need due to HQTAs pop. share (50%)	3544
Share of region's job accessibility (population weighted):	0.99%	Net residual factor for existing need	3850
Jurisdiction's HQTAs population (2045):	86,632	<i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	
Share of region's HQTAs population (2045):	0.85%	TOTAL EXISTING NEED	11538
Share of population in low/very low-resource tracts:	33.46%	TOTAL RHNA FOR FULLERTON CITY	13180
Share of population in very high-resource tracts:	3.50%	Very-low income (<50% of AMI)	3190
Social equity adjustment:	150%	Low income (50-80% of AMI)	1985
		Moderate income (80-120% of AMI)	2267
		Above moderate income (>120% of AMI)	5738

The transit accessibility measure is based on the population anticipated to live in “High Quality Transit Areas” (HQTAs) in 2045 based on Connect SoCal’s designation of HQTAs and population forecasts. With a forecasted 2045 population of 86,632 living within HQTAs, the City of Fullerton will represent 0.85 percent of the SCAG region’s HQTAs population, which provides the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute commute time. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs located

within a specific jurisdiction. Specifically, the share of future (2045) regional jobs which may be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on job accessibility. From the City of Fullerton’s median TAZ, it will be possible to reach 17.05 percent of the region’s jobs in 2045 within a 30-minute automobile commute (1,713,000 jobs), based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs.

An additional factor was included in the methodology to account for RHNA Objective 5: to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the SCAG region that have been designated as “Disadvantaged Communities” (DACs) based on measures of access to opportunity (described in the Adopted RHNA Methodology), but also score highly in job and transit accessibility, may have their total RHNA allocations capped based on their long-range (2045) household growth forecast. This additional housing need, referred to as “residual need”, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above and resulted in an additional 3,850 units assigned to the City of Fullerton.

Please note that the above represents only a partial description of the key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF GARDEN GROVE

Hearing Date: January 25, 2021

The City of Garden Grove has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Garden Grove submits an appeal and requests a RHNA reduction of 2,813 units (of its draft allocation of 19,122 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle (2021 – 2029) - the "DAC" or Disadvantaged Communities adjustment places a disproportionate burden on Non-DAC jurisdictions which fall just below the 50% DAC threshold.
2. Changed circumstances - the COVID-19 pandemic has uniquely impacted its future employment and that this should lead to a reduction of the City's housing need.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 25, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna->

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

[abph012521fullagn.pdf?1611371866](https://scag.ca.gov/rhna-abph012521fullagn.pdf?1611371866)). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the adopted Final RHNA Methodology, the assertion that the application of the DAC adjustment was inequitable and disproportionate is a challenge to the Final RHNA Methodology, which was adopted in final form by the Regional Council on March 5, 2020. This is not a valid basis for an appeal as the adopted Final RHNA methodology cannot be revised by the RHNA Appeals Board.
- 2) Regarding changed circumstances, while the City of Garden Grove indicates that COVID-19 has resulted in job losses, it does not provide evidence as to how and why this information merits a revision of information used to determine housing need, per Government Code 65584.05(b)(3). In addition, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

During the appeals hearing, the Appeals Board requested additional information regarding use of data sets and whether the best data was used in the RHNA process to identify disadvantaged communities (DACs). SCAG staff indicated that data sets change all the time, including how affordability criteria are calculated which could change SCAGs calculations in unpredictable ways. SCAG emphasized that consistent use of data and cut off for when data is available is part of the RHNA Methodology and process and therefore is not subject to appeal during the current appeal process.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 25, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Kevin Kane, Senior Regional Planner,
(213) 236-1828, kane@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Garden Grove

RECOMMENDED ACTION:

Deny the appeal filed by the City of Garden Grove to reduce the Draft RHNA Allocation for the City of Garden Grove by 2,813 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Garden Grove requests a reduction of its RHNA allocation by 2,813 units (from 19,122 units to 16,309 units). Garden Grove bases its appeal on the following:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle (2021 – 2029) - the "DAC" or Disadvantaged Communities adjustment places a disproportionate burden on Non-DAC jurisdictions which fall just below the 50% DAC threshold.
2. Changed circumstances - the COVID-19 pandemic has uniquely impacted its future employment and that this should lead to a reduction of the City's housing need.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Garden Grove's RHNA allocation.

Regarding Issue 1, the assertion that the application of the DAC adjustment was inequitable and disproportionate is a challenge to the Final RHNA methodology, which was adopted in final form by the Regional Council on March 5, 2020. This is not a valid basis for an appeal as the adopted Final RHNA methodology cannot be revised by the RHNA Appeals Board.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Garden Grove (Final Determination of Appeals Decisions)

Regarding Issue 2, while the City of Garden Grove indicates that COVID-19 has resulted in job losses, it does not provide evidence as to how and why this information merits a revision of information used to determine housing need, per Government Code 65584.05(b)(3).

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Garden Grove: 19,122 units
 Very Low Income: 4,155 units
 Low Income: 2,795 units
 Moderate Income: 3,204 units
 Above Moderate Income: 8,968 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Garden Grove. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].

The City of Garden Grove raises issues related to the “DAC adjustment.” The City contends that in its application, an exemption for five of the 35 Orange County jurisdictions inequitably redistributes 24% of the County’s total allocation to the 30 “non-DAC” jurisdictions based on their job and transit accessibility measures. Relatedly, the City claims that the 2019 state Tax Credit Allocation Commission (TCAC) data are being used outside their intended purpose.

The City, with 48% of its population in a low or very-low resourced area, requests that a “sliding scale exemption” would result in a more equitable distribution of housing need based on this criterion rather than an all-or-nothing approach.

Furthermore, the City claims that SCAG failed to adequately consider information submitted and available to SCAG prior to the adoption of the RHNA Methodology. Specifically, Garden Grove uses data from the websites of the 5 DAC jurisdictions in Orange County to suggest that their planned and approved units as of September 2020 exceed their 6th cycle RHNA allocation.

SCAG Staff Response:**RHNA Methodology and AFFH Objectives**

SCAG’s adopted RHNA Methodology balanced a wide range of policy and statutory objectives (i.e., the objectives set forth in Government Code section 65584(d)). For example, the methodology incorporates locally envisioned growth from Connect SoCal, recognizes the importance of job and transit access in future housing planning, and demonstrates a commitment to social equity in the form of the social equity adjustment and the reallocation of residual housing need in lower-resourced jurisdictions to higher-resourced jurisdictions.

With respect to the statutory objectives, SCAG used objective measures to advance certain principles, but since local and regional conditions vary tremendously across the state and over time, there are few consistent quantitative standards which can be used to evaluate all aspects of the methodology. Ultimately, however, the RHNA statute vests HCD with the authority to decide whether statutory objectives have been met. On January 13, 2020, HCD found that SCAG’s (then draft) 6th cycle Methodology advanced all five statutory objectives of RHNA.¹

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental

Affirmatively Furthering Fair Housing (AFFH) is a RHNA objective, and the residual reallocation is part of the adopted Final RHNA Methodology. The DAC adjustment is a feature of the RHNA Methodology whereby lower-resourced jurisdictions, as measured by having 50% or more of their population within low or very-low resource areas using the 2019 state Tax Credit Allocation Commission (TCAC) opportunity mapping indicators, have a cap on their RHNA Allocation based on their 2020-2045 local input-based growth forecast. Government Code section 65584.04(i) vests authority to assess whether a methodology furthers the statutory objectives in HCD. In HCD's comment letter dated December 20, 2020 (HCD Comment Letter), HCD specifically explains that the cap on units allocated to DACs furthers the AFFH statutory objective:

“Among the appeals based on Government Code section 65584.05(b)(2), several contend that the cap on units allocated to extremely disadvantaged communities (DACs) does not further RHNA's statutory objectives. This cap furthers the statutory objective to affirmatively further fair housing by allocating more units to high opportunity areas and fewer units to low resource communities, and concentrated areas of poverty with high levels of segregation. Due to the inclusion of this factor, as well as the use of TCAC/HCD Opportunity Maps, SCAG's methodology allocates 14 of the top 15 highest shares of lower-income RHNA to jurisdictions with over 99.95 percent High and Highest Resource areas. With the exceptions of two jurisdictions, the 31 jurisdictions with the highest share of lower-income RHNA are all over 95 percent High and Highest Resource areas. Any weakening of these inputs to the methodology could risk not fulfilling the statutory objective to affirmatively further fair housing.” (HCD Comment Letter at p.2).

Furthermore, in HCD's January 13, 2020 letter approving the Draft RHNA Methodology (HCD RHNA Methodology Letter) (attached), HCD finds that SCAG's RHNA Methodology furthers all five statutory objectives, stating,

“HCD applauds the inclusion of the affirmatively furthering fair housing adjustment factor in the methodology. This factor directs more lower income RHNA to higher opportunity areas and reduces allocations in segregated concentrated areas of poverty, as defined in the *HCD/TCAC Opportunity Maps*, which evaluate access to opportunity, racial segregation, and concentrated poverty on 11 dimensions, which

and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

are all evidence-based indicators related to long term life outcomes.” (HCD RHNA Methodology Letter at p.1) (emphasis added and footnote omitted).

Opportunity Mapping Data and “Sliding Scale” Proposal

While the City argues that the TCAC’s Opportunity Mapping Tool was never intended to identify jurisdictions with more than 50% of their population located in DACs, HCD, the co-creator of this data source, has found that the tool’s use for this purpose to be a critical component in SCAG’s RHNA Methodology and furthers the AFFH statutory objective. The 2019 opportunity mapping data been part of several proposed variations of SCAG’s RHNA Methodology as they underwent review during 2019 and also went through an extensive development and public review process during their development by the California Fair Housing Task Force (see <https://www.treasurer.ca.gov/ctcac/opportunity.asp>) and vetting through TCAC and HCD.

The City proposes an alternative method for measuring advantage or disadvantage in a jurisdiction which involves utilizing a “sliding scale exemption”. However, an appeal citing RHNA Methodology as its basis must appeal the application of the adopted Methodology, not the Methodology itself. An example of an improper application of the adopted Methodology might be a data error which was identified by a local jurisdiction, not the presentation of an alternative methodology.

Information Submitted and/or Available Regarding DAC Jurisdictions

Attachment 1 describes SCAG’s Bottom-Up Local Input and Envisioning Process in detail. All local jurisdictions were provided the same opportunity to comment on and provide additional information regarding anticipated population, household, and employment growth. In order to ensure ample time for required modeling analyses and public review, data inputs were due in October 2018, with two subsequent opportunities for providing technical refinements in December 2019 and June 2020 (jurisdiction-level growth totals could *not* be changed during these opportunities). These data constitute what was submitted to SCAG described in 65584.04(e).

The RHNA statute provides defined timeframes guided by the deadline for the housing element revisions² for HCD’s RHNA determination and SCAG’s Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region’s existing and projected housing need pursuant to Section 65584.01 at least **two years prior** to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This “determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of

² Currently, local governments within the jurisdiction of SCAG are required to adopt their sixth revision of the housing element on or before October 15, 2021. Govt. Code § 65588(e)(2)(II).

governments.” Govt. Code § 65584.01(b). HCD begins the process **26 months prior** to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the RHNA allocation methodology up to **30 months prior** to the scheduled revision. By necessity, the data used for these processes is data available at that time.

Under the constraints of the timeframe and considering the comprehensive and equitable process whereby local input had already been solicited, submitted, and included in the RHNA methodology, SCAG does not have a responsibility or the authority to include every piece of information “available” as Garden Grove contends. SCAG relies on the local input process for jurisdictions to provide the most accurate and relevant information for SCAG to consider in its growth forecast.

SCAG staff does not recommend a reduction on the basis of new information regarding the websites of the 5 DAC jurisdictions in Orange County since the information is not related to the City of Garden Grove. Government code 65584.05(b)(1) permits a jurisdiction to appeal the Draft RHNA Allocation of another jurisdiction on the same grounds. Garden Grove has filed a separate appeal of Santa Ana’s Draft RHNA Allocation, requesting an increase of 7,087 units, also contending that SCAG failed to adequately consider housing development data in the City of Santa Ana. These issues are addressed in the appeal of Santa Ana’s Draft RHNA Allocation.

Issue 2: Changed circumstances [Government Code 65584.05(b)].

The City of Garden Grove claims that a change in circumstances warrants a revision to the Draft RHNA Allocation. The COVID-19 pandemic has resulted in a “significant and unforeseen” change in circumstance since employment projection data were submitted in 2018 which result in an anticipated decrease in the City’s 2020-2030 job forecast by 1,746 jobs.

SCAG Staff Response: Citing the Covid-19 pandemic, the City asserts that changed circumstances merit revisions to data previously relied upon. The City states that nearly 2,800 service jobs have been lost and as such the 2020-2030 employment outlook for the City is 1,746 jobs lower than it previously had been.

First, while SCAG staff recognizes that COVID-19 presents unforeseen circumstances and that local governments have been affected by significant unemployment, these facts, as presented by the City, do not “merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04” (Government Code section 65584.05(b)(3)). Furthermore, section 65584.05(b) requires that,

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation,

and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

Such comparable data is not provided by the City of Garden Grove.

In fact, SCAG’s Regional Council delayed the adoption of the 2020 RTP/SCS by 120 days in order to assess the impact of COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report³ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e., the SCAG’s region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region’s long-term competitiveness or the region’s employment outlook for 2023-2045. As such, SCAG’s assessment is that comparable data would not suggest long-range regional employment declines.

Secondly, the City of Garden Grove suggests that the loss of employment in the City should reduce its housing need by 1,512 units. However, no evidence is provided that this loss of jobs will reduce housing need. While the City references the RHNA objective regarding regional jobs-housing relationships (Government Code § 65584(d)(3)) as a basis for this connection, SCAG’s RHNA Methodology addresses this statutory objective through the job accessibility measure—in large part due to the fact that 80 percent of the SCAG region’s workers live and work in different jurisdictions. Specifically, the City’s share of regional job accessibility is used to allocate housing units. This measure indicates that 2,175,000 future jobs (21.64% of the region’s total employment of 10,049,000) can be accessed within a 30-minute AM peak automobile commute. Note that as discussed above, HCD found that the Draft Methodology furthers the five statutory objectives of RHNA, including promoting an improved intraregional relationship between jobs and housing.

Assuming *arguendo* Garden Grove’s reduction of future employment by 1,746, this would mean that 2,173,254 future jobs (21.63% of the regional total) would be accessible. Using the largest city job loss figure referenced in the City’s appeal of 4,500 jobs, future Garden Grove residents would still be able to access 21.60% of the region’s jobs. Such a change would result in an extremely small decrease in Garden Grove’s share of regional job access. However, Garden Grove asserts that this job reduction has crippled the tourism economy more broadly and can reasonably be assumed to decrease jobs outside of the City as well. As such, it cannot be assessed from the evidence provided how the City’s job accessibility relative to the region would decrease.

Ultimately, these issues do not “merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04(b).” (Government Code section 65584.05(b)(3)). The inputs to

³ See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf?1606001579

the RHNA Methodology are not impacted by these purported changes in circumstance and SCAG staff does not recommend a reduction of the City of Garden Grove's Draft RHNA Allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Garden Grove had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Garden Grove's Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁴ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁵ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Garden Grove, the anticipated number of households in 2020 was 46,870 and in 2030 was 48,350 (growth of 1,480 households). In March 2018, SCAG staff and CDR staff met

⁴ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁵ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

with staff from the City of Garden Grove to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the Draft RHNA Methodology. The City of Garden Grove submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Garden Grove and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁶ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁶ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e., "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Garden Grove

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Garden Grove received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Garden Grove as summarized in the data and calculations in the tables below.

Garden Grove city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	1221
Percent of households who are renting:	46%
Housing unit loss from demolition (2009-18):	253
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	2,421
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	21.64%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	2,175,000
Share of region's job accessibility (population weighted):	1.48%
Jurisdiction's HQT population (2045):	135,945
Share of region's HQT population (2045):	1.33%
Share of population in low/very low-resource tracts:	47.92%
Share of population in very high-resource tracts:	0.00%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Garden Grove city	
Forecasted household (HH) growth, RHNA period:	1221
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	38
Replacement Need	253
TOTAL PROJECTED NEED:	1512
Existing need due to job accessibility (50%)	6172
Existing need due to HQTAs pop. share (50%)	5561
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	5877
TOTAL EXISTING NEED	17611
TOTAL RHNA FOR GARDEN GROVE CITY	19122
Very-low income (<50% of AMI)	4155
Low income (50-80% of AMI)	2795
Moderate income (80-120% of AMI)	3204
Above moderate income (>120% of AMI)	8968

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 135,945 living within HQTAs, the City of Garden Grove represents 1.33% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Garden Grove’s median TAZ, it will be possible to reach 21.64% of the region’s jobs in 2045 within a 30-minute automobile commute (2,175,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 5,877 units assigned to the City of Garden Grove.

Please note that the above represents only a partial description of key data and calculations which result in the Draft RHNA Allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF GARDENA

Hearing Date: January 13, 2021

The City of Gardena has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG’s Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Gardena submits an appeal and requests a RHNA reduction of 1,144 units (of its draft allocation of 5,721 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - principles of affirmatively further fair housing were not applied appropriately and the City received a higher share total allocation.
2. Availability of land suitable for urban development or for conversion to residential use – the City does not have available land suitable for additional housing nor can they accommodate higher-density housing.
3. Affirmatively furthering fair housing - the City received a disproportionate amount of very low-and low-income housing, and when compared to other cities in the South Bay region.

B. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 13, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph011321fullagn_0.pdf?1609982874). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

C. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) and 3) Regarding application of the Final RHNA Methodology and affirmatively furthering fair housing, the City has not provided evidence that the RHNA methodology disproportionately added an overconcentration of lower income households to the City nor that its total allocation is too high.
- 2) Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 13, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Roland Ok, Program Manager II,
(213) 236-1819, ok@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Gardena

RECOMMENDATION:

Deny the appeal filed by the City of Gardena to reduce the Draft RHNA Allocation by 1,144 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California’s policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Gardena requests a reduction of its RHNA allocation by 1,144 units (from 5,721 units to 4,577 units) based on:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - principles of affirmatively further fair housing were not applied appropriately and the City received a higher share total allocation.
- 2) Availability of land suitable for urban development or for conversion to residential use – the City does not have available land suitable for additional housing nor can they accommodate higher-density housing.
- 3) Affirmatively furthering fair housing - the City received a disproportionate amount of very low-and low-income housing, and when compared to other cities in the South Bay region.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Gardena RHNA allocation.

Issues 1 and 3: The City has not provided evidence that the RHNA methodology disproportionately added an overconcentration of lower income households to the City nor that its total allocation is

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California’s Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Gardena (Final Determination of Appeals Decisions)

too high. As such, we do not recommend granting an appeal on these bases.

Issue 2: The City has not provided evidence that it could not identify opportunity areas to provide for additional housing. As such, we do not recommend granting an appeal on these bases.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA Allocation for the City of Gardena: 5,721

Very Low Income: 1,481

Low Income: 759

Moderate Income: 892

Above Moderate Income: 2,589

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Gardena. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issues 1 and 3: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)] and affirmatively furthering fair housing.

The City of Gardena argues that it has received a higher share of RHNA numbers that exceed other cities within the South Bay Cities COG region. The City states that out of the 15 cities in the South Bay region, Gardena has the third highest proportion of very-low-income percentage (29%), the fourth highest percentage of minority population (90.3%), the third highest percentage living below the poverty line (15%). The City argues that the combined effect of allocating Gardena a large RHNA obligation and existing concentration of low-income households would further exacerbate the current inequalities in access to opportunities, which would contract the principle to affirmatively further fair housing.

SCAG Staff Response: SCAG’s final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD’s regional housing needs determination. Only improper application of the methodology is grounds for an appeal. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction.

With respect to the statutory objectives, SCAG used objective measures to advance certain principles, but since local and regional conditions vary tremendously across the state and over time, there are few consistent quantitative standards which can be used to evaluate all aspects of the methodology. Ultimately, however, the RHNA statute vests HCD with the authority to decide whether statutory objectives have been met.

As described in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the RHNA methodology was found by HCD to further the five statutory objectives¹ in large part due to its use of objective factors and as such cannot consider factors differently in one jurisdiction versus another.

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an

Whether a jurisdiction's Draft RHNA Allocation is higher or lower depends on these factors as reflected in the data (see Attachment 1 for further details) – principally its growth forecast, job access, and transit access. The City includes a table of several nearby cities which compares their Draft RHNA Allocations versus their existing housing stocks and current populations, arguing that Gardena's RHNA number is unfairly high compared to its neighbors when making these comparisons. However, the City's Draft RHNA Allocation is the outcome of the policy factors used to allocate RHNA. For example, while Torrance has a lower Draft RHNA Allocation compared to its existing housing stock, this is because compared to Gardena it has poorer job access (11.00% versus 16.99% of the region's future jobs accessible within 30 minutes) and less future population in HQTAs (0.33% of the region's versus 0.63%). As such, the Methodology is applied equally – the underlying policy factors differ between these cities and RHNA as a percentage of existing housing stock or existing population are not policy factors considered in SCAG's adopted Final RHNA Methodology.

One of the five objectives of RHNA law is to ensure that the RHNA allocation plan allocates “a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category”.

While SCAG staff accepts the assertion that the jurisdiction has a currently disproportionately high percentage of lower income households in comparison to its surrounding cities and counties, the RHNA methodology addresses this disparity through its social equity adjustment and inclusion of access to resources as an influencing factor.

To further the objectives of allocating a lower proportion of households by income and affirmatively furthering fair housing (AFFH), the RHNA methodology includes a minimum 150 percent social equity adjustment and an additional 10 to 30 percent added in areas with significant populations that are defined as very low or very high resource areas, referred to as an AFFH adjustment. A social equity adjustment ensures that jurisdictions accommodate their fair share of each income category. It does so by adjusting current household income distribution in comparison to county distribution. The result is that jurisdictions that have a higher concentration of lower income households than the county will receive lower percentages of RHNA for the lower income categories. For the City of Gardena, 26% of the jurisdiction's draft RHNA allocation is assigned for the very low-income category, which is lower than its current 29% and lower than the county distribution of 28%. Thus, the Final RHNA Methodology, and by extension the jurisdiction's Draft RHNA Allocation, has already considered this objective to ensure that there is not an overconcentration of lower income

improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

households in these currently impacted areas. For this reason, SCAG staff does not recommend a reduction to the jurisdiction's Draft RHNA Allocation based on this factor.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City of Gardena claims that SCAG failed to address the availability of land suitable for urban development or conversion to residential use. Gardena states that the City has minimal appropriate, available vacant land to accommodate its RHNA allocation. The City argues that the only way to accommodate its allocation is by placing a housing overly on commercial and industrial zones (of which 88 acres is available would be available for housing). According to the City, this would cause a jobs-housing imbalance, overcrowding, create a loss of revenue, and result in high density housing (65 units/acre) in already poverty-stricken areas.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. While the City's initial assessment of 88 acres for housing is acknowledged, alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City's projected growth.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to determine RHNA need at the jurisdictional level. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land

use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

The City's concern regarding jobs-housing imbalance is acknowledged. However, the adopted RHNA methodology includes a calculation of job accessibility as one of the factors to determine a jurisdiction's draft RHNA allocation. Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute (additional details are found in the adopted RHNA methodology). This is not a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents, which can include jobs outside of the jurisdiction. Over 80 percent of SCAG region workers live and work in different jurisdictions, which calls for an approach to the region's job housing relationship through the measurement of access rather than number of jobs within a certain jurisdiction. Limiting a jobs housing balance solely within jurisdictions can effectively worsen a regional jobs housing balance and thus SCAG staff does not recommend a reduction/increase to the jurisdiction's draft RHNA allocation based on this factor.

While SCAG acknowledges Gardena's concerns regarding overcrowding, overcrowding is defined as more than 1.01 persons per room (not bedroom) in a housing unit and as part of the regional determination, HCD applied an overcrowding component. Similar to cost-burden, overcrowding is caused by an accumulated housing supply deficit and is considered an indicator of regional existing housing need. However, it is impossible to determine how and why the overcrowding is occurring in a particular jurisdiction. A jurisdiction that has an overcrowding rate higher than the regional average might be issuing more residential permits than the regional average while the surrounding jurisdictions might not have overcrowding issues but issue fewer permits than the regional average. Because overcrowding is already addressed as a regional existing need and at a jurisdictional level may not be a cause of existing need, SCAG staff does not recommend a change to the jurisdiction's Draft RHNA Allocation based on this factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

5. Attachment 5_Comments Received During the Comment Period (General)

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Gardena had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Gardena’s Draft RHNA Allocation.

1. Local Input

a. *Bottom-Up Local Input and Envisioning Process*

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal) and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG’s preliminary growth forecast information. For the City of Gardena, the anticipated number of households in 2020 was 21,333 and in 2030 was 22,414 (growth of 1,081 households). On April 26, 2018, SCAG staff met with staff from the City of Gardena to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input from

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

the City of Gardena on the growth forecast was received in September 2018. Following input, household totals remained the same.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey, Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Gardena submitted the following surveys prior to the adoption of the Draft RHNA Methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. The City of Gardena's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e., "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Final RHNA Methodology and Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the Covid-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Gardena received its Draft RHNA Allocation on September 11, 2020. Application of the RHNA methodology yields the Draft RHNA Allocations for the City of Gardena as summarized in the data and in the tables below.

City of Gardena Statistics and Inputs		Calculation of Draft RHNA Allocation for Gardena	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	892	Forecasted household (HH) growth, RHNA period:	892
Percent of households who are renting:	50%	Vacancy Adjustment: <i>(5% for renter households and 1.5% for owner households)</i>	29
Housing unit loss from demolition (2009-18):	23	Replacement Need:	23
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	2,452	TOTAL PROJECTED NEED:	944
Percent of regional jobs accessible in 30 mins (2045): <i>(From the jurisdiction's median TAZ)</i>	16.99%	Existing need due to job accessibility (50%):	1,713
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,707,000	Existing need due to HQTAs pop. share (50%):	2,652
Share of region's job accessibility (population weighted):	0.41%	Net residual factor for existing need: <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent the amount being redistributed to higher-resourced communities based on their job and/or transit access)</i>	412
Jurisdiction's HQTAs population (2045):	64,821	TOTAL EXISTING NEED:	4,777
Share of region's HQTAs population (2045):	0.63%	TOTAL RHNA FOR THE CITY OF GARDENA:	5,721
Share of population in low/very low-resource tracts:	40.21%	Very-low income (<50% of AMI):	1,481
Share of population in very high-resource tracts:	0.00%	Low income (50-80% of AMI):	759
Social equity adjustment:	150%	Moderate income (80-120% of AMI):	892
		Above moderate income (>120% of AMI)	2,589

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 64,821 living within HQTAs, the City of Gardena represents 0.63% of the SCAG region's HQTA population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on transit accessibility. From the City of Gardena median TAZ, it will be possible to reach 16.99% of the region's jobs in 2045 within a 30-minute automobile commute (1,707,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 412 units assigned to the City of Gardena.

Please note that the above represents only a partial description of key data and calculations in the Final RHNA Methodology. The attached maps provide further detail regarding transit and job access measures.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF HEMET

Hearing Date: January 6, 2021

The City of Hemet has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Hemet submits an appeal and requests a RHNA reduction of 2,824 units (of its draft allocation of 6,450 units). The grounds for appeal are as follows:

- 1) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - methodology does not further the five objectives listed in Government Code Section 65584(d) and requests an alternative methodology be adopted.
- 2) Existing or projected jobs-housing balance - requests SCAG consider a methodology that focuses on the region's job-housing balance.
- 3) Sewer or water infrastructure constraints - number of units allotted is unobtainable as water and stormwater infrastructure is not available or too costly to build.
- 4) The region's greenhouse gas emissions targets - adding 6,450 residential units to an area with few jobs and transit options would increase highway congestion, reduce air quality, lengthen commute times, increase VMT, and thereby be inconsistent with achieving the region's GHG reduction targets.
- 5) Affirmatively further fair housing - RHNA allocation does not consider socio-economic disadvantages specific to the City and the unintended consequences of overconcentrating low-income housing and therefore does not affirmatively further fair housing.

A. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 6, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing

comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010621fullagn.pdf?1609379165>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding application of the Final RHNA Methodology, statute vests HCD with the authority to decide whether statutory objectives were met by the Final RHNA Methodology, and HCD made this determination. Also, the City is challenging the content of the adopted Final RHNA Methodology rather than the application of the methodology, and it presents alternative methodologies which cannot be considered as bases for an appeal.
- 2) Regarding job housing balance, the RHNA methodology already includes job access as a primary factor in determining a jurisdiction's draft RHNA allocation at the regional level.
- 3) Regarding sewer or water infrastructure constraints, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction and evidence from a utility service provider that would preclude the construction of new housing was not demonstrated.
- 4) Regarding the region's greenhouse gas emissions targets, the jurisdiction's RHNA allocation was assigned in a manner consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy ("Connect SoCal"), which includes the GHG emission reduction targets for the region.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

- 5) Regarding affirmatively further fair housing, the RHNA methodology addresses regional socio-economic disparity through its social equity adjustment.

During the appeals hearing, the City raised a number of issues that were addressed by staff in more detail including (1) one of the City's three water providers issued a moratorium on providing new service to developments over 4 units; (2) an earthquake could result in the collapse of the East Dam of Diamond Valley Lake (located on the south eastern portion of Hemet), which would put areas of the City at risk of flooding; and (3) a portion of their City is within the Hemet-Ryan Airport Compatibility zone.

SCAG staff made the following points as to why these issues do not affect the City's ability to accommodate their RHNA allocation:

- 1) Regarding the water moratorium, the City did not provide documentation to demonstrate that their RHNA allocation could not be accommodated in other areas of the City that do have water availability.
- 2) With regards to the risk of flooding, the jurisdiction did not provided evidence that the Federal Emergency Management Agency (FEMA) or the Department of Water Resources (DWR) has determined that flood management infrastructure is inadequate to avoid the risk of flooding.
- 3) Regarding the airport restrictions, the City did not provide documentation to demonstrate that their RHNA allocation could not be accommodated in other areas of the City that do have airport restrictions.

The Appeals Board in denying the RHNA appeal confirmed that the conclusions of the staff report remain appropriate and these additional issues do not warrant a revision of the City's RHNA allocation.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Hemet

RECOMMENDED ACTION:

Deny the appeal filed by the City of Hemet (the City) to reduce the draft RHNA allocation for the City by 2,824 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Hemet requests a reduction of its RHNA allocation by 2,824 units (from 6,450 units to 3,626 units) based on the following issues:

- 1) Application of adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) - methodology does not further the five objectives listed in Government Code Section 65584(d) and requests an alternative methodology be adopted.
- 2) Existing or projected jobs-housing balance - requests SCAG consider a methodology that focuses on the region's job-housing balance.
- 3) Sewer or water infrastructure constraints - number of units allotted is unobtainable as water and stormwater infrastructure is not available or too costly to build.
- 4) The region's greenhouse gas emissions targets - adding 6,450 residential units to an area with few jobs and transit options would increase highway congestion, reduce air quality, lengthen commute times, increase VMT, and thereby be inconsistent with achieving the region's GHG reduction targets.
- 5) Affirmatively further fair housing - RHNA allocation does not consider socio-economic disadvantages specific to the City and the unintended consequences of overconcentrating low-income housing and therefore does not affirmatively further fair housing.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Hemet (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Hemet’s RHNA allocation. Regarding Issue 1, statute vests HCD with the authority to decide whether statutory objectives were met by the RHNA Methodology, and HCD made this determination. Also, the City is challenging the content of the adopted RHNA Methodology rather than the application of the methodology, and it presents alternative methodologies which cannot be considered as bases for an appeal. Regarding Issue 2, the RHNA methodology already includes job access as a primary factor in determining a jurisdiction’s draft RHNA allocation. Regarding Issue 3, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction and evidence from a utility service provider that would preclude the construction of new housing was not demonstrated. Regarding Issue 4, the jurisdiction’s RHNA allocation was assigned in a manner consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (“Connect SoCal”), which includes the GHG emission reduction targets for the region. Regarding Issue 5, the RHNA methodology addresses regional socio-economic disparity through its social equity adjustment.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary of the draft allocation for the City of Hemet is provided below.

- Total RHNA for the City of Hemet: 6,450 units
 - Very Low Income: 810 units
 - Low Income: 730 units
 - Moderate Income: 1,171 units
 - Above Moderate Income: 3,739 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

One comment was received from a local jurisdiction during the 45-day public comment period described in Government Code section 65584.05(c) which specifically addresses the appeal filed by the City of Hemet:

- The City of Corona objects to receiving any potential reallocation of the draft RHNA allocation based on appeals filed by the City of Hemet and the County of Riverside.

In addition, three such comments were received which relate to SCAG 6th cycle appeals generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2020-2029)

The City contends that SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the Final RHNA Methodology in a manner that furthers the five objectives listed in Government Code Section 65584(d). The City suggests altering the methodology in order to meet these objectives.

SCAG Staff Response: An appeal citing the adopted RHNA Methodology as its basis must appeal the application of the methodology, not the methodology itself. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction. The City has not provided evidence of such a data error or any other misapplication of the adopted RHNA methodology, and thus, the City cannot appeal under this basis. Moreover, appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology and supported by adequate documentation.

Adopted by the SCAG Regional Council on March 5, 2020, the RHNA Allocation Methodology uses SCAG's Growth Forecast as the basis to determine the projected household need component of a jurisdiction's draft RHNA allocation. SCAG's Integrated Growth Forecast process was derived through a two-year process from October 2017 through December 2019 that was based on local input review through surveys and individual meetings with SCAG jurisdictions. As indicated in the background section of this report, SCAG staff fully considered the input provided by the City during the development of the Integrated Growth Forecast and incorporated this input into the

development of projected need for the City's draft RHNA Allocation. See also Attachment 1, Local Input and Development of Draft RHNA Allocation.

SCAG's adopted RHNA Methodology balanced a wide-range of policy and statutory objectives (i.e., the objectives set forth in Government Code section 65584(d)). For example, the methodology incorporates locally-envisioned growth from Connect SoCal, recognizes the importance of job and transit access in future housing planning, and demonstrates a commitment to social equity in the form of the social equity adjustment and the reallocation of residual housing need in lower-resourced jurisdictions to higher-resourced jurisdictions.

With respect to the statutory objectives, SCAG used objective measures to advance certain principles, but since local and regional conditions vary tremendously across the state and over time, there are few consistent quantitative standards which can be used to evaluate all aspects of the methodology. Ultimately, however, the RHNA statute vests HCD with the authority to decide whether statutory objectives have been met. On January 13, 2020, HCD found that SCAG's (then draft) 6th cycle methodology advanced all five statutory objectives of RHNA.

While the City presents ways to improve the methodology, it does not show how SCAG improperly applied the adopted RHNA Methodology. For this reason, SCAG staff does not recommend a reduction to its draft RHNA allocation based on this factor.

Issue 2: Existing or projected jobs-housing balance [Government Code Section 65584.04(e)(1)]

The City requests that SCAG consider a RHNA allocation for the City that focuses on the region's job-housing balance. The City of Hemet has a high imbalance of housing to nearby jobs with major job centers in Orange, Los Angeles, and San Diego Counties located two hours away leading to high unemployment rates in the City. Constructing high-density housing in an area where there are few jobs fails to recognize the market demand for affordable housing near job centers.

SCAG Staff Response: The 6th Cycle RHNA regional housing need total of 1,341,827 units, as determined by HCD, consists of both "projected need" and "existing need". The majority of the City of Hemet's RHNA allocation comes not from the City's proximity to jobs or transit but instead from its expected future growth or "projected need". As described in Attachment 1, among the total need of 6,450 units for the City of Hemet, the "projected need" for the city is 6,174 units. "Projected need" is intended to accommodate the growth of population and households within the city during the 2021-2029 RHNA period. This calculation is based on the household growth for the comparable RHNA period (2021 to 2029) of the regional transportation plan. See Attachment 1, "Local Input and Development of Draft RHNA allocation" which describes the extent of local engagement and review opportunities provided to local jurisdictions on the household growth forecast. Review opportunities began in October 2017. While the initial deadline for input was

October 2018, additional review opportunities were provided to all local jurisdictions through June 2020. Growth forecast data for the City of Hemet was reviewed and approved by the City in January 2019 (see Attachment 2, Data Verification Form).

The adopted RHNA methodology already includes job and transit accessibility as primary factors in determining a jurisdiction's draft RHNA allocation for "existing need". Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute (additional details are found in the adopted RHNA methodology). This is **not** a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents, which includes jobs outside of the jurisdiction. As described in Attachment 1, from the City of Hemet's median TAZ, it will be possible to reach 1.46% of the region's jobs in 2045 within a 30-minute automobile commute (146,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs). Therefore, the City only received a RHNA allocation of 277 units based on job accessibility. The City is not expected to have any share of the region's population in HQTAs in 2045, and therefore received zero units based on transit accessibility. Hence, the local jurisdiction's job-housing balance has already been accounted for in the approved RHNA methodology.

Issue 3: Sewer or water infrastructure constraints for additional development [Government Code Section 65584.04(e)(2)(A)]

The City contends that while land is available for housing, it has significant infrastructure constraints, particularly relating to water supply and stormwater drainage. In most instances the infrastructure is either not available or too expensive to build. Therefore, the number of units allotted to the City is unobtainable.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water constraints mentioned by the jurisdiction, it is not evident that any water provider has rendered a decision that would prevent the jurisdiction from providing necessary infrastructure. Costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not penalized for not developing the assigned units. For this reason, SCAG staff does not recommend a housing need reduction based upon this planning factor.

Issue 4: The region's greenhouse gas emissions targets [Government Code Section 65584.04(e)(12)]

The City of Hemet argues that it is located at the very end of the transportation network in Riverside County. Specifically, it is 20 minutes to the closest freeway, 30 minutes to the closest light rail, and

60 minutes away from any major employment center. Adding 6,450 residential units to an area with few jobs and transit options would only increase highway congestion, reduce air quality, lengthen commute times, increase VMT, and thereby be inconsistent with achieving the regions greenhouse gas reduction targets as provided by the State.

SCAG Staff Response: SCAG allocates both “projected need” and “existing need” in a manner that is consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal), which includes a GHG emission reduction target for the region. As described in Attachment 1, the majority of the City of Hemet’s RHNA allocation (6,174 units) comes from its expected future growth or “projected need” that was calculated using data that was reviewed and approved by the City in January 2019 (see Attachment 2, Data Verification Form). The 6th cycle RHNA does not change the population growth forecast from Connect SoCal for 2029 (end of RHNA period) or any other year including 2035 for which Connect SoCal is required to meet the greenhouse gas emissions target. The Connect SoCal Forecasted Regional Development Pattern is shown on Exhibit 1 of the Sustainable Communities Strategy Technical Report, p. 13. Specifically, the development pattern includes priority growth areas, incorporated areas, job centers, entitled projects and sphere of influence which together would accommodate 95% of the growth till 2045. The development pattern reflects the strategies and policies contained in Connect SoCal.

While RHNA would also require the City to address existing need (277 units), not included in Connect SoCal, those units are intended to serve the existing population and were allocated based on transit and job access measures derived from Connect SoCal data. Therefore, the RHNA methodology for “existing need” also promotes an efficient development pattern in utilizing public transit, reducing commute distance and contribute to further reduce per capita greenhouse gas emissions. Accordingly, the total allocation for regional housing need (“existing need” and “projected need”) is aligned with the strategies and policies underlying the development pattern in the Connect SoCal, and the RHNA allocation methodology is consistent with meeting the region’s GHG emissions target. For this reason, SCAG staff does not recommend a reduction to Hemet’s draft RHNA allocation based on this factor.

Issue 5: Affirmatively furthering fair housing

The City contends that SCAG failed to adequately consider information relating to affirmatively furthering fair housing pursuant to Government Code § 65584(b)(2) and 65584(d)(5). The City contends that the proposed RHNA allocation does not consider socio-economic disadvantages specific to the City and the unintended consequences of overconcentrating low-income housing. Specifically, the City of Hemet was allocated with 1,540 low-income units even though it has 98.7% of its population within a Low Resource Area, is considered a “disadvantaged community”, and has a medium household income that is significantly lower than its County of Riverside and the SCAG

region. The City further argues that the RHNA distribution across income categories for the social equity adjustment is not explained. Therefore, the City finds that the RHNA allocation does not affirmatively further fair housing.

SCAG Staff Response: One of the five objectives of RHNA law is to ensure that the RHNA allocation plan allocates “a lower proportion of housing need to an income category when a jurisdiction already has a proportionately high share of households in that income category”. While SCAG staff accepts the assertion that the jurisdiction has a currently disproportionately high percentage of lower income households in comparison to the County and the SCAG region, the RHNA methodology addresses this disparity through its social equity adjustment and inclusion of access to resources as an influencing factor.¹

To further the objectives of allocating a lower proportion of households by income and affirmatively furthering fair housing (AFFH), the RHNA methodology includes a minimum 150 percent social equity adjustment and an additional 10 to 30 percent added in areas with significant populations that are defined as very low or very high resource areas, referred to as an AFFH adjustment. A social equity adjustment ensures that jurisdictions accommodate their fair share of each income category. It does so by adjusting current household income distribution in comparison to county distribution. The result is that jurisdictions that have a higher concentration of lower income households than the county will receive lower percentages of RHNA for the lower income categories. For the City of Hemet, the maximum social equity adjustment of 180% was applied. Therefore, 59% of the jurisdiction’s draft RHNA allocation is assigned for above moderate income housing, 18% for moderate income, and only 11% for low income, and 12% for very-low income housing. The City’s RHNA allocation distribution is lower than its percentage of population currently in low and very-low resource census tracts (98.75%) as identified by the Tax Credit Allocation Committee (TCAC) opportunity scores used elsewhere in the RHNA methodology and lower than the County of Riverside’s distribution of very low income units 25% and low income units 16%.

It is important to note that while the social equity adjustment is meant to prevent the overconcentration of low income units in one area, it does not completely remove the need for affordable housing in the City; therefore, 23% of the City’s RHNA allocation was still assigned to accommodate low income housing units. Thus, the RHNA methodology, and by extension the jurisdiction’s draft RHNA allocation, has already considered this objective to ensure that there is not an overconcentration of lower income households in these currently impacted areas. For this reason, SCAG staff does not recommend a reduction to the jurisdiction’s draft RHNA allocation based on this factor.

FISCAL IMPACT:

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Hemet had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Hemet's Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for the 2020 Regional Transportation Plan/ Sustainable Communities Strategy (2020 RTP/SCS or Connect SoCal) and the 6th cycle of RHNA.² Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.³ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG's preliminary growth forecast information. For the City of Hemet, the anticipated number of households in 2020 was 35,216 and in 2030 was 42,465 (growth of 7,249 households). In February 2018, SCAG staff met with local jurisdiction staff to discuss the

² While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

³ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

Bottom-Up Local Input and Envisioning Process and answer questions. Input from the City of Hemet was not received. The preliminary figures above were used by SCAG.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Hemet submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process. As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmDM.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of Hemet which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁴ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁴ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at: <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Hemet

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Hemet received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Hemet as summarized in the data and calculations in the tables below.

Hemet city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	5980
Percent of households who are renting:	42%
Housing unit loss from demolition (2009-18):	15
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	18,932
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	1.46%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	146,000
Share of region's job accessibility (population weighted):	0.07%
Jurisdiction's HQT population (2045):	-
Share of region's HQT population (2045):	0.00%
Share of population in low/very low-resource tracts:	98.75%

Share of population in very high-resource tracts:	0.05%
Social equity adjustment:	180%

Calculation of Draft RHNA Allocation for Hemet city	
Forecasted household (HH) growth, RHNA period:	5980
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	179
Replacement Need	15
TOTAL PROJECTED NEED:	6174
Existing need due to job accessibility (50%)	277
Existing need due to HQTAs pop. share (50%)	0
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	0
TOTAL EXISTING NEED	277
TOTAL RHNA FOR HEMET CITY	6450
Very-low income (<50% of AMI)	810
Low income (50-80% of AMI)	730
Moderate income (80-120% of AMI)	1171
Above moderate income (>120% of AMI)	3739

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of high-quality transit areas and population forecasts. With no forecasted population living within HQTAs in 2045, the City of Hemet represents zero percent of the SCAG region's HQTA population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on jobs accessibility. From the City of Hemet's median TAZ, it will be possible to reach 1.46% of the region's jobs in 2045 within a 30-minute automobile commute (146,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF HUNTINGTON BEACH

Hearing Dates: January 19 and 25, 2021

The City of Huntington Beach has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD

to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.
- (I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section

8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water

Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the

development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units

for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and

shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section 65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the

region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process,

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City’s Appeal

The City of Huntington Beach submits an appeal and requests an unspecified RHNA reduction of its draft allocation of 13,337 units. The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA methodology for the 6th Cycle RHNA (2021-2029) - incorrect identification of a high-quality transit area (requested reduction of 3,625 units), use of improper year of forecast data (requested reduction 1,861 units).
- 2) Existing or projected jobs-housing balance.*
- 3) Availability of land suitable for urban development or conversion to residential use - impact of sea level rise, coastal inundation, and FEMA-designated flood zones (requested reduction of 2,000 units).
- 4) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans (RTPs).*
- 5) The rate of overcrowding - City’s lower overcrowding rate should be considered in allocating regional housing need (requested reduction of 6,428 units).
- 6) Housing needs generated by the presence of a university campus within any jurisdiction - housing needs generated by colleges or universities in the region in general (requested reduction 360 units).
- 7) The region’s greenhouse gas emissions target – lower income workers are driving alone, longer commutes because housing would not be placed where it is needed and would not be consistent with the SCS.*

* These issues were checked on the appeals form but are discussed together with the arguments related to application of the methodology.

Other: Huntington Beach also argues that the State’s imposition of RHNA allocation requirements on Charter Cities violates the constitution and is in and of itself an illegal act; the City also argues that the residual adjustment is illegal (and requests an associated reduction of 3,442 units); however, this is not a basis for a RHNA appeal. In addition, the City mentions change in circumstances with respect to COVID-19 although this box is not checked on the form.

A. Appeal Board Hearing and Review

The City’s appeal was heard by the RHNA Appeals Board on January 19 and January 25, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an

opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City’s appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City’s bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City’s staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph012521fullagn.pdf?1611371866>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board’s Decision

Based upon SCAG’s adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report and SCAG staff comments prior to the close of the hearing, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as discussed below.

- 1), 2), 4), and 7) SCAG appropriately identified the Beach Boulevard corridor as constituting an HQTAs per its adopted procedures; use of future year HQTAs is not illegal and is a part of SCAG’s adopted Final RHNA Methodology. The Final RHNA Methodology does not substitute 2045 forecasts in lieu of 2030 as Huntington Beach attests; data steps using forecasted growth were all conducted consistent with the Final RHNA Methodology and extensive review opportunities were provided to Huntington Beach of these data elements. The regional greenhouse gas reduction targets are met and the distribution of housing need is consistent with the Sustainable Communities Strategy (SCS).
- 3) SCAG appropriately considered available land constraints related to sea level rise, coastal inundation, and FEMA-designated flood zones; however, Huntington Beach does not

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

demonstrate why its draft RHNA allocation could not be accommodated in any way in the vast majority of the city's land area which is not subject to such constraints.

- 5) The City misinterprets the role of overcrowding in HCD's regional housing needs determination as necessitating inclusion in SCAG's final RHNA allocation methodology. SCAG's Final RHNA Methodology, which was found by HCD to further all necessary statutory objectives, does not and need not include a measure of jurisdiction-level overcrowding; to do so would constitute a change of the methodology which cannot be considered in the appeals process.
- 6) Huntington Beach fails to demonstrate why housing need generated by colleges and universities outside the city disproportionately affects Huntington Beach or in any way would reduce the city's housing need.

Other: The residual need component was applied correctly and is a part of SCAG's adopted final RHNA methodology, which was found by HCD to further all statutory objectives, including those related to Affirmatively Furthering Fair Housing (AFFH). Regarding change in circumstances, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

During the appeals hearing, the City raised a number of issues in its verbal comments that were addressed by staff in more detail during the hearing in response to these comments including (1) charter cities are not subject to the RHNA process; (2) a portion of Beach Boulevard (Route 29) is incorrectly identified as an HQTAs; and (3) the attorney for the Appeals Board cannot serve as an attorney for staff. On January 15, 2021 the City submitted information, which was received as a public comment, from an OCTA agenda and a scope of work for bus restructuring addressing potential changes in bus service as a result of decreased revenue.

Charter Cities are Not Exempt from RHNA

The City asserted that as a charter city, it is exempt from RHNA, i.e., the "State's attempt to impose RHNA allocation upon Charter Cities violates the State Constitution." Housing element law clearly and directly contradicts and refutes this argument. SB 35 which was enacted in September 2017 and

provides a streamlined approval process for affordable housing explicitly sets forth the following legislative intent:

“The Legislature finds and declares that ensuring access to affordable housing is a matter of statewide concern, and not a municipal affair. Therefore, the changes made by this act are **applicable to a charter city**, a charter county, and a charter city and county.” (2017 Cal. Stats. Ch. 366 § 4) [emphasis added].

Furthermore, SB 1333 which was enacted a year later in September 2018 and further amended planning and zoning regulations as applied to charter cities as follows:

“In amending Sections 65356, 65852.150, 65852.25, 65860, 65863, 65863.4, 65863.6, 65863.8, 65866, 65867.5, and 65869.5 of the Government Code to **extend the applicability of those sections to charter cities**, and in amending Section 65700 of the Government Code to extend the applicability of Sections 65300.5, 65301.5, 65359, 65450, 65454, 65455, 65460.8, 65590, and 65590.1 of, and Article 10.6 (commencing with Section 65580) of Chapter 3 of Division 1 of Title 7 of, the Government Code, **to charter cities**, the Legislature hereby finds and declares that it does so to address the lack of affordable housing in the state, which is of vital statewide importance, and that ensuring the location, development, approval, and access to housing for all income levels in all jurisdictions in the state is a matter of statewide concern.” (2018 Cal. Stats. Ch. 856 §1) [emphasis added].

Therefore, based on the foregoing, it is clear, and the RHNA Appeals Board hereby finds and determines, that charter cities are not exempt from the RHNA allocation process.¹²

Identified HQTAs are Consistent with Data Provided by OCTA as Required by the Connect SoCal Data Process

During the hearing, the Appeals Board requested additional information regarding the location of the High Quality Transit Area (HQTA) and/or High Quality Transit Corridor (HQTC) along Beach Boulevard specifically with reference to Bus Routes 29 and 529 and their existing routes. Huntington Beach made the argument that Route 29 doesn't currently (pre-Covid) meet the timing for an HQTC south of Heil Avenue and points out that the 2018 Long Range Transportation Plan (LRTP) Figure 4.1 indicates a reduction recommended for Bus Route 29. In addition, OCTA has indicated that decreases in operating revenue will affect service levels into the future.

¹² During the hearing, the City indicated that it was in litigation with the State challenging the legality of SB 35 as to its application to charter cities. On January 28, 2021, the Los Angeles Superior Court denied the City's petition for writ of mandate (LASC Case No. 30-2019-01044945). On February 1, 2021, the Huntington Beach City Council voted not to appeal this ruling.

SCAG staff explained that the adopted Final RHNA Methodology is based on 2045 HQTAs and HQTCS from the adopted Connect SoCal Plan. As part of developing Connect SoCal, SCAG obtained information from each of the County Transportation Commissions as to the location of HQTAs and HQTCS in their jurisdiction. In Orange County the Orange County Transportation Authority (OCTA) was responsible for providing these data to SCAG. OCTA has consistently indicated to SCAG staff that they plan to run a 10-min frequency route along the corridor down to PCH and this is part of their LRTP and their submittal to SCAG. SCAG staff confirmed with OCTA staff during the Connect SoCal public comment period that they still intend to implement 10-min service on the Beach Boulevard corridor within the RTP planning horizon (i.e., by 2045). OCTA did not provide a route number in their submittal to SCAG. Beach Boulevard was just identified as a future high frequency route as identified in OCTA's Transit Master Plan which fed into their 2018 LRTP. Figure 4.1 of the LRTP represents the short-term Orange County Bus 360 transit network restructuring that OCTA implemented in response to recent ridership trends. This includes schedule adjustments to existing service on Beach Boulevard, but it does not affect the long-range commitment to implement high quality transit along this corridor by 2045. Figure 4.10 presents the long-term transit vision as expressed in the OC Transit Vision Master Plan and the OCTA 2018 LRTP. This includes a vision for high-frequency transit service on Beach Boulevard.

With respect to recent information regarding operating revenue reductions, as noted in the staff report (packet page 9), "...it is understood that planned transit projects are subject to further project-specific evaluation, but that is the nature of the long-range planning process. While there is an inherent chance that transit agencies may change future plans, SCAG's adopted Final RHNA Methodology uses this definition of 2045 HQTAs in order to better align future housing with anticipated future transit and promote the objectives and strategies of SCAG's adopted 2020 Connect SoCal Plan."

SCAG staff verbally made the following points at the hearing:

- Connect SoCal defines high quality transit areas (HQTAs) as "corridor-focused Priority Growth Areas within one half mile of an existing or planned fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes (or less) during peak commuting hours."
- Beach Boulevard, including the portion within the City of Huntington Beach south to PCH, has been identified by OCTA as a planned high frequency corridor since 2018:
 - In their 2018 OC Transit Vision transit master plan for Orange County
 - In their 2018 Long Range Transportation Plan (LRTP) which OCTA submitted to SCAG for inclusion in Connect SoCal

- City of Huntington Beach submitted a comment during the Draft Connect SoCal public review period, questioning the identification of Beach Boulevard in the City limits as an HQTAs. In response, SCAG confirmed that Beach Boulevard is identified by OCTA as a planned high quality transit corridor and therefore the HQTAs designation is appropriate.
- OCTA has not rescinded or amended their OC Transit Vision or their 2018 LRTP, nor have they communicated to SCAG their intention to change the identification of Beach Blvd as a planned high frequency corridor.

The following provides additional background information and a general timeline that was also generally verbally addressed by SCAG at the hearing:

January 2018 – OCTA completes the OC Transit Vision, a transit master plan for Orange County.¹³

- Chapter 5 identifies Beach Boulevard as a priority “Transit Opportunity Corridor” and recommends moving forward with planning, design, and.¹⁴
- Chapter 6 identifies a strategy for improvements to major corridors including Beach Blvd (p. 6-6), first implementing rapid bus (branded as Bravo!) with frequent service at least every 15 minutes, and then converting over time to more robust Bus Rapid Transit (BRT) with service at least every 10 minutes.¹⁵
- Public Engagement for OC Transit Vision includes engagement with elected officials and planning directors across the county.¹⁶ Page B-32 of the Public Engagement Report states:

“Orange County elected officials and planning directors were engaged to provide input on the OC Transit Vision as well as the update to OCTA’s Long-Range Transportation Plan. Like the Citizens Advisory Committee, the feedback from these groups was tied to key milestones and helped to shape the final recommendations. The first meetings were held in May 2017, to present key findings from the State of OC Transit and to introduce the Transit Investment Framework, and in September 2017 to share preliminary recommendations for the Transit Opportunity Corridors and other service enhancements.”

- The OC Transit Vision web page states that “The recommendations from the OC Transit Vision were included in OCTA’s 2019 Long-Range Transportation Plan”.¹⁷

¹⁷ See <https://www.octa.net/Projects-and-Programs/Plans-and-Studies/Transit-Master-Plan/> (second paragraph, last sentence).

November 2018 – OCTA completes its 2018 Long Range Transportation Plan.¹⁸

- The 2018 LRTP identifies a commitment to “Implement OC Transit Vision” (pp. 93-94).
- Figure 4.10 (p. 102) identifies the Beach Blvd corridor as a “2040 High Frequency Corridor”
- LRTP lists “Beach Corridor – High-quality transit between Fullerton Park-and-Ride and Downtown Huntington Beach” (p. 145)
- Attachment D, Public Outreach Report, OCTA explicitly engaged with all 34 Orange County cities including elected officials (pp. 3-4 of Attachment D)
- Of the public comment letters received by OCTA on the 2018 LRTP, none were submitted by City of Huntington Beach.

November 2018 – OCTA submits its project list to SCAG for Connect SoCal, including its 2018 LRTP transit network model input files.

- Submittal includes projects 2160008, OC Transit Vision – Capital, and 2160009, OC Transit Vision – Operations & Maintenance.

November 2019 – SCAG releases Draft Connect SoCal for public review and comment

- Connect SoCal main book Exhibit 3.8 map identifies the Beach corridor as a high quality transit area.
- Transit Technical Report Exhibit 14 map identifies the Beach corridor as a high quality transit corridor.
- Project List Technical Report includes OC Transit Vision projects 2160008 and 2160009, consistent with OCTA’s project submittal.

January 2020 – City of Huntington Beach submits public comments on Connect SoCal¹⁹

- Comment 0001393.02 questions Beach Blvd as a HQTA.
- SCAG responds and confirms that Beach Blvd was identified by OCTA to SCAG as an HQTC which forms the basis for the HQTA.

Attorney for the Appeals Board May Serve in an Advisory/Evaluative Role for Both Appeals Board and Staff

During the hearing, the City asserted that its due process rights were violated because the attorney for the Appeals Board, Patricia Chen, was also “advocating” for staff. Ms. Chen referred to her explanation during the City of Yorba Linda proceeding and indicated that she was not serving as an advocate for any party including staff, appellants, or the Appeals Board, but rather, she has been assisting

¹⁸ See <https://www.octa.net/pdf/OCTALRTP111618FINAL.pdf>.

¹⁹ See https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847 (comment ID# 0001393, p. 92); https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-3b.pdf?1606001925 (Huntington Beach Comment Letter, p. 3).

the Appeals Board and staff understand the statutory framework of the RHNA process and advising as to SCAG's duties and responsibilities under the statute.

In the California Supreme Court decision, *Today's Fresh Start, Inc. v. Los Angeles County Office of Education*, 57 Cal.4th 197 (2013), an attorney served as both general counsel for the County Office of Education and its governing board. At issue was a legal challenge brought by a charter school seeking to overturn the County Board's decision to revoke its charter on the grounds that the County Office and County Board had an unconstitutional overlapping adversarial and advisory functions in part because the same attorney served as general counsel for both the County Office and the County Board. The court found no impropriety on the part of the attorney serving in both roles:

"Today's Fresh Start repeatedly characterizes her as a prosecutor, but this misstates both the nature of the proceedings and [the attorney's] role. The County Board was charged with considering and weighing the fruits of the staff investigation and what it showed in favor of and against revocation, as well as the argument and evidence of Today's Fresh Start. Statutorily, the County Office and County Board had no agenda, no stake in one outcome or the other. Thus, like many administrative proceedings the United States Supreme Court and we have previously approved, this was not a classic adversarial hearing, with a prosecutor and a defendant. There was no prosecutor here. [The attorney] presented no evidence, examined no witnesses, and made no argument in favor of revocation. Instead, [the attorney's] role was to advise the County Board on its duties in deciding whether to direct charter revocation, just as she had previously advised County Office staff as to their powers and responsibilities when conducting an investigation of Today's Fresh Start. In neither capacity was she charged with being an advocate or an adjudicator." (Id. at 223).

Similar to the facts underlying the decision in *Today's Fresh Start*, the RHNA appeals are not the type of "classic adversarial hearing with a prosecutor and defendant" which case law has held, in other contexts, requires a separation of functions between counsel prosecuting a matter and counsel advising a neutral decisionmaking body (i.e., with a prosecutor and defendant). In the present appeal (and all other appeals heard by the RHNA Appeals Board) the nature of the appeal (allocation of RHNA units based on statute and approved methodology) is not adversarial or prosecutorial, and, further, Ms. Chen did not present evidence, examine witness, or make specific arguments in favor of an outcome. While due process may be required to separate the function of "adversarial" or "prosecutorial" advocates from attorneys advising decisionmakers, separation of functions is not required when an attorney serves in an evaluative or advisory role in a non-adversarial or prosecutorial hearing, and (in that case) the same attorney may serve as advisor to both staff and the decisionmaker. The record demonstrates and the

RHNA Appeals Board specifically finds the facts demonstrate that Ms. Chen served in an evaluative and advisory role during the RHNA appeals process. As such, no due process violation occurred based on these facts.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal of the Draft Allocation for the City of Huntington Beach

RECOMMENDATION:

Deny the appeal filed by the City of Huntington Beach to reduce the draft RHNA allocation for the City of Huntington Beach.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City's draft RHNA allocation is 13,337 units. The City does not specify a requested reduction, its appeal is organized around several issues, some of which do specify a reduction, the total of which is in excess of the City's draft RHNA allocation. The City of Huntington Beach requests a reduction of its RHNA allocation based on the following seven issues:

- 1) Application of the adopted Final RHNA methodology for the 6th Cycle RHNA (2021-2029) - incorrect identification of a high-quality transit area (requested reduction of 3,625 units), use of improper year of forecast data (requested reduction 1,861 units).
- 2) Existing or projected jobs-housing balance.*
- 3) Availability of land suitable for urban development or conversion to residential use - impact of sea level rise, coastal inundation, and FEMA-designated flood zones (requested reduction of 2,000 units).
- 4) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans (RTPs).*
- 5) The rate of overcrowding - City's lower overcrowding rate should be considered in allocating regional housing need (requested reduction of 6,428 units).
- 6) Housing needs generated by the presence of a university campus within any jurisdiction - housing needs generated by colleges or universities in the region in general (requested reduction 360 units).

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Huntington Beach (Final Determination of Appeals Decisions)

- 7) The region's greenhouse gas emissions target – lower income workers are driving alone, longer commutes because housing would not be placed where it is needed and would not be consistent with the SCS.*

* These issues are checked on the appeals form but are discussed together with the arguments related to application of the methodology.

Other: Huntington Beach also argues that the State's imposition of RHNA allocation requirements on Charter Cities violates the constitution and is in and of itself an illegal act; the City also argues that the residual adjustment is illegal (and requests an associated reduction of 3,442 units); however, this is not a basis for a RHNA appeal. In addition, the City mentions change in circumstances with respect to COVID-19 although this box is not checked on the form.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Huntington Beach's RHNA allocation. Following Huntington Beach's appeal issues:

Issues 1, 2, 4 and 7, SCAG appropriately identified the Beach Boulevard corridor as constituting an HQTAs per its adopted procedures; use of future year HQTAs is not illegal and is a part of SCAG's adopted Final RHNA Methodology. The Final RHNA Methodology does not substitute 2045 forecasts in lieu of 2030 as Huntington Beach attests; data steps using forecasted growth were all conducted consistent with the Final RHNA Methodology and extensive review opportunities were provided to Huntington Beach of these data elements. The regional greenhouse gas reduction targets are met and the distribution of housing need is consistent with the Sustainable Communities Strategy (SCS).

Issue 3, SCAG appropriately considered available land constraints related to sea level rise, coastal inundation, and FEMA-designated flood zones; however, Huntington Beach does not demonstrate why its draft RHNA allocation could not be accommodated in any way in the vast majority of the city's land area which is not subject to such constraints.

Issue 5, the City misinterprets the role of overcrowding in HCD's regional housing needs determination as necessitating inclusion in SCAG's final RHNA allocation methodology. SCAG's Final RHNA Methodology, which was found by HCD to further all necessary statutory objectives, does not and need not include a measure of jurisdiction-level overcrowding; to do so would constitute a change of the methodology which cannot be considered in the appeals process.

Issue 6, Huntington Beach fails to demonstrate why housing need generated by colleges and universities outside the city disproportionately affects Huntington Beach or in any way would reduce the city's housing need.

Other: The residual need component was applied correctly and is a part of SCAG's adopted final RHNA methodology, which was found by HCD to further all statutory objectives, including those related to Affirmatively Furthering Fair Housing (AFFH).

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Huntington Beach: 13,337 units
Very Low Income: 3,652 units
Low Income: 2,179 units
Moderate Income: 2,303 units
Above Moderate Income: 5,203 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Huntington Beach. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issues 1, 2, 4, 7: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code section 65584.05 (b)(2)]; existing or projected jobs-housing balance [Government Code section 65584.04(e)(1)]; distribution of household growth assumed for purposes of comparable Regional Transportation Plans [Government Code section 65584.04(e)(3)]; and the region's greenhouse gas emissions targets [Government Code section 65584.04(e)(12)].

The City of Huntington Beach contends that the portion of the Beach Boulevard corridor within the City should not be considered an HQT. The City contends that Orange County Transportation Authority (OCTA) Route 29 does not meet the threshold of 15 minutes' peak service frequency which is necessary for inclusion as an HQT. The City also contends that since statute does not specify what a future year HQT/HQT may be that the definition is illegal and cannot be used in calculation of RHNA.

Huntington Beach contends that SCAG incorrectly projected household growth and employment, introducing growth projections for the year 2045 despite the fact that the RHNA projection period extends only through 2029. Huntington Beach contends that the basis for the entire methodology is fundamentally flawed. The City further contends that SCAG should use 2030 employable population as a factor in allocating housing need.

The City indicates that lower income workers are driving alone, and that longer commutes would occur as a result of housing not being placed where it is needed and allocation of housing to the City would not be consistent with the SCS and this would increase greenhouse gas emissions.

In addition to the above bases for appeal, the City includes identifies the following planning factor:

- *Opportunities to maximize the use of public transportation and existing transportation infrastructure (not an appeal basis).*

SCAG Staff Response: The arguments raised by the City of Huntington Beach in its appeal amount to a challenge to the Final RHNA Methodology, which, as described in Attachment 1, was adopted by the Regional Council on March 5, 2020 after an extensive public development and review process. The issues outlined in the appeal, such as the calculation and distribution of projected and existing need, the use of a 2045 horizon year, and the calculation of job accessibility are arguments against the adopted Final RHNA Methodology itself, and not how the methodology was applied to the City. Development of the Final RHNA Methodology is a separate process from the RHNA appeals process, and it is outside the scope of the appeals process for the Appeals Board to change the adopted methodology. No arguments or supporting evidence is provided in the appeal that indicates that the methodology to determine the City's share of regional housing need was improperly applied.

The statute vests in HCD the authority to assess whether a RHNA methodology furthers statutory objectives¹ [Government Code section 65584.04(i)], and per the attached letter dated January 13, 2020, HCD has found that SCAG's 6th cycle RHNA methodology furthers all of RHNA's statutory objectives. As such, the methodology is not, as Huntington Beach claims, fundamentally flawed.

HQTA Location, Population and Transit Access

The adopted final RHNA methodology includes a component that calculates need based on a jurisdiction's population within an HQTA in 2045 in Connect SoCal, SCAG's 2045 RTP/SCS. For planning and SCS purposes, SCAG identifies a "high quality transit area" as generally a walkable transit village or corridor that is within one-half mile of a major transit stop or High-Quality Transit Corridor (HQTC) as defined in Government Code 21155(b) and 21064.3 excluding freeway transit corridors with no bus stops on the freeway alignment. SCAG's technical methodology for identifying HQTCs and major transit stops is based on input from the Regional Transit Technical Advisory Committee (RTTAC), as well as consultation with local agencies, other large MPOs in California, and the Governor's Office of Planning and Research.

SCAG's definition of high-quality transit corridors is found in Appendix A of Connect SoCal's Transit Technical Report (attached) and indicates that:

Planned HQTCs and major transit stops are future improvements that are expected to be implemented by transit agencies by the RTP/SCS horizon year of 2045. These are assumed by definition to meet the statutory requirements of an HQTC or major transit stop. SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years.

However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG and as such it is understood that planned transit projects are subject to further project-specific evaluation, but that is the nature of the long-range planning process. While there is an inherent chance that transit agencies may change future plans, SCAG's

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)

adopted final RHNA methodology uses this definition of 2045 HQTAs in order to better align future housing with anticipated future transit and promote the objectives and strategies of SCAG's adopted 2020 Connect SoCal Plan.

Huntington Beach correctly notes that there is not a specific statutory definition for future year HQTAs or HQTAs. SCAG's adopted RHNA methodology, which uses future year HQTAs as defined above and several other inputs, was reviewed by HCD on January 13, 2020 pursuant to their review authority in Government Code 65584.04(i) and found to further the statutory objectives of RHNA (attached). As a part of the RHNA methodology, the use of future year HQTAs contributed to this finding, specifically relating to RHNA objective #2 related to infill, environmental, and development efficiency.

The attached map shows the 2045 HQTA boundaries for the City of Huntington Beach which were used in Connect SoCal. SCAG worked closely with OCTA to identify the HQTAs in Orange County which form the basis for HQTAs. SCAG and OCTA together identified the Beach Blvd. corridor, including the entire alignment within the City of Huntington Beach, as both an existing and future HQTC. See figure 4.10 in OCTA's 2018 LRTP (attached). The nature of bus services is that routes and service frequency can change periodically, thus a CTC's estimate of future transit service frequency is the best estimate available at a given point in time—in this instance, the point in time required to complete Connect SoCal.

Specifically, OCTA provided data for inclusion in Connect SoCal which indicated a 10-minute AM and PM peak headway for Rapid Route 529 on the Beach Blvd Corridor and is identified in the Connect SoCal Project List as RTP ID 2160008. Thus, it is qualified as an HQTA for Connect SoCal and by extension, the adopted RHNA methodology.

In addition to the arguments related to the inclusion of this specific transit corridor, Huntington Beach also contends that OCTA is experiencing ridership and revenue declines during the COVID-19 pandemic; however, the City has not provided evidence of a specific change in future service which might impact whether the Beach Blvd corridor is designated as an HQTA. The City also suggests that the pandemic is currently impacting public transportation more generally; however, evidence is not provided to indicate that this is a sufficiently lasting trend through the end of the RHNA planning period (2029) and/or the Connect SoCal horizon year (2045).

The Wendell Cox report submitted as an attachment to this appeal also brings up several other issues in the context of HQTAs, including that access to jobs by transit “tends to be considerably less than by driving alone.” Recognizing that transit service is uneven across the region, the adopted RHNA methodology also allocates a substantial amount of housing need on the basis of automobile-based job accessibility. The report also contends that transit share is declining amongst low-income

workers; however, the policy objective of RHNA is to promote a better jobs-housing balance and this is accomplished by assigning housing to areas with future HQTAs, including Huntington Beach.

Greenhouse Gas Emissions and SCS Consistency

The City argues that the allocation is not consistent with the SCS and workers would be driving further which would increase greenhouse gas emissions. SCAG allocates both “projected need” and “existing need” in a manner that is consistent with the development pattern in the 2020-2045 Regional Transportation Plan/Sustainable Communities Strategy (Connect SoCal), which includes a GHG emission reduction target for the region. The 6th cycle RHNA does not change the population growth forecast from Connect SoCal for 2029 (end of RHNA period) or any other year including 2035 for which Connect SoCal is required to meet the greenhouse gas emissions target. The Connect SoCal Forecasted Regional Development Pattern is shown on Exhibit 1 of the Sustainable Communities Strategy Technical Report, p. 13. Specifically, the development pattern includes priority growth areas, incorporated areas, job centers, entitled projects and sphere of influence which together would accommodate 95% of the growth till 2045. The development pattern reflects the strategies and policies contained in Connect SoCal.

While RHNA would also require the City to address existing need, those units are intended to serve the existing population and were allocated based on transit and job access measures derived from Connect SoCal data. Therefore, the RHNA methodology for “existing need” also promotes an efficient development pattern in utilizing public transit, reducing commute distance and contribute to further reduce per capita greenhouse gas emissions. Accordingly, the total allocation for regional housing need (“existing need” and “projected need”) is aligned with the strategies and policies underlying the development pattern in the Connect SoCal, and the RHNA allocation methodology is consistent with meeting the region’s GHG emissions target.

Conclusion

An appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself. Notwithstanding the City’s arguments, SCAG properly determined the allocation of housing need on the basis of future transit accessibility, HQTA considerations, and other factors pursuant to the adopted RHNA methodology which cannot be altered through the RHNA appeals process. Since the RHNA methodology was applied properly to Huntington Beach and the methodology was found by HCD to further RHNA’s statutory objectives including objective 3) related to jobs-housing balance, SCAG staff do not recommend a decrease to Huntington Beach’s draft RHNA allocation.

Issue 3: Availability of land suitable for urban development or for conversion to residential use [Government Code section 65584.04(e)(2)(B)].

Huntington Beach asserts that SCAG failed to consider the impact of sea level rise, planning for coastal inundation, and FEMA designated flood zones when allocating RHNA to Huntington Beach. Huntington Beach is not appealing on the basis of lands protected from urban development under existing federal or state programs [Section 65584.04(e)(3)].

Huntington Beach cites California Coastal Commission (CCC) documents indicating their role in planning and development approvals, and asserts that the CCC was not sufficiently engaged during the development of SCAG's RHNA methodology. Huntington Beach states that CCC guidelines recommend residential land to be rezoned to open space in order to accommodate managed retreat of areas subject to sea level rise, and that the RHNA methodology failed to include these and related analyses.

SCAG's Data/Map Books include an exhibit depicting 2 foot sea level rise areas; however, the City argues that a 3.5 foot sea level rise analysis would be more appropriate, and that sea level rise data are not used in Connect SoCal or RHNA calculations. The City also attests that data covering potential infill parcels contained in the Data/Map Book are inaccurate.

Huntington Beach argues that coastal cities are explicitly unable to accommodate any development, especially residential development, in sea level rise areas, and that these areas should be fully excluded from all aspects of the RHNA calculation.

SCAG Staff Response: Once again, a challenge to the RHNA methodology is not a basis for appeal. Moreover, it is presumed that planning factors such as lands protected by federal and state programs have already been accounted for prior to the local input submitted to SCAG since such factors are required to be considered at the local level. Attachment 1 describes SCAG's extensive Bottom-Up Local Input and Envisioning Process which provided extensive engagement and review opportunities to ensure that forecasting growth in constrained areas was avoided. An updated version of the draft data/map book originally provided to and discussed with Huntington Beach in March 2018 is available at <https://scag.ca.gov/sites/main/files/file-attachments/huntingtonbeach.pdf> and specifically includes data on coastal inundation/sea level rise, protected natural lands, and flood hazard zones.

As such, Huntington Beach's forecasted growth – recorded as 517 households during the 2020-2030 period and used as an input to the RHNA methodology – would have reflected the development constraints referenced in the City's appeal. No evidence was submitted that these areas have changed since the most current input provided in August 2018. However, locally-reviewed growth forecasts are not the only part of the RHNA methodology—additional units are assigned on the basis of job and transit accessibility in particular. There is no requirement for each part of the RHNA methodology to consider each local planning factor.

These data/map books also included a draft map which used a rudimentary, region-wide approach to highlight potential infill or refill opportunities based on largely on property value. These were included for research purposes and were not used for growth forecasting or RHNA allocation purposes.

Per Government Code 65584.04(e)(2)(B), “the determination of land available suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.” While SCAG staff does not dispute that there may be areas at risk of flooding in the jurisdiction, the jurisdiction has not provided evidence that an agency or organization such as FEMA has determined that flood management infrastructure is inadequate to avoid flood risk in these areas. Additionally, the jurisdiction has not provided evidence that it cannot plan for its assigned draft RHNA allocation in other areas of the jurisdiction that are not at risk for floods specifically.

While Huntington Beach explains why it cannot accommodate growth in these areas, the City fails to explain if or why the 94.5% of the city’s land area which are not in the coastal zone or the 92.5% of the city’s land area which is not in a FEMA-designated flood zone cannot accommodate the additional housing units called for in its draft RHNA allocation. The presence of protected open space alone does not reduce housing need, nor does it preclude a jurisdiction from accommodating its housing need elsewhere. Specifically, Government Code Section 65584.04(e)(2)(B) indicates that:

“...The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential development under alternative zoning ordinances and land use restrictions...”

In response to similar arguments made by the cities of Coronado and Solana Beach in their RHNA allocation appeals earlier this year,

“Coastal Commission Executive Director Jack Ainsworth said that while there are some constraints in the coastal zone related to increases in housing density around areas vulnerable to sea level rise and erosion, that doesn’t mean that there are not areas within the coastal zone where significant increases in housing density are possible. ‘To make a blanket statement that the Coastal Commission would not approve increases in housing density is simply not accurate,’ he wrote. “Over the past year or so, the Commission has demonstrated our commitment to increasing

housing density through individual permitting actions and our local coastal program planning efforts with local governments.’²

The California Coastal Act encourages the protection of housing opportunities for individuals of low and moderate incomes (Public Resources Code section 30604). Furthermore, the Coastal Act does not allow residential densities to be reduced (including projects making use of density bonuses) unless the density cannot feasibly be accommodated in conformity with the Local Coastal Program (Public Resources Code section 30604(f)). The Coastal Act also encourages the minimization of vehicle miles traveled (Public Resources Code section 30253(e)). In addition, in April 2020, the Coastal Commission recently issued new guidance on the “Implementation of New ADU [accessory dwelling units] Laws”.³

As such, the City can and must consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, alternative zoning and density, and accessory dwelling units. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s draft RHNA allocation. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction’s RHNA allocation based on this factor.

Issue 5: Rate of overcrowding [Government Code section 65584.04(e)(7)].

Huntington Beach contends that because the city’s overcrowding rate (relative to the national rate) is less than that of the SCAG region it should receive a proportionately lower housing need allocation.

The City notes that approximately 34% of HCD’s determination of housing need for the SCAG region was based on a regional overcrowding adjustment (459,917 units out of the regional total of 1,341,827 units). The origin of this adjustment is that overcrowding in SCAG region is 6.76% higher

² *San Diego County cities push back on state-mandated housing goals*, San Diego Union Tribune, January 14, 2020 (<https://www.sandiegouniontribune.com/business/growth-development/story/2020-01-14/sandag-housing>).

³ Memo from John Ainsworth to Planning Directors of Coastal Cities and Counties dated April 21, 2020 re: Implementation of New ADU Laws (<https://documents.coastal.ca.gov/assets/rflg/California%20Coastal%20Commission%20ADU%20Memo%20dated%20042120.pdf>).

than the national average. Since Huntington Beach's overcrowding rate is only 0.31% higher than the national average, the City contends that its RHNA allocation should reflect this difference and be reduced by 6,428 units.

SCAG Staff Response: Government Code section 65584.01 *et seq.* allows HCD to use the region's level of household overcrowding as a factor in determining regional housing need. HCD elected to use this measure and determined that the region's level of overcrowding merited an adjustment to the region's housing needs based on extent to which the region's overcrowding rate exceeds the rate of the nation. This results in an adjustment of 459,917 units (comprising 34.2% of the total regional housing needs determination of 1,341,827 units). Both the statute and HCD's interpretation thereof frame overcrowding as an issue relevant to the regional housing market and not one limited by jurisdictional boundaries. In other words, overcrowding is a regional issue relevant to jurisdictions with both high and low levels of overcrowding themselves. There is no requirement that SCAG allocate housing units on the same basis HCD assigned housing need to the SCAG region (i.e. allocate to jurisdictions on the basis of their individual overcrowding rates). SCAG's adopted RHNA methodology relies on other factors to distribute housing need – namely job and transit accessibility – which more effectively furthers RHNA's statutory objectives, particularly with respect to increasing the mix of housing types, promoting socioeconomic equity, improving the interregional jobs-housing balance, and affirmatively furthering fair housing (AFFH).

Furthermore, the City mistakenly characterizes its RHNA allocation as being based on a "SCAG overcrowding adjustment" when there is no such adjustment in RHNA methodology. The City then proposes a different RHNA methodology; however, an alternative methodology cannot be considered by the appeals board and is not a basis for appeal. As such, SCAG staff does not recommend a revision to Huntington Beach's RHNA allocation on this basis.

Issue 4: Housing needs generated by the presence of a university campus within a member jurisdiction [Government Code section 65584.04(e)(9)].

Huntington Beach argues that the final RHNA methodology does not address the housing needs generated by universities across the region, specifically the needs for off-campus housing, referencing an Executive Summary to the adopted final RHNA methodology. The City alleges illegal political manipulation of the RHNA process with regards to discussions of university housing needs amongst Regional Council members since university housing needs were not discussed at the November 7th Regional Council meeting.

The City cites UCLA and Cal State system student housing documents which indicate housing shortfalls, overcrowding, and homelessness amongst students, and contends that SCAG failed to account for these needs in the development of the RHNA methodology.

The City furnishes a consultant study assessing the regional demand for off-campus housing generated by 13 universities in the SCAG region, citing a total need for housing 27,826 students by 2030. The City suggests that Huntington Beach's total RHNA should be reduced by 360 units based on the ratio of this demonstrated housing need to the regional housing needs determination of 1,341,827 units (alternately listed as 2.7% in the City's appeal letter and 2.07% in the consultant study).

SCAG Staff Response: While the RHNA methodology does not contain an executive summary, it appears as though the City is referring to discussion on page 24 of SCAG's adopted RHNA methodology relating to this local planning factor. This discussion concludes that region-wide, most university housing needs are addressed and met by the institution both on- and off-campus, but a small number of jurisdictions indicated that off-campus student housing is an important issue and that this may be best addressed in individual housing elements. As such, no distinct, additional factor or adjustment was included in SCAG's adopted RHNA methodology related to university housing needs.

RHNA is concerned with the region's and local jurisdictions' population within households and excludes population within group quarters as defined by the US Census Bureau, of which college dormitories are a part. Students living either with family or in other household types (e.g. with roommates) in non-group quarters housing would be included as part of a forecast of regional or local household population⁴ and thus would be reflected in the projected need component of the RHNA methodology.

Huntington Beach's local planning factor survey, which would have contributed to the regional assessment of this local planning factor which is referenced, was returned to SCAG (attached) but the City indicated that it was not impacted by university-generated housing needs.

The appeal proposes that this planning factor be applied in a different manner than what was adopted in the Final RHNA Methodology. Again, the City is proposing an alternative RHNA methodology which is outside the scope of the RHNA appeals process and cannot be considered by the Appeals Board. In addition, Huntington Beach fails to establish why the City is disproportionately affected in any way by housing need generated by colleges or universities. Notably, the City does not assert any housing needs generated by universities or campuses which are in Huntington Beach—the analysis provides a *regional* analysis of off-campus housing demand at 13 universities outside of Huntington Beach. Whether, and the extent to which, students at universities elsewhere may choose to live in Huntington Beach more than in other local

⁴ Details for how the Connect SoCal forecast treats group quarters population can be found in the Demographics & Growth Forecast Technical Report at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf

jurisdictions, is not explored in the City's analysis. As such, SCAG staff does not recommend a reduction on this basis.

Other: Legality of RHNA allocation and residual allocation; change in circumstances – COVID-19.

The City argues that the State's imposition of RHNA allocation requirements on Charter Cities violates the constitution and is in and of itself an illegal act. Huntington Beach also asserts that the residual reallocation portion of the RHNA methodology is illegal, capricious, is to the detriment of other statutory objectives, and prevents Huntington Beach from promoting socioeconomic equity. The City argues that the cap applied to lower-resourced jurisdictions is arbitrary that Santa Ana's RHNA allocation in particular should be higher as this cap is based on self-reported growth.

The City also argues that COVID-19 has resulted in a change in circumstances that have resulted in a strain on the ability of transit agencies to provide service resulting in a change in transit patterns.

SCAG Staff Response: As noted above in response to Issues 1, 2, 4 and 7, the adopted RHNA methodology is not grounds for an appeal, only its application may be appealed. SCAG's RHNA allocation process is fully consistent with State law.

The RHNA methodology is a complex balance of several regional objectives ranging from job-housing balance to Affirmatively Furthering Fair Housing (AFFH). Ultimately, AFFH is one of the RHNA objectives described in Government Code 65584(d) and the residual reallocation is part of the adopted final RHNA methodology. It furthers the AFFH objectives by ensuring that RHNA allocations are not concentrated in jurisdictions with lower opportunity scores, reallocating them to jurisdictions with higher opportunity scores (such as Huntington Beach). Huntington Beach asserts that this reallocation is to the detriment of job and transit access because DAC jurisdictions may not receive allocation on those bases, compromising these statutory objectives.

It is unclear from Huntington Beach's appeal how socioeconomic equity is undermined through this component of the RHNA allocation methodology, specifically given HCD's finding to the contrary. Per their January 13, 2020 letter (attached), HCD provided the finding that SCAG's RHNA methodology furthered all five objectives of State housing law, including the inclusion of the methodology's residual factor's connection to affirmatively furthering fair housing. As discussed in the response to Issue 5, assigning units to jurisdictions based on their own overcrowding rate, which was not part of a methodology found to further socioeconomic equity or other RHNA objectives, is not required and its consideration at this time would constitute a change to the methodology itself which is not possible through an appeal.

SCAG staff does not recommend a reduction to Huntington Beach's draft RHNA allocation based on this issue.

See response to Issues 1, 2, 4 and 7 above regarding HQTAs and changes in transit service as a result of COVID-19. SCAG recognizes that COVID-19 presents unforeseen circumstances. However, Section 65584.05(b) requires that:

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

As noted above, the City has not provided evidence to indicate that change in transit service related to COVID-19 is a sufficiently lasting trend that will extend through the end of the RHNA planning period (2029) and/or the Connect SoCal horizon year (2045).

SCAG’s Regional Council delayed the adoption of its 2020-2045 RTP/SCS by 120 days in order to assess the extent to which long-range forecasts of population, households, and employment may be impacted by COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report⁵ outlines the process for forecasting long-range employment growth which involves understanding national growth trends and regional competitiveness, i.e., the SCAG’s region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region’s long-term competitiveness or the region’s employment outlook for 2023-2045. As such, SCAG’s assessment is that comparable data would not suggest long-range regional employment declines.

The COVID-19 pandemic has had various impacts throughout Southern California; however, it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in the appeal that indicates that housing need within Huntington Beach is disproportionately impacted in comparison to the rest of the SCAG region. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction’s draft RHNA allocation.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Huntington Beach had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Huntington Beach's Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁶ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁷ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Huntington Beach, the anticipated number of households in 2020 was 79,048 and in 2030 was 79,565 (growth of 517 households). In March 2018, SCAG staff and CDR

⁶ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁷ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

staff met with staff from the City of Huntington Beach to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Huntington Beach submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Huntington Beach and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁸ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTAs) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

⁸ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

3. Draft RHNA Allocation for the City of Huntington Beach

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Huntington Beach received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Huntington Beach as summarized in the data and calculations in the tables below.

Huntington Beach city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	427
Percent of households who are renting:	42%
Housing unit loss from demolition (2009-18):	2
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	1,309
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	17.56%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,765,000
Share of region's job accessibility (population weighted):	1.32%
Jurisdiction's HQT population (2045):	74,765
Share of region's HQT population (2045):	0.73%
Share of population in low/very low-resource tracts:	7.76%
Share of population in very high-resource tracts:	37.53%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Huntington Beach city	
Forecasted household (HH) growth, RHNA period:	427
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	13
Replacement Need	2
TOTAL PROJECTED NEED:	441
Existing need due to job accessibility (50%)	5534
Existing need due to HQTAs pop. share (50%)	3059
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	4304
TOTAL EXISTING NEED	12896
TOTAL RHNA FOR HUNTINGTON BEACH CITY	13337
Very-low income (<50% of AMI)	3652
Low income (50-80% of AMI)	2179
Moderate income (80-120% of AMI)	2303
Above moderate income (>120% of AMI)	5203

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 74,765 living within HQTAs, the City of Huntington Beach represents 0.73% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Huntington Beach’s median TAZ, it will be possible to 17.56% of the region’s jobs in 2045 within a 30-minute automobile commute (1,765,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 4,304 units assigned to the City of Huntington Beach.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF HUNTINGTON PARK

Hearing Date: January 8, 2021

The City of Huntington Park has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁴ See https://scag.ca.gov/sites/main/files/file-attachments/6thcyclerrhna_scagdetermination_08222019.pdf?1602190292

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Huntington Park submits an appeal and requests a RHNA reduction of 1,000 units (of its draft allocation of 1,601 units). The grounds for appeal are as follows:

1. Availability of land suitable for urban development or for conversion to residential use - the City is already fully developed with limited land use, ranking 17th in the nation for highest density.
2. High housing cost burdens - increasing land value is affecting the City's affordability.
3. The rate of overcrowding - high density and overcrowding already results in insufficient parking and open space for its residents.
4. Sewer or water infrastructure constraints for additional development* - aging infrastructure is a constraint.

*While the City did not include this factor in the Appeal Request Form, the City indirectly raises the issue.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 8, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010821fullagn.pdf?1609455450>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

B. [Appeals Board's Decision](#)

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

1. Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
2. Regarding high housing cost burdens, cost-burdened households are those who pay at least 30 percent of their household income on housing costs, and the regional determination already accounts for this issue.
3. Regarding overcrowding, the regional determination addresses this issue. Overcrowding is defined as more than 1.01 persons per room in a housing unit - a jurisdiction can increase its density without resulting in overcrowded housing units.
4. Regarding sewer or water infrastructure constraints, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction in the RHNA allocation.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeal Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 8, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Huntington Park

RECOMMENDED ACTION:

Deny the appeal filed by the City of Huntington Park (City) to reduce the Draft RHNA Allocation for the City by 1,000 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of Huntington Park requests a reduction of its RHNA allocation by 1,000 units (from 1,601 units to 601 units) based on the following issues:

1. Availability of land suitable for urban development or for conversion to residential use - the City is already fully developed with limited land use, ranking 17th in the nation for highest density.
2. High housing cost burdens - increasing land value is affecting the City's affordability.
3. The rate of overcrowding - high density and overcrowding already results in insufficient parking and open space for its residents.
4. Sewer or water infrastructure constraints for additional development* - aging infrastructure is a constraint.

*While the City did not include this factor in the Appeal Request Form, the City indirectly raises the issue.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of Huntington Park's RHNA allocation. Issue 1 was not demonstrated to be an impediment to meeting Huntington Park's RHNA

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Huntington Park (Final Determination of Appeals Decisions)

allocation since it does not consider the possibility of alternate zoning and additional opportunities such as accessory dwelling units. SCAG's final RHNA methodology already accounts for the issues raised in Issues 2 and 3. Based on Issue 4, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction in the RHNA allocation.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received Draft RHNA Allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Huntington Park: 1,601 units

- Very Low Income: 263 units
- Low Income: 196 units
- Moderate Income: 242 units
- Above Moderate Income: 900 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Huntington Park. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City argues that as a city with only 3 square miles, it has limited land use available and is already fully developed, ranking 17th in the nation for highest density.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to allocate RHNA need. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

Issue 2: High housing cost burdens [Government Code Section 65584.04(e)(6)].

The City argues increasing land value is affecting the City’s affordability.

SCAG Staff Response: A RHNA allocation is a representation of a jurisdiction's existing and projected housing need. Cost-burdened households, or those who pay at least 30 percent of their household income on housing costs, is a prevalent problem throughout the region. Cost-burdened households are seen in both high- and low-income communities, suggesting that in most of the SCAG region high housing costs are a consistent problem for all income levels, and is a regional indicator of existing housing need. Meanwhile, a jurisdiction's assigned RHNA allocation is intended to address a share of regional housing need. Though RHNA methodology calculates jurisdictional existing need through the factors of job access and transit access, the regional existing need generated by housing crisis indicators are addressed.

While household cost burden is a regional problem, it is impossible to determine how and why the cost-burden is occurring in a particular jurisdiction. Cost-burden is a symptom of housing need and not its cause. A jurisdiction might permit a high number of units but still experience cost-burden because other jurisdictions restrict residential permitting. Or a jurisdiction might have a large number of owner-occupied housing units that command premium pricing, causing cost-burden for high income households and especially on lower income households due to high rents from high land costs. Because cost-burden is already addressed as a regional existing need and, at a jurisdictional level may not be a cause of existing need, SCAG staff does not recommend a change to the jurisdiction's draft RHNA allocation based on this factor.

Issue 3: *The rate of overcrowding [Government Code Section 65584.04(e)(7)].*

The City argues that high density and overcrowding has resulted in insufficient parking and open space for its residents already. Adding more residential units would exacerbate this problem.

SCAG Staff Response: Government Code Section 65584.04(e)(2)(B) encourages the consideration of available land beyond vacant land, including underutilized land, opportunities for infill development, and increased residential densities. It should be noted that increased density is not a synonym for overcrowding. Overcrowding is defined as more than 1.01 persons per room in a housing unit and a jurisdiction can increase its density without resulting in overcrowded housing units. One of the objectives of increasing housing supply is to reduce overcrowding and ironically, planning for fewer housing units than needed may in fact result in overcrowding.

While SCAG understands it is a challenge for jurisdictions to provide the appropriate infrastructure, parking, open space, and other public services, that does not preclude the jurisdiction from planning and zoning for the existing and projected housing need and cannot be considered as a basis for appeal.

As part of the regional determination, HCD applied an overcrowding component. Similar to cost-burden, overcrowding is caused by an accumulated housing supply deficit and is considered an

indicator of regional existing housing need. Because overcrowding is already addressed as a regional existing need, and infrastructure challenges do not preclude planning and zoning for housing need, SCAG staff does not recommend a change to the jurisdiction's draft RHNA allocation based on this factor.

However, SCAG recognizes many jurisdictions with especially high job and transit accessibility are lower-income and lower-resourced. As described in Attachment 1, the RHNA methodology applies a maximum to disadvantaged communities (DACs) equal to the 2045 household growth forecast. As a DAC, the City of Huntington Park received a reduction of 3,364 units, such that the City's total RHNA housing unit need does not exceed its 2020-2045 forecasted growth of 1,601 households. Please see Attachment 1, "Local Input and Development of Draft RHNA Allocation" which describes the extent of local engagement and review opportunities provided to local jurisdictions on the growth forecast. Review opportunities began in October 2017. While the initial deadline for input was October 2018, additional review opportunities were provided to all local jurisdictions through June 2020.

Issue 4: Sewer or water infrastructure constraints for additional development [Government Code Section 65584.04(e)(2)(A)]

The City points to its aging infrastructure as a constraint.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water constraints mentioned by the jurisdiction, it is not evident that the respective water provider has rendered a decision that would prevent the jurisdiction from providing necessary infrastructure. In addition, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA Allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not required to develop the assigned units. For these reasons, SCAG staff does not recommend a housing need reduction based upon this planning factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

ATTACHMENT(S):

1. Local Input and Development of Draft RHNA Allocation (City of Huntington Park)
2. Appeal Form and Supporting Documentation (City of Huntington Park)
3. Comments Received During the Comment Period (General)

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Huntington Park had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Huntington Park's Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.¹ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.² While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG's preliminary growth forecast information. For the City of Huntington Park, the anticipated number of households in 2020 was 14,986 and in 2030 was 15,651 (growth of 665 households). In May 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input was not received. The preliminary figures above were used by SCAG.

¹ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

² A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Huntington Park submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmDM.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities.

SCAG did not receive additional technical corrections from the City of Huntington Park from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be

used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.³ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

³ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at: <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Huntington Park

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Huntington Park received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Huntington Park as summarized in the data and calculations in the tables below.

Huntington Park city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	549
Percent of households who are renting:	74%
Housing unit loss from demolition (2009-18):	137
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	1,601
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	18.06%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,814,000
Share of region's job accessibility (population weighted):	0.42%
Jurisdiction's HQT population (2045):	60,714
Share of region's HQT population (2045):	0.59%

Share of population in low/very low-resource tracts:	81.41%
Share of population in very high-resource tracts:	0.00%
Social equity adjustment:	170%

Calculation of Draft RHNA Allocation for Huntington Park city	
Forecasted household (HH) growth, RHNA period:	549
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	22
Replacement Need	137
TOTAL PROJECTED NEED:	708
Existing need due to job accessibility (50%)	1773
Existing need due to HQTAs pop. share (50%)	2484
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	-3364
TOTAL EXISTING NEED	893
TOTAL RHNA FOR HUNTINGTON PARK CITY	1601
Very-low income (<50% of AMI)	263
Low income (50-80% of AMI)	196
Moderate income (80-120% of AMI)	242
Above moderate income (>120% of AMI)	900

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 60,714 living within HQTAs, the City of Huntington Park represents 0.59% of the SCAG region's HQTA population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on transit accessibility. From the City of Huntington Park's median TAZ, it will be possible to reach 18.06% of the region's jobs in 2045 within a 30-minute automobile commute (1,814,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

While allocating housing need on the basis of job and transit accessibility is consistent with the statutory objectives of RHNA and represents factors in which Huntington Park scores highly, in the SCAG region many jurisdictions with especially high job and transit accessibility are lower-income and lower-resourced. The methodology applies a maximum to these so-called disadvantaged communities (DACs) equal to the 2045 household growth forecast, as described above. While Huntington Park's existing need factors score highly, as a DAC a residual factor of -3,364 is applied such that the City's total RHNA housing unit need of 1,601 units is not in excess of its 2020-2045 forecasted household growth plus approximately 3 percent.

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF IRVINE

Hearing Date: January 25, 2021

The City of Irvine has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

Attachment: Determination Regarding Appeal from the City of Irvine (Final Determination of Appeals Decisions)

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of Irvine submits an appeal and requests and requests a RHNA reduction of 8,259 units (of its draft allocation of 23,554 units. The grounds for appeal are as follows:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029)
 - a. Location of and population within HQTAs
 - b. Residual reallocation pursuant to the AFFH factor*
- 2) Existing or projected jobs-housing balance
- 3) Sewer or water infrastructure constraints for additional development
- 4) Availability of land suitable for urban development or for conversion to residential use
- 5) Lands protected from urban development under existing federal or state programs
- 6) County policies to preserve prime agricultural land
- 7) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans
- 8) The rate of overcrowding
- 9) Housing needs generated by the presence of a university campus within a jurisdiction
- 10) Loss of units during a state of emergency,
- 11) The region's greenhouse gas (GHG) emissions targets
- 12) Changed circumstances
- 13) Affirmatively furthering fair housing*

* The AFFH factor is not checked on the appeal request form but is addressed in the appeal.

Other: The City contests the regional determination of 1.34 million units, consistency with the RTP/SCS as well as the achievability of the RHNA allocation.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 25, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at: <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph012521fullagn.pdf?1611371866>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the public hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows.

- 1) a. The location and population of HQTAs were correctly identified pursuant to the adopted, Final RHNA Methodology.
- 1) b. The residual reallocation at issue is part of the adopted Final RHNA Methodology and cannot be changed through an appeal.
- 2) through 11) Irvine has not demonstrated prior to the close of the public hearing that SCAG failed to consider any of the local planning factors listed and has not demonstrated prior to the close of the public hearing that additional residential development is precluded in other areas of the City not subject to the variety of constraints identified.

¹¹ Note that since the staff reports were published, SCAG updated its website, and therefore, weblinks in the staff report and Attachment 1 have also been updated.

Irvine does not contest SCAG's application of the Final RHNA Methodology; rather, Irvine challenges the Final RHNA Methodology itself by asserting that the methodology is inconsistent with the SCS. Given the differences in process and objectives between the approved RTP and RHNA methodologies, the City has not demonstrated inconsistent regional development patterns between these processes; housing need measures are appropriately assigned through the Final RHNA Methodology based on household growth in the RTP and factors maximizing the use of public transportation and existing transportation infrastructure.

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not part of the growth **forecasting** process. They reflect housing needs in the **current** population (i.e., "existing need") and do not result in a change in regional population. In accordance with Govt. Code § 65584.04(m)(1), this existing need is distributed consistent with the development pattern included in the SCS by distributing these units based on transit adjacency and proximity to jobs.

- 12) Regarding change in circumstances, impacts from COVID-19 have not been shown to be long-range; as determined by the RHNA Appeals Board, there has not been a slowdown in major construction or a decrease in demand for housing or housing need. Furthermore, impacts from the pandemic are not unique to any single SCAG jurisdiction, and no evidence has been provided in the appeal that indicates that housing need within the jurisdiction is disproportionately impacted in comparison to the rest of the SCAG region.

With respect to other issues including the regional determination of 1.34 million units, consistency with the RTP/SCS as well as the achievability of the RHNA allocation, these are not bases for appeal and Irvine does not demonstrate the existence of any policy inconsistency which would impact the local planning factors cited.

On January 14, 2021, the City submitted an additional public comment letter responding to the staff report that had been circulated. Under Section 65584.05(d), the purpose of the public hearing is to "consider all appeals filed" and "all comments received" from HCD and local jurisdictions pursuant to Section 65584.05(c) (i.e., by December 10, 2020); however, staff and the Appeals Board nevertheless considered the City's submittal as part of the appeals.

In this letter, the City asserted a due process violation in that “SCAG’s contract agency counsel not only engaged in the prosecuting functions relating to the RHNA process by advising SCAG staff, but is concurrently advising the RHNA appeals board during the administrative appeals.” Attorney for the Appeals Board, Patricia Chen, addressed this issue during the City of Yorba Linda proceeding where she indicated that she was not serving as an advocate for any party including staff, appellants, or the Appeals Board, but rather, she has been assisting the Appeals Board and staff understand the statutory framework of the RHNA process and advising as to SCAG’s duties and responsibilities under the statute.

In the California Supreme Court decision, *Today's Fresh Start, Inc. v. Los Angeles County Office of Education*, 57 Cal.4th 197 (2013), an attorney served as both general counsel for the County Office of Education and its governing board. At issue was a legal challenge brought by a charter school seeking to overturn the County Board’s decision to revoke its charter on the grounds that the County Office and County Board had an unconstitutional overlapping adversarial and advisory functions in part because the same attorney served as general counsel for both the County Office and the County Board. The court found no impropriety on the part of the attorney serving in both roles:

“Today's Fresh Start repeatedly characterizes her as a prosecutor, but this misstates both the nature of the proceedings and [the attorney’s] role. The County Board was charged with considering and weighing the fruits of the staff investigation and what it showed in favor of and against revocation, as well as the argument and evidence of Today's Fresh Start. Statutorily, the County Office and County Board had no agenda, no stake in one outcome or the other. Thus, like many administrative proceedings the United States Supreme Court and we have previously approved, this was not a classic adversarial hearing, with a prosecutor and a defendant. There was no prosecutor here. [The attorney] presented no evidence, examined no witnesses, and made no argument in favor of revocation. Instead, [the attorney’s] role was to advise the County Board on its duties in deciding whether to direct charter revocation, just as she had previously advised County Office staff as to their powers and responsibilities when conducting an investigation of Today's Fresh Start. In neither capacity was she charged with being an advocate or an adjudicator.” (Id. at 223).

Similar to the facts underlying the decision in *Today’s Fresh Start*, the RHNA appeals are not the type of “classic adversarial hearing with a prosecutor an defendant” which case law has held, in other contexts, requires a separation of functions between counsel prosecuting a matter and counsel advising a neutral decision making body (i.e., with a prosecutor and defendant). In the present appeal (and all other appeals heard by the RHNA Appeals Board) the nature of the appeal (allocation of RHNA units based on statute and approved methodology) is not adversarial or prosecutorial, and, further, Ms. Chen

did not present evidence, examine witness, or make specific arguments in favor of an outcome. While due process may be required to separate the function of “adversarial” or “prosecutorial” advocates from attorneys advising decisionmakers, separation of functions is not required when an attorney serves in an evaluative or advisory role in a non-adversarial or prosecutorial hearing, and (in that case) the same attorney may serve as advisor to both staff and the decisionmaker. The record demonstrates and the RHNA Appeals Board specifically finds the facts demonstrate that Ms. Chen served in an evaluative and advisory role during the RHNA appeals process. As such, no due process violation occurred based on these facts.

During the appeals hearing, the Appeals Board requested additional information regarding the definition of HQTAs and HQTCs in Orange County, these issues were primarily raised with respect to Huntington Beach, but some of the issues raised in that appeal hearing were raised again with respect to the City of Irvine.

SCAG staff explained that the adopted Final RHNA Methodology is based on 2045 HQTAs and HQTCs adopted as part of the Connect SoCal Plan and further that SCAG relies on the applicable County Transportation Agency to identify these high quality transit locations. In Orange County the Orange County Transportation Agency (OCTA) was responsible for providing these data to SCAG.

SCAG verbally staff made the following points at the public hearing:

- Connect SoCal defines high quality transit areas (HQTAs) as “corridor-focused Priority Growth Areas within one half mile of an existing or planned fixed guideway transit stop or a bus transit corridor where buses pick up passengers at a frequency of every 15 minutes (or less) during peak commuting hours.”
- OCTA has not rescinded or amended their OC Transit Vision or their 2018 LRTP.

The following provides additional background information and a general timeline that was also generally verbally addressed by SCAG at the hearing:

January 2018 – OCTA completes the OC Transit Vision, a transit master plan for Orange County.¹²

- Public Engagement for OC Transit Vision includes engagement with elected officials and planning directors across the county.¹³ Page B-32 of the Public Engagement Report states:

¹² See <https://www.octa.net/pdf/OC%20Transit%20Vision%20Final%20Report.pdf>.

¹³ See <https://www.octa.net/pdf/App%20B%20Public%20Engagement.pdf>.

“Orange County elected officials and planning directors were engaged to provide input on the OC Transit Vision as well as the update to OCTA’s Long-Range Transportation Plan. Like the Citizens Advisory Committee, the feedback from these groups was tied to key milestones and helped to shape the final recommendations. The first meetings were held in May 2017, to present key findings from the State of OC Transit and to introduce the Transit Investment Framework, and in September 2017 to share preliminary recommendations for the Transit Opportunity Corridors and other service enhancements.”

- The OC Transit Vision web page states that “The recommendations from the OC Transit Vision were included in OCTA’s 2019 Long-Range Transportation Plan”.¹⁴

November 2018 – OCTA completes its 2018 Long Range Transportation Plan.¹⁵

- The 2018 LRTP identifies a commitment to “Implement OC Transit Vision” (pp. 93-94).
- Attachment D, Public Outreach Report, OCTA explicitly engaged with all 34 Orange County cities including elected officials (pp. 3-4 of Attachment D)

November 2018 – OCTA submits its project list to SCAG for Connect SoCal, including its 2018 LRTP transit network model input files.

November 2019 – SCAG releases Draft Connect SoCal for public review and comment.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City’s appeal and finds that the City’s RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG’s Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 25, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Kevin Kane, Senior Regional Planner,
(213) 236-1828, kane@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Irvine

RECOMMENDED ACTION:

Deny the appeal filed by the City of Irvine to reduce the draft RHNA allocation for the City of Irvine by 8,259 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Irvine requests a reduction of its RHNA allocation by 8,259 units (from 23,554 units to 15,295 units) on twelve issues:

- 1) Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029)
 - a. Location of and population within HQTAs
 - b. Residual reallocation pursuant to the AFFH factor*
- 2) Existing or projected jobs-housing balance
- 3) Sewer or water infrastructure constraints for additional development
- 4) Availability of land suitable for urban development or for conversion to residential use
- 5) Lands protected from urban development under existing federal or state programs
- 6) County policies to preserve prime agricultural land
- 7) Distribution of household growth assumed for purposes of comparable Regional Transportation Plans
- 8) The rate of overcrowding
- 9) Housing needs generated by the presence of a university campus within a jurisdiction
- 10) Loss of units during a state of emergency,
- 11) The region's greenhouse gas (GHG) emissions targets
- 12) Changed circumstances
- 13) Affirmatively furthering fair housing*

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

* The AFFH factor is not checked on the appeal request form but is addressed in the appeal.

Other: The City contests the regional determination of 1.34 million units, consistency with the RTP/SCS as well as the achievability of the RHNA allocation.

The City of Irvine organized its appeal into the following five categories, but SCAG’s response to the issues raised follows the appeal request form (Issues 1 through 13 identified above as well as other issues not considered bases for appeal):

1. “Appeal one” relates to application of the adopted Final RHNA Methodology, specifically:
(A) contestation of the population within a high-quality transit area (HQTAs) and the reallocation of the so-called “residual” need.
(B) Affirmatively Furthering Fair Housing (AFFH) which was not included in Irvine’s appeal request form but centers on the reallocation of residual housing need based on AFFH.
2. “Appeal two” is based on the local planning factors (Issues 2 through 11 above) which Irvine contends were not sufficiently considered.
3. “Appeal three” cites changed circumstances (Issue 12), primarily related to job losses and other observed changes stemming from the COVID-19 pandemic.
4. “Appeal four” contests the regional determination of 1.34 million housing units, which is not a basis for appeal.
5. “Appeal five” relates to the issue of consistency between the RHNA and SCAG’s Sustainable Communities Strategy (SCS)—which along with the Regional Transportation Plan (RTP) form Connect SoCal. While this is not a basis of appeal, it is substantively similar to arguments raised in Irvine’s “Appeal Two” related to the local planning factors of RTP consistency and regional GHG emissions (Issues 7 and 11).

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Irvine’s RHNA allocation. In Issue 1a, the location and population of HQTAs were correctly identified pursuant to the adopted, Final RHNA Methodology. In Issue 1b, the residual reallocation at issue is part of the adopted, Final RHNA Methodology and cannot be changed through an appeal. With respect to Issues 2 through 11, Irvine has not demonstrated that SCAG failed to consider any of the local planning factors listed and has not demonstrated that additional residential development is precluded in other areas of the city not subject to the variety of constraints identified. With respect to Issue 12, given the long-range nature of our planning process and Irvine’s failure to demonstrate how changed circumstances uniquely impact the city such that its housing need is reduced, a reduction is not recommended.

With respect to other issues including the regional determination of 1.34 million units, consistency with the RTP/SCS as well as the achievability of the RHNA allocation, these are not bases for appeal and Irvine does not demonstrate the existence of any policy inconsistency which would impact the local planning factors cited.

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Irvine: 23,554 units
 Very Low Income: 6,379 units
 Low Income: 4,225 units
 Moderate Income: 4,299 units
 Above Moderate Income: 8,651 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Irvine. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1a: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code section 65584.05 (b)(2)] – HQTAs location and population.***

The City of Irvine contends that SCAG’s assessment of 2045 HQTAs and population in 2045 HQTAs were inaccurate. The basis for this issue is that the methodology was not properly applied, pursuant to Government Code section 65584.05(a)(2):

“The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section 65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.”

Irvine claims that three of the four stops which associated with 2045 HQTAs, which are relied upon in the RHNA methodology’s assessment of existing housing need are not in the Connect SoCal project list and therefore should not be considered HQTAs. Furthermore, Irvine contests SCAG’s measurement of 2045 forecasted population within its HQTAs areas, contending that it should be lower.

SCAG Staff Response: SCAG’s final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD’s regional housing needs assessment. Only improper application of the methodology is grounds for an appeal. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction.

With respect to the statutory objectives¹, SCAG used objective measures to advance certain principles, but since local and regional conditions vary tremendously across the state and over time, there are few consistent quantitative standards which can be used to evaluate all aspects of the methodology. Ultimately, however, the RHNA statute vests HCD with the authority to decide whether statutory objectives have been met.

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As described in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the Final RHNA Methodology was found by HCD to further the five statutory objectives in large part due to its use of objective factors and as such cannot consider factors differently in one jurisdiction versus another.

HQTA Location

SCAG appreciates the City of Irvine’s input into SCAG’s HQTA definition which was provided through SCAG’s Technical Working Group (TWG) in October 2019. This input resulted in the removal of freeway-running transit corridors with no bus stops on the freeway alignment from consideration as high-quality transit corridors (HQTC). This modification to the definition explicitly retained the areas surrounding the station-stop areas as those are proximate to high-quality transit service consistent with the HQTC definition in CA Pub. Res. Code § 21155(b). Ultimately, this led to a sharper regional definition for areas which are serviced by high quality transit and coincidentally led to a substantially lower HQTA population within the City of Irvine.

Irvine’s appeal now argues that the three freeway-running BRT station areas within its boundaries (Alton Parkway, Jeffrey Road, and Spectrum Center) should be excluded from the SCAG definition because they are not included in the Connect SoCal project list, because OCTA did not first consult with the City of Irvine before providing information regarding these transit service improvements to SCAG, and due to various land-use constraints in the 0.5-mile radius areas surrounding these stops.

First, SCAG’s definition of high-quality transit corridors is found in Appendix A of Connect SoCal’s Transit Technical Report (attached) and indicates that:

Planned HQTCs and major transit stops are future improvements that are expected to be implemented by transit agencies by the RTP/SCS horizon year of 2045. These are assumed by definition to meet the statutory requirements of an HQTC or major transit stop. SCAG updates its inventory of planned major transit stops and HQTCs with the adoption of a new RTP/SCS, once every four years.

The nature of bus services is that routes and service frequency can change periodically, thus a CTC’s estimate of future transit service frequency is the best estimate available at a given point in time—in this instance, the point in time required to complete Connect SoCal. Future year HQTCs and

HQTAs are an important component of regional planning and facilitate the achievement of statutory goals including RHNA objectives to promote infill, encourage efficient development patterns, achieve the region’s GHG emissions targets, and improve the balance between jobs and housing.

OCTA’s 2018 and most recent Long Range Transportation Plan (LRTP) includes both the I-5 and SR-55 BRT projects, and their LRTP was developed with stakeholder engagement. In reviewing public comment records, Irvine did not appear to submit any written comments to OCTA on the Draft 2018 LRTP. OCTA staff were clear in stating that the LRTP is intended to be an input to SCAG’s RTP update. OCTA I-5 BRT has 15-min AM and PM peak headways beginning in 2027 per the OCTA LRTP and is coded in the 2045 Plan. Both I-5 and SR-55 BRT projects are included in RTP Project ID 2160008. Both routes are in the HQTAs maps of the Connect SoCal Transit Technical Report (attached).

Irvine states that the I-5 and SR-55 BRT station stops are conceptual and not yet been studied or deemed feasible. For the RTP purposes this is not an issue – it is understood that further project-level planning and environmental studies would be performed in accordance with state and federal law and SCAG relies on CTCs to provide these assumptions. SCAG is required to make assumptions about RTP projects’ scope and timeline to support modeling and emissions analysis needed for the conformity determination. SCAG’s Final RHNA Methodology explicitly made use of Final Connect SoCal data points such as HQTAs which are a vetted, well-established, well-understood mechanism for linking areas of current and potential future growth with transit access with the objective of reducing GHG emissions among other outcomes. SCAG’s definition of an HQTA is described above and has been subject to extensive discussion and public review.

Irvine also identifies constraints to residential development in the areas surrounding these station-stops. However, the RHNA methodology in no way specifies where, within a jurisdiction’s boundaries housing should be promoted. The methodology uses objective, region-wide factors to determine one jurisdiction’s housing need versus another. It is the role of the local jurisdictions’ housing element to decide where units allocated to the jurisdiction through the RHNA process are accommodated. Even still, the RHNA methodology uses TAZ-level growth forecast information provided by the City of Irvine to assess future population in HQTAs so as to assess future HQTA population as equitably as possible region-wide. Per Attachment 1, following additional review opportunities, SCAG directly used the local input TAZ growth distribution for the City of Irvine as the basis for this measure and any constraints to development in these station areas would have been amply considered during that process.

The Regional Council decided to include planned HQTAs following this definition as a component of the RHNA methodology. The evidence submitted by the City of Irvine does not suggest that these three stations should be excluded from consideration as HQTAs and therefore an HQTA. As such,

the inclusion of these stations does not indicate a misapplication of the adopted final RHNA methodology.

HQTA Population

Irvine also contends that the HQTA population should be lower, suggesting that SCAG may not have “prorated” TAZ populations based on which portions of TAZs are inside of HQTAs versus outside of HQTAs. Irvine totals all the TAZs which lie completely or partially with HQTA boundaries and indicates a total population of 43,719 which is slightly lower than the HQTA population of 43,855 used by SCAG (note that Irvine’s appeal incorrectly states that this figure is 43,892).

In order to estimate the population of each city which lies within each HQTA boundary, SCAG uses small area forecast data provided through the Bottom-Up Local Input and Envisioning Process. While the transportation analysis zone (TAZ) geography is more commonly used, SCAG’s forecast contains a higher degree of accuracy and is associated with local general plans down to the parcel level. In addition, TAZs contain an average of 2,000 residents across the region and as such are not sufficiently accurate for measuring anticipated population within a precisely defined HQTA. Thus, SCAG relies on forecasted population from Connect SoCal in Scenario Planning Zones (SPZs) to associate with HQTA boundaries using area-weighted interpolation. As SPZs are approximately 1/10th the size of TAZs, this is the most accurate method that could be devised to estimate future populations in bespoke areas across a large region using locally reviewed input data.

The attached map of Irvine’s HQTA areas by population and overlays this information with the HQTAs within the city. 150 SPZs lie fully within HQTA boundaries. An additional 127 SPZs lie partially within HQTA boundaries—this population is proportionally allocated to HQTAs based on how much of each SPZ’s land area is within HQTA boundaries. The sum results in 43,855 people being assessed as within HQTA boundaries in Irvine. These data are equivalent to the small-area population forecast data in Connect SoCal’s Growth Vision (discussed further in Attachment 1), which for Irvine matches the data provided by the City during the Bottom-Up Local Input and Envisioning Process. These data have been continuously available to local jurisdictions for review through the Scenario Planning Model (SPM).

It is important to have regionally standardized approaches in all parts of the RHNA methodology in order to ensure that housing units are allocated fairly and consistently, and this approach is part of the adopted Final RHNA Methodology. Irvine has not provided evidence to suggest that the process underlying the adopted Final RHNA Methodology for arriving at HQTA population is in any way flawed or incorrectly applied. As such, SCAG staff does not recommend a reduction in the City’s draft RHNA allocation based on this issue.

Issues 1b and 13: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code section 65584.05 (b)(2)] -- residual reallocation pursuant to the AFFH factor.

Irvine contends that the residual reallocation distribution component of the RHNA methodology, which relates to Disadvantaged Communities (DACs) and requirements to affirmatively further fair housing (AFFH), was based on a failure to adequately consider information for the methodology pursuant to Government Code section 65584.05(b)(2):

“The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section 65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.”

Note that Irvine does not base its appeal on Affirmatively Furthering Fair Housing, which is an allowable appeal basis. Specifically, Irvine contends that:

- *TCAC/HCD data relied upon for this part of the RHNA methodology were not intended for this purpose and their accuracy in capturing local conditions is questionable,*
- *The manner in which “Residual need” is redistributed within a county was not adequately vetted prior to its adoption by the Regional Council,*
- *The City of Santa Ana’s draft RHNA allocation is based on projected growth figures which are outdated which impacts Irvine’s RHNA allocation (these issues have also been raised in Irvine’s separate appeal of Santa Ana’s draft RHNA allocation), and*
- *The redistribution of residual need portion of the RHNA methodology is contrary to Sustainable Communities Strategy goals, e.g. promoting job and transit access.*

SCAG Staff Response: First, the SCAG Regional Council took action on both the Draft and Final RHNA methodology pursuant to properly noticed agendas and every member of the Regional Council, in addition to a significant number of members of the public, had ample opportunity to place on the record, both in writing and in person, their relevant input for the Regional Council’s consideration. For example, no less than fourteen (14) letters were acknowledged on the record and these were made available for public and SCAG review prior to the Regional Council’s action on the draft methodology, all in compliance with applicable law. It should also be noted that the draft methodology was reviewed by HCD and was found to further statutory objectives of RHNA on January 13, 2020. On March 5, 2020, SCAG Regional Council adopted the draft methodology as the final methodology.

Further, for the draft methodology, many members of the public offered oral testimony on the issue both in support of the original staff recommendation and in support of the alternative draft

RHNA methodology that was ultimately approved after a robust discussion among the Regional Council, with staff offering input and answering questions as requested. Both methodologies had been presented in the staff report that was published in the November 7th, 2019 Regional Council meeting agenda in advance of the meeting in accordance with applicable law. Finally, members of the Regional Council were given wide opportunity to offer input and comments during the course of the discussion and consideration of the item.

The November 7th Regional Council action was preceded by more than nine months of preparatory work and the regional planning process is necessarily complex and multi-faceted. That there are competing interests and priorities is not new. Since the start of the RHNA process in October 2018, SCAG staff has been committed to a fair and transparent process from the very beginning.

The RHNA methodology is a complex balance of several regional objectives ranging from job-housing balance to affirmatively furthering fair housing. Ultimately, AFFH is a RHNA objective and the residual reallocation is part of the adopted final RHNA methodology—it is not an addition afterward, nor is it an optional element. Government code 65584.04(i) vests authority to assess whether a methodology furthers the statutory objectives in HCD. In HCD’s 1/13/2020 letter (attached), HCD finds that SCAG’s RHNA methodology furthers all five statutory objectives, stating,

“HCD applauds the inclusion of the affirmatively furthering fair housing adjustment factor in the methodology. This factor directs more lower income RHNA to higher opportunity areas and reduces allocations in segregated concentrated areas of poverty, as defined in the HCD/TCAC Opportunity Maps, which evaluate access to opportunity, racial segregation, and concentrated poverty on 11 dimensions, which are all evidence-based indicators related to long term life outcomes.”

This quotation makes clear that this adjustment was critical in securing HCD’s finding that the RHNA methodology furthers the AFFH objective of RHNA. While Irvine notes “limitations” to this data source, such an argument is not unique to this, or any other data source. Not only had the 2019 opportunity mapping data been part of previous proposed variations of the methodology, but these data went through an extensive development and public review process during their development by the California Fair Housing Task Force (see <https://www.treasurer.ca.gov/ctcac/opportunity.asp>). and vetting through TCAC and HCD. The RHNA methodology uses several robust, vetted data sources which are agreed upon in advance and are able to equitably assess conditions between one jurisdiction and another. The City does not provide evidence regarding any error in how Irvine’s local conditions were reflected in this dataset, and changes cannot be made to the adopted RHNA methodology through the appeals process.

Irvine also contends that Santa Ana’s growth forecast is outdated, which results in a higher draft RHNA allocation for the City of Irvine, and that there was insufficient time to identify this issue in

advance of the adoption of the RHNA methodology. The Bottom-Up Local Input and Envisioning Process, described in Attachment 1, afforded equal opportunity for Santa Ana, Irvine, and 195 other local jurisdictions to provide growth forecast information in the same manner between 2017 and 2018. Specific issues related to Santa Ana will be discussed in more detail during the time allotted to discuss the appeals on Santa Ana's draft RHNA allocation.

The City contends that it is bearing the burden of other jurisdictions; however, the residual reallocation is part of the adopted Final RHNA Methodology—not a step which is “added” afterward but is a plan to allocate need based on regional considerations. Irvine further contends that Orange County is singled out regarding the residual reallocation; however, the methodology is consistent in its application across counties and does not include any specific exemptions or treatments for Orange County.

Irvine's contention that the residual need component of the Final RHNA Methodology is inconsistent with the Sustainable Communities Strategy (SCS) portion of Connect SoCal is flawed. The RHNA methodology is a complex balance of several regional objectives ranging from jobs-housing balance to AFFH. Ultimately, AFFH is one of the RHNA objectives described in Government Code 65584(d) and the residual reallocation is part of the adopted Final RHNA Methodology. It furthers the AFFH objectives by ensuring that RHNA allocations are not concentrated in jurisdictions with lower opportunity scores, reallocating them to jurisdictions with higher opportunity scores. Irvine asserts that this is to the detriment of SCS goals and thus injures the SCS consistency described in Government Code 65584.04(m)(1), which is a finding which SCAG must make following the adoption of the final RHNA allocation. The reason for this assertion is that DAC jurisdictions may not receive allocation on those bases, compromising other statutory objectives and the SCS consistency described in. However, the residual reallocation at issue is made to non-DAC jurisdictions *on the basis* of their job and transit access levels.

Since the residual reallocation is part of the adopted RHNA methodology which was found by HCD to further AFFH, and since Irvine has not identified an error in how the methodology was applied, SCAG staff does not recommend a reduction based on this issue.

Issue 2: Existing or projected jobs-housing balance [Government Code section 65584.04(e)(1)].

Government Code section 65584.04(e)(1) provides that to the extent that sufficient data is available, the following factor shall be included in developing the methodology that allocates regional housing needs:

“Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.”

The City contends that its job centers are regional in nature and that employees may live in adjacent jurisdictions. Requiring the City to find adequate sites for both the aggregate total of the RHNA allocation and the various income levels may require employment centers to be rezoned, and these job losses would negatively impact Irvine’s jobs and housing relationship.

SCAG Staff Response: Irvine does not provide evidence to indicate that SCAG failed to consider the jurisdiction’s jobs and housing relationships to merit a reduction in its Draft RHNA Allocation. In recognition of the fact that in the SCAG region only 20% of workers live and work in the same jurisdiction, the RHNA methodology is based on *access to jobs*. This is consistent with Irvine’s contention that living in an adjacent jurisdiction to one’s workplace may in fact be beneficial. Despite having a very large employment base, Irvine ranks only 28th amongst larger cities in the region based on the job access measure used in the methodology (17.45% of 2045 regional employment accessible—see Attachment 1 for details). Irvine’s 2020 projected employment-to-households ratio in Connect SoCal is 2.73, which is far higher than the 1.37 ratio for the SCAG region and is the 2nd highest amongst the region’s larger cities².

In its appeal the City notes that job losses from rezoning employment centers for housing would negatively impact the city’s jobs-housing relationships; however, since the city’s employment base exceeds its households by a wide margin, it is unclear from the appeal how additional housing stock would negatively impact this relationship. Therefore, SCAG staff does not recommend a reduction based on this issue.

² Above 50,000 population, per 2019 DOF estimates

Issues 3 and 4: Sewer or water infrastructure constraints for additional development [Section 65584.04(e)(2)(A)] and availability of land suitable for urban development or conversion to residential use [Section 65584.04(e)(2)(B)].

Government Code section 65584.04(e)(2) provides that to the extent that sufficient data is available, the following constraints shall be included in developing the methodology that allocates regional housing needs:

“(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.”

The City contends that the majority of land suitable for urban development in the City is entitled through development agreements that allow units to be constructed in phases and that nearly all planning areas have met the maximum number of units and there is no vacant land available. Also, the City has areas identified as Natural Community Conservation Plan/Habitat Conservation Plan (NCCP/HCP), which limit development.

SCAG Staff Response: For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. It is not evident from Irvine’s appeal that a water provider has rendered a decision that would prevent the city from providing necessary infrastructure.

With respect to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and

land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can and must consider other opportunities for development besides vacant land. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth. Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to determine RHNA need at the jurisdictional level. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

While Irvine notes that development agreements typically take place in phases and cannot be modified by the City and that other areas are protected natural areas, these factors do not constitute evidence that additional residential development in any of the myriad forms permitted for inclusion in housing elements is not possible in all other areas of the city.

SCAG recognizes there are many environmental (e.g., NCCP/HCP protections) and other constraints to development on portions of the land in the City of Irvine. However, this does not preclude additional residential development (i.e. infill) outside of such constrained areas. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, alternative zoning and density, and accessory dwelling units. On June 10, 2020, HCD released extensive guidelines for housing element site inventories.³ A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs). Specifically, page 32 of the guidelines indicates that “In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance.”

³ See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf

Market conditions and the cost to develop and construct the allocated new housing units within a jurisdiction should not be considered by SCAG as a justification for a RHNA reduction since the RHNA Allocation does not provide a building quota or mandate. The City is not responsible for obtaining land or developing housing, it is only required to plan and zone for its determined housing need. Based on the above, SCAG staff does not recommend a reduction based on this issue.

Issue 5: Lands protected from urban development under existing federal or state programs [Section 65584.04(e)(2)(C)].

Government Code section 65584.04(e)(2)(C) provides that to the extent that sufficient data is available, the following constraint shall be included in developing the methodology that allocates regional housing needs:

“Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.”

The City contends that certain areas of Irvine are protected from development by the regional NCCP and the City of Irvine Open Space Initiative (City Resolution 88-1).

SCAG Staff Response: See also response to Issues 3 and 4 above. It is presumed that planning factors such as lands protected by federal and state programs have already been accounted for prior to the local input submitted to SCAG since such factors are required to be considered at the local level. No evidence was submitted that these areas have changed since the most current input provided prior to October 2018.

In addition, while the City of Irvine has indicated it cannot accommodate units in these specific areas, no evidence has been provided that the jurisdiction cannot accommodate its RHNA allocation in other areas. The presence of protected open space alone does not reduce housing need nor does it preclude a jurisdiction from accommodating its housing need elsewhere.

Furthermore, while SCAG commends the City’s commitment to conservation and habitat protection, the City’s decision to join the regional NCCP and to implement City Resolution 88-1, does not constitute evidence that additional residential development in any of the myriad of forms permitted for inclusion in housing elements (as discussed above in Response to Issues 3 and 4) is not possible in all other areas of the city. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction’s RHNA allocation based on this factor.

Issue 6: County policies to preserve prime agricultural land [Section 65584.04(e)(2)(D)].

Government Code section 65584.04(e)(2) provides that to the extent that sufficient data is available, the following factor shall be included in developing the methodology that allocates regional housing needs:

“(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.”

The City contends that its General Plan Conservation and Open Space Element includes Objective L-10 that encourages the maintenance of agriculture in undeveloped areas of the City until the time of development and in areas no available for development.

SCAG Staff Response: See also response to Issues 3, 4 and 5 above. The City cites an objective in its general plan which encourages maintenance of agricultural areas until the time of development and in areas not available for development. However, a city’s general plan objective would not fit the statutory criteria of a county policy to preserve prime agricultural land within an unincorporated area, nor does Irvine’s appeal indicate why the City’s housing need would in any way be impacted by county policies governing unincorporated areas. Also, no local ballot measure is presented. Therefore, SCAG staff does not recommend a reduction based on this issue.

Issues 7 and 11: Distribution of household growth assumed for purposes of comparable Regional Transportation Plans [Government Code section 65584.04(e)(3)] and the region’s greenhouse gas (GHG) emission targets [Government Code section 65584.04(e)(12)].

Irvine contends there to be an inconsistency between the Regional Housing Needs Assessment and Sustainable Communities Strategy. This is not a basis for an appeal; however, issues raised are common to two factors that are bases for appeal. Government Code section 65584.04(e) provides that to the extent that sufficient data is available the following factors shall be included in developing the methodology that allocates regional housing needs:

“(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

...

(12) *The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.”*

Irvine argues that the RHNA methodology is inconsistent with the growth patterns of Connect SoCal largely due to its inclusion of an “existing need” of 836,857 units—a housing unit total which is not reflected in the household forecast of Connect SoCal and cites vehicle miles traveled (VMT) per capita statistics to illustrate longer commutes for City of Irvine residents.

SCAG Staff Response: While Connect SoCal is required under state planning law to identify areas sufficient to house the 8-year RHNA need pursuant to Government Code Section 65080(b)(2)(B)(iii), the RHNA allocation of housing need is a distinct process set forth under state housing law, Government Code Section 65584 *et seq.* The RHNA requirements address the mandate to plan for housing units to further statutory objectives. The RHNA establishes “minimum housing development capacity that cities and counties are to make available via their land use powers to accommodate growth within a planning period.”⁴

The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. Actual housing production depends on a variety of factors external to the identification of need through RHNA—local jurisdictions frequently have sufficient zoned capacity but actual housing construction depends on market and other external forces. For example, per HCD’s Annual Progress Reports covering new unit permits through 2018, the region’s low and very-low income permits totaled 19,328 units (2,494/year) compared to the RHNA allocation of 165,579 units (21,365/year).

In contrast, the Connect SoCal Growth Forecast is an assessment of the reasonably foreseeable future pattern of growth given regional factors such as births, deaths, migration, and employment growth as well as local factors, which includes the availability of zoned capacity.⁵

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. They reflect additional latent housing needs in the current population (i.e., “existing need”) and do not result in a change in regional population.

⁴ Concurrence in Senate Amendments, AB 1771 (Bloom), as amended August 24, 2018 Comments at p.4 (Original Committee Reference: H. & C.D.).

⁵ For details, see Connect SoCal’s Demographics and Growth Forecast Technical Report at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_demographics-and-growth-forecast.pdf

Ultimately it is this difference between these processes which accounts for the difference between the reasonably foreseeable household growth rate included in Connect SoCal and the development capacity target which RHNA envisions for the City of Irvine.

Following adoption of SCAG’s Final RHNA allocation, local jurisdictions must update their housing elements (as needed) to provide sufficient zoned capacity for the total 6th Cycle allocation pursuant to state guidelines. Updated housing elements are due in October 2021. Pursuant to Government Code Section 65583(c)(1)(A), local jurisdictions will have until January 2025 to complete any necessary rezoning to accommodate their RHNA allocation. Until this planning work is done at the local level, it would be speculative for Connect SoCal to make assumptions about potential development levels and patterns that includes the 6th Cycle “existing need.” Once this process is complete, in future RTP/SCS development processes SCAG will re-evaluate the reasonably foreseeable future growth pattern, including the potential impact of any policy changes made in response to the 6th cycle RHNA allocations.

An additional key difference is that the RHNA process only permits SCAG to allocate jurisdiction-level totals (by income category), whereas the RTP/SCS requires SCAG to model future transportation patterns and Greenhouse Gas (GHG) impacts, which requires an estimate of *where* within the jurisdiction future growth may occur. As such, the RHNA process requires adapting Connect SoCal’s key policy direction in order to ensure that *development patterns* are generally consistent across the two processes. For example, Connect SoCal achieves its jobs-housing balance objectives in part by envisioning a set of 72 individual job centers across the region; however, this relies on within-jurisdiction prediction of the location of development. The final RHNA process adapts this concept by developing a measure of job accessibility at the jurisdiction-level—using Connect SoCal data—to ensure consistent strategic and policy direction. Similarly, half of existing need is allocated on the basis of the jurisdiction’s share of the region’s population in a HQTAs in 2045 as defined in Connect SoCal and discussed above. This consistent strategic and policy direction results in the Final RHNA Methodology and Draft RHNA Allocation’s consistency with the development patterns in the SCS, pursuant to Government Code section 65584.04(m)(1):

“It is the intent of the Legislature that housing planning be coordinated and integrated with the regional transportation plan. To achieve this goal, the allocation plan shall allocate housing units within the region consistent with the development pattern included in the sustainable communities strategy.”

For further discussion see Attachment 1 as well as Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf

Relatedly, the California Air Resources Board (CARB) GHG emissions reduction target of 19% by 2035 was achieved by Connect SoCal which, per the above, has sufficient policy alignment and consistency in development patterns with the RHNA methodology—in part due to the existing need measures of job and transit access which assign housing units on the basis of key drivers of regional GHG reduction potential. While Irvine cites VMT per capita statistics based on standards within the city, this analysis does not address regional GHG emissions which are the appeal basis in Government Code section 65584.04(e)(12) and are achieved through the RHNA methodology's aforementioned policy alignment with Connect SoCal.

Since the City of Irvine has not provided evidence to suggest that its Draft RHNA Allocation was based on a failure to consider these local planning factors, SCAG staff does not recommend a reduction on these bases.

Issue 8: The rate of overcrowding [Section 65584.04(e)(7)].

Government Code section 65584.04(e)(7) provides that to the extent that sufficient data is available, “the rate of overcrowding” shall be included as a factor in developing the methodology that allocates regional housing needs.

The City contends that the definition of “overcrowding” has not been clearly established and recommends that SCAG determine a definition rather than use the US Census Bureau’s definition of one person per room.

SCAG Staff Response: Irvine argues that there is lack of clarity in the Census Bureau’s definition of overcrowding. However, no explicit measure of overcrowding at the jurisdictional-level is used, nor is required to be used, in SCAG’s adopted final RHNA methodology. Irvine does not provide any evidence to suggest a reduction in the City’s housing need is merited on the basis of any measure of overcrowding. Therefore, SCAG staff does not recommend a reduction based on this issue.

Issue 9: Housing needs generated by the presence of a university campus within a jurisdiction [Section 65584.04(e)(9)].

Government Code section 65584.04(e)(9) provides that to the extent that sufficient data is available, the following factor shall be included in developing the methodology that allocates regional housing needs:

“The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.”

The City contends that that there are three colleges or universities within its boundaries and that the COVID-19 pandemic has disrupted in-person instruction in many instances. The City suggests that fewer students and faculty may need housing on or near campus.

SCAG Staff Response: While the City argues that fewer students and faculty may need housing on or near campus, it does not provide evidence from these colleges/universities or other sources which would indicate how and to what extent this change will reduce housing need within the household population of the City of Irvine (i.e. outside of dormitories or school-provided housing and thus under the purview of Connect SoCal’s household growth forecast and RHNA), particularly over the 8-year planning horizon of RHNA. The City simple speculates that “it is a very realistic possibility that restrictions on the percentage of students permitted to attend in person classes may not be lifted for years to come, dramatically impacting the number of students and faculty needing on campus or near campus housing.” Therefore, SCAG staff does not recommend a reduction based on this issue. See also the Response to Issue 12, regarding changed circumstances and COVID-19 below.

Issue 10: *Loss of units during a state of emergency [Government Code section 65584.04(e)(11)].*

Government Code section 65584.04(e)(11) indicates that to the extent that sufficient data is available the following factor shall be included in developing the methodology that allocates regional housing needs:

“The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.”

The City contends that there has been a major wildfire in or near Irvine every decade since the 1980s.

SCAG Staff Response: Irvine does not provide any evidence to suggest that wildfire risk either was not sufficiently considered in SCAG’s development of the RHNA methodology or otherwise may merit a reduction of housing needs in the City of Irvine. Therefore, SCAG staff does not recommend a reduction based on this issue.

Issue 13: Changed circumstances [Government Code section 65584.05(b)(3)].

Government Code section 65584.05(b)(3) provides that to the extent that sufficient data is available, the following factor shall be included in developing the methodology that allocates regional housing needs:

“A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04.”

Irvine primarily contends that job losses stemming from COVID-19 merit a reconsideration of long-range employment forecasts. Irvine also notes that the rise in telecommuting and a purposed shift in desire for more open space and less dense living are also changed circumstances resulting from COVID-19 which will continue following the pandemic. The city contends that reliance on existing 2045 employment projections in the current RHNA methodology is thus flawed.

Irvine cites a City resolution encouraging long-term telecommuting, high regional unemployment rates currently experienced, instances of corporate campuses being eliminated, decreases in passenger air travel, and potential reduction in in-person education at colleges and universities in Irvine. In addition to providing statewide unemployment statistics, the City indicates that 2,490 jobs have been lost in Irvine since July 2020.

SCAG Staff Response: While SCAG staff recognizes that COVID-19 presents unforeseen circumstances and that local governments have been affected by significant unemployment, these facts, as presented by the City, “do not “merit a revision of the information submitted pursuant to subdivision (b) of Section 65584.04” (Government Code section 65584.05(b)(3)). Furthermore, section 65584.05(b) requires that,

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

While the City or Irvine provides several anecdotes related to COVID-19’s economic and social impacts, comparable data following this standard is not provided by the City of Irvine.

SCAG’s Regional Council delayed the adoption of the 2020 RTP/SCS by 120 days in order to assess the impact of COVID-19; however, the document’s long-range (2045) forecast of population, employment, and household growth remained unchanged. The Demographics and Growth Forecast Technical Report outlines the process for forecasting long-range employment growth

which involves understanding national growth trends and regional competitiveness, i.e., the SCAG's region share of national jobs. Short-term economic forecasts commenting on COVID-19 impacts generally do not provide a basis for changes in the region's long-term competitiveness or the region's employment outlook for 2023-2045. As such, SCAG's assessment is that comparable data would not suggest long-range regional employment declines.

The COVID-19 pandemic has had various impacts throughout Southern California; however it has not resulted in a slowdown in major construction nor has it resulted in a decrease in a demand for housing or housing need. Southern California home prices continue to increase (+2.6 percent from August to September 2020) led by Los Angeles (+10.4 percent) and Ventura (+6.2 percent) counties. Demand for housing as quantified by the RHNA allocation is a need that covers an 8-year period, not simply for impacts that are in the immediate near-term. Irvine does not provide evidence suggesting that any of the other potential COVID impacts listed (e.g. job losses, telecommuting increases, a desire for open space, lower in-person college enrollment, etc.) reduce housing need in any way.

Moreover, impacts from COVID-19 are not unique to any single SCAG jurisdiction and no evidence has been provided in Irvine's appeal that indicates that housing need within the City is disproportionately impacted in comparison to the rest of the SCAG region by these potential changes. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation.

Other: HCD's regional determination of 1.34 million housing units, achievability and RTP/SCS consistency.

Irvine contends that HCD's regional determination of 1.34 million housing units violates state law.

Irvine also argues that "achievability" is a standard.

Irvine argues there to be an inconsistency between the Regional Housing Needs Assessment and Sustainable Communities Strategy.

SCAG Staff Response:

Regional Determination

SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The regional determination is not a basis for appeal per adopted RHNA Appeals Procedures as it is not within the authority of the Appeals Board to make any changes to HCD's regional housing needs determination.

SCAG's development of a consultation package to HCD regarding the regional housing needs determination took place during the first half of 2019. During this time SCAG extensively reviewed a wide range of reports which commented on housing needs in the state and region, including studies from USC, UCLA, UC-Berkeley, the California Legislative Analyst's Office, Beacon Economics, McKinsey, the Center for the Continuing Study of the California Economy, and others. These studies covered a wide range of approaches and methodologies for understanding housing need in the region and state. On March 27, 2019 SCAG convened a panel of fifteen experts in demographics, economics, and housing planning to assess and review the region's housing needs in the context of SCAG's regional determination.

Notwithstanding the merits of the various approaches toward estimating regional housing need, state statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow sufficient time for the development of a methodology, appeals, and local housing element updates.

The defined timeframes are guided by the deadline for the housing element revisions for HCD's RHNA determination and SCAG's Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region's existing and projected housing need pursuant to Section 65584.01 at least two years prior to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This "determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments." Govt. Code § 65584.01(b). HCD begins the process 26 months prior to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the RHNA allocation methodology up to 30 months prior to the scheduled revision. By necessity, the data used for these processes is data available at that time.

During both the consultation process and the filing of SCAG's formal objection to HCD's regional determination, SCAG extensively reviewed the issues brought up in these recent reports including a variety of indicators of housing backlog such as cost burden, overcrowding, demolition, and vacancy. In addition, SCAG has a well-developed program for forecasting population and household growth in the region which is conducted with the advice and collaboration of the state Department of Finance's forecasting staff. SCAG assessed the relationship between the measures used and not used in its analyses in order to avoid overlap ("double counting").

While the RHNA statute prescribes specific requirements for HCD in determining the regional housing need (e.g., the determination shall be based on population projects produced by the Department of Finance and regional population forecasts used in preparing regional transportation

plans), it allows HCD to accept or reject information provided by SCAG with respect to the data assumptions from SCAG's growth forecast or to modify its own assumptions or methodology based on this information. Following SCAG's formal objection filed on September 18, 2019, HCD did not materially change the regional determination following SCAG's formal objection filed on September 18, 2019, and there are no further mechanisms provided for in statute to contest their decision. Nevertheless, SCAG has a statutory obligation to complete the remaining steps required in the RHNA process—namely the adoption of a Final RHNA Methodology, conducting an appeals process, and issuing final RHNA allocations.

A report by Freddie Mac's Economic & Housing Research Group titled "The housing supply shortage: State of the states" was released in February 2020, and a slide deck titled "Double counting in the latest housing needs assessment" was placed on the Embarcadero Institute's website during 2020 (last update September 2020). Notwithstanding the merits (or lack thereof) of these studies, in order for such materials to have been considered by HCD, they would have had to have been submitted by June of 2019 as discussed above. Furthermore, as discussed above, SCAG's consultation package to HCD regarding the regional determination contained an extensive quantitative assessment of overcrowding, vacancy, and cost burden factors and a discussion of the issue of double-counting.

Additionally, these studies are regional in nature and do not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was incorrectly applied to determine the jurisdiction's share of regional housing need. Because a regional study does not meet this criterion, these studies cannot be used to justify a particular jurisdiction's appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

In sum, it would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates. Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction's draft RHNA allocation. For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's draft RHNA allocation.

Achievability

While an objective of the RHNA statute is to facilitate the eventual construction of new housing units to meet housing needs, achievability of this objective is not a basis for appeal. Citing its inclusionary housing program, Irvine estimates that 127,580 sites would be needed to accommodate the very low income RHNA allocation. However, the ability to count lower income RHNA sites in the housing element is set forth by HCD, not Irvine's estimate. As described above, HCD's site inventory guidelines describe a wide range of alternative options for accommodating housing need identified in the RHNA. Therefore, SCAG staff does not recommend a reduction based on this issue.

Consistency between RHNA and the SCS

While the consistency between the RHNA and the SCS is not a basis for appeal, the issues raised by the City are addressed in the responses to Issues 7 and 11 above. Staff does not recommend a reduction based on this issue.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Irvine had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Irvine’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁶ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁷ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Irvine, the anticipated number of households in 2020 was 103,382 and in 2030 was 112,404 (growth of 9,022 households). In March 2018, SCAG staff and CDR staff met with

⁶ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁷ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

staff from the City of Irvine to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Irvine submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmddm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Irvine and incorporated them into the Growth Vision in December 2019. Based on these corrections, the City of Irvine's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁸ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁸ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Irvine

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Irvine received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Irvine as summarized in the data and calculations in the tables below.

Irvine city statistics and inputs:

Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	7443
Percent of households who are renting:	52%
Housing unit loss from demolition (2009-18):	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	19,055
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	17.45%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,754,000
Share of region's job accessibility (population weighted):	2.10%
Jurisdiction's HQTAs population (2045):	43,855
Share of region's HQTAs population (2045):	0.43%
Share of population in low/very low-resource tracts:	5.76%
Share of population in very high-resource tracts:	40.34%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for Irvine city	
Forecasted household (HH) growth, RHNA period:	7443
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	247
Replacement Need	-
TOTAL PROJECTED NEED:	7690
Existing need due to job accessibility (50%)	8776
Existing need due to HQTAs pop. share (50%)	1794
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	5294
TOTAL EXISTING NEED	15864
TOTAL RHNA FOR IRVINE CITY	23554
Very-low income (<50% of AMI)	6379
Low income (50-80% of AMI)	4225
Moderate income (80-120% of AMI)	4299
Above moderate income (>120% of AMI)	8651

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 43,855 living within HQTAs, the City of Irvine represents 0.43% of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Irvine’s median TAZ, it will be possible to reach 17.45% of the region’s jobs in 2045 within a 30-minute automobile commute (1,754,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 5,294 units assigned to the City of Irvine.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF LA MIRADA

Hearing Date: January 8, 2021

The City of La Mirada has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

Attachment: Determination Regarding Appeal from the City of La Mirada (Final Determination of Appeals Decisions)

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures ("Appeals Procedures") on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG's website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction's share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of La Mirada submits an appeal and requests a RHNA reduction of an unspecified number of units (of its draft allocation of 1,957 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA - the Final RHNA Methodology is unrealistic and inconsistent with their housing projection and requests an alternative methodology be adopted.
2. Sewer or water infrastructure constraints for additional development - existing infrastructure is unable to support the water and wastewater requirements for their RHNA allocation.
3. Availability of land suitable for urban development or for conversion to residential use - City is fully developed and unable to accommodate the RHNA allocation without elimination of other uses or infill development, which would be inconsistent with the City's General Plan and zoning densities.
4. Lands protected from urban development under existing federal or state programs - the only existing sources of open space in the city include the County owned parkland and recreation areas that are not under City control.
5. Housing needs generated by the presence of a university campus within a jurisdiction - housing at Biola University was not considered.

A. Appeal Board Hearing and Review

The City's appeal was heard by the RHNA Appeals Board on January 8, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to

the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph010821fullagn.pdf?1609455450>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

1. Regarding application of the RHNA methodology, an appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself, and alternative methodologies cannot be considered as a basis for an appeal. Additionally, no evidence of inconsistent household growth projections was provided.
2. Regarding sewer or water infrastructure constraints, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction in the RHNA allocation, and evidence from a utility service provider that would preclude the construction of new housing was not demonstrated.
3. Regarding availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
4. Regarding lands protected from urban development under existing federal or state programs, no evidence was provided that the jurisdiction cannot accommodate its RHNA allocation in alternate areas.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

5. Regarding housing needs generated by the presence of a university campus within a jurisdiction, no evidence was provided on how housing need is impacted by the university. The presence of a university alone is not a sufficient basis for a RHNA allocation reduction.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 8, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Karen Calderon, Associate Regional Planner,
(213) 236-1983, calderon@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of La Mirada

RECOMMENDED ACTION:

Deny the appeal filed by City of La Mirada (City) to reduce the Draft RHNA Allocation for the City.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL:

The City of La Mirada requests a reduction (without a specific number) of its RHNA allocation based on the following issues:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA - the Final RHNA Methodology is unrealistic and inconsistent with their housing projection and requests an alternative methodology be adopted.
2. Sewer or water infrastructure constraints for additional development - existing infrastructure is unable to support the water and wastewater requirements for their RHNA allocation.
3. Availability of land suitable for urban development or for conversion to residential use - City is fully developed and unable to accommodate the RHNA allocation without elimination of other uses or infill development, which would be inconsistent with the City's General Plan and zoning densities.
4. Lands protected from urban development under existing federal or state programs - the only existing sources of open space in the city include the County owned parkland and recreation areas that are not under City control.
5. Housing needs generated by the presence of a university campus within a jurisdiction - housing at Biola University was not considered.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of La Mirada (Final Determination of Appeals Decisions)

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of La Mirada's RHNA allocation. Based on Issue 1, an appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself, and alternative methodologies cannot be considered as a basis for an appeal. Additionally, no evidence of inconsistent household growth projections was provided. Based on Issue 2, costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction in the RHNA allocation and evidence from a utility service provider that would preclude the construction of new housing was not demonstrated. Issue 3 was not demonstrated to be an impediment to meeting La Mirada's RHNA allocation since the City does not consider the possibility of alternate zoning, which is required to be considered. Based on Issues 4 and 5, no evidence was provided that the jurisdiction cannot accommodate its RHNA allocation in alternate areas or how housing need is impacted by the university.

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received Draft RHNA Allocations on September 11, 2020. A summary is below.

Total RHNA for the City of La Mirada: 1,957 units

Very Low Income: 633 units
Low Income: 341 units
Moderate Income: 319 units
Above Moderate Income: 664 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of La Mirada. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.

- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2020-2029).***

The City argues the Final RHNA methodology's use of a regionally-focused, shift-share model fails to consider the City's ability to develop almost 2,000 units during the RHNA period. The methodology also did not demonstrate a nexus between existing population and the housing projection for the City of La Mirada. Specifically, the City claims its population growth has been stable and even declining in recent years. The City requests the use of an alternative RHNA methodology that reflects real demographic trends.

SCAG Staff Response: As described above and in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally-reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the RHNA methodology was found by HCD to further the five statutory objectives in large part due to its use of objective factors and as such cannot consider factors differently in one jurisdiction versus another.

An appeal citing RHNA methodology as its basis must appeal the application of the adopted methodology, not the methodology itself. An example of an improper application of the adopted methodology might be a data error which was identified by a local jurisdiction. Rather than explaining how SCAG failed to properly apply the methodology, the City simply questions the approach of the Final RHNA Methodology and suggests the use of an alternate methodology.

The City also asserts that SCAG has failed to demonstrate or provide a nexus between a realistic population and housing projection for the City and the RHNA given that the City's population growth has been relatively stable or has actually declined. Per Government Code Section 65584.04(g)(3), SCAG cannot consider stable population numbers in a jurisdiction from previous RHNA cycles as either a reduction or determination of its RHNA allocation. SCAG's Growth Forecast

is used as a basis to determine population, household, and employment growth at the regional and jurisdictional levels, and is used for the basis of Connect SoCal as well. The Growth Forecast was developed over the course of approximately two years, using a panel of experts and review from partners and local jurisdictions, which was also known as “local input.” No evidence or concerns regarding long term population loss were raised by the City during the opportunities to provide local input on household growth in the Growth Forecast. See Attachment 1, “Local Input and Development of Draft RHNA Allocation” which summarizes the extent of local engagement and review opportunities provided to local jurisdictions on the household growth forecast. Review opportunities began in October 2017. While the initial deadline for input was October 2018, additional review opportunities were provided to all local jurisdictions through June 2020.

However, forecasted growth comprises only one part of SCAG’s adopted 6th cycle RHNA methodology. The policy direction of SCAG’s Regional Council was to include “existing need” in addition to using growth forecast data to allocate RHNA. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. In contrast, the Connect SoCal Growth Forecast is an assessment of the reasonably foreseeable future pattern of growth given, among other factors, the availability of zoned capacity. 1502 units, or 77% of La Mirada’s draft RHNA allocation, come from existing need measures, namely transit accessibility and job accessibility. Specifically, as indicated in Attachment 1, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on job accessibility. From the City of La Mirada’s median TAZ, it will be possible to reach 17.05% of the region’s jobs in 2045 within a 30-minute automobile commute (1,713,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs), as shown in the Map of Job Accessibility in the City of La Mirada, attached. Thus, La Mirada is thus encouraged to look at which opportunities might exist to accommodate more housing given these regional existing need factors. The RHNA methodology itself cannot be changed through the appeals process and as such staff cannot recommend a reduction on this basis.

Issue 2: Sewer and water infrastructure constraints for additional development [Government Code Section 65584.04(e)(2)(A)].

The City argues existing infrastructure is unable to support the water and wastewater requirements. To accommodate the new infill development for the 6th RHNA Cycle, most of the City's neighborhoods would require major water and sewer upgrades. The City is unsure how this new infrastructure would be financed.

SCAG Staff Response: Government Code Section 65584(e)(2)(A) indicates that, to the extent sufficient data is available, the following opportunities/constraints should be considered in developing the RHNA methodology:

“Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.”

For Government Code Section 65584.04(e)(2)(A) to apply in this case, the jurisdiction must be precluded from providing necessary infrastructure for additional development due to supply and distribution decisions made by a sewer or water provider other than the local jurisdiction. For the water constraints mentioned by the jurisdiction, it is not evident that the respective water provider has rendered a decision that would prevent the jurisdiction from providing necessary infrastructure. Costs to upgrade and develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA Allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not penalized for not developing the assigned units. For this reason, SCAG staff does not recommend a housing need reduction based upon this planning factor.

Issue 3: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City argues La Mirada is fully developed with mostly residential uses. Adding more residential development would require elimination of commercial and industrial uses that provide jobs and revenue for the City or infill development that would be inconsistent with the City's zoning densities and require removal of existing housing. At the highest permitted development density, the City calculates a total of 70 acres would be required to meet the RHNA allocation. Therefore, the land area required to accommodate the RHNA allocation far exceeds the City's current available land supply of either vacant or underutilized land. The City maintains RHNA allocations must be consistent with the City's General Plan buildout and requests SCAG review General Plan Land Use maps to ascertain the City's carrying capacity and identify where new housing units would be placed as it has done past RHNA cycles.

SCAG Staff Response: Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th Cycle RHNA. Specifically, Government Code 65584.01(b) et seq. explicitly added measures of household overcrowding and housing cost burden to the list of factors to be considered by the California Department of Housing and Community Development (HCD) for the determination of housing need, captured in the adopted Final RHNA Methodology as “existing need”. Thus, the 6th Cycle RHNA regional housing need total of 1,341,827, as determined by HCD, consists of both “projected need,” which is intended to accommodate the growth of population and households during the 6th Cycle RHNA (2021-2029), as well as “existing need”.

Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(b), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City’s projected growth.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to determine RHNA need at the jurisdictional level. Per the adopted RHNA methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need. Ultimately, it is the jurisdiction’s responsibility to update their General Plan (including Housing Element) to accommodate for both existing and projected housing need. For this reason, SCAG staff does not recommend a reduction to its draft RHNA allocation based on this factor.

Issue 4: Lands protected from urban development under existing federal or state programs [Section 65584.04(e)(2)(C)].

The City argues the only existing sources of open space in the city include the County owned parkland and recreation areas that are not under the land use control of the City of La Mirada.

SCAG Staff Response: An appeal citing protected lands as its basis must provide evidence that its lands are protected by federal and state programs. While the jurisdiction has indicated it cannot accommodate units in County-owned areas, no evidence has been provided that the jurisdiction cannot accommodate its RHNA allocation in other areas. The presence of protected open space alone does not reduce housing need, nor does it preclude a jurisdiction from accommodating its

housing need elsewhere. For the reasons, SCAG staff does not recommend a reduction to the jurisdiction's RHNA allocation based on this factor.

Issue 5: Housing needs generated by the presence of a university campus within a jurisdiction [Section 65584.04(e)(9)].

The City argues housing characteristics unique to the City, such as student housing at Biola University, were not considered in the formulation of the City's RHNA allocation.

SCAG Staff Response: SCAG considered the housing need generated by universities at a regional level as part of the adopted Final RHNA Methodology. However, the presence of a university alone is not a sufficient basis for a RHNA allocation reduction, the City needs to demonstrate how the jurisdiction's housing need is impacted with the presence of the university. The jurisdiction provides no basis to support a reduction in their draft RHNA Allocation. For this reason, SCAG staff does not recommend a reduction in the jurisdiction's Draft RHNA Allocation based on this planning factor.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of La Mirada had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of La Mirada's Draft RHNA Allocation.

1. Local Input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.¹ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.² While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

The local input data included SCAG's preliminary growth forecast information. For the City of La Mirada, the anticipated number of households in 2020 was 14,985 and in 2030 was 15,525 (growth of 540 households). In May 2018, SCAG staff met with local jurisdiction staff to discuss the Bottom-Up Local Input and Envisioning Process and answer questions. Input was not received. The preliminary figures above were used by SCAG.

¹ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at: https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

² A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of La Mirada submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmDM.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG did not receive additional technical corrections from the City of La Mirada from which differed from the Growth Vision.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on

November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

“This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology.” (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG’s 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG’s 6th cycle RHNA methodology consists of two primary elements: “projected need” which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and “existing need,” which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region’s current population.³ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction’s total housing need which are primarily based on data from Connect SoCal’s aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

The methodology is described in further detail at: <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

³ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. “existing need”) and does not affect a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

3. Draft RHNA Allocation for the City of La Mirada

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of La Mirada received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of La Mirada as summarized in the data and calculations in the tables below.

La Mirada city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	446
Percent of households who are renting:	22%
Housing unit loss from demolition (2009-18):	1
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	1,265
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	17.05%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	1,713,000
Share of region's job accessibility (population weighted):	0.33%
Jurisdiction's HQTAs population (2045):	-
Share of region's HQTAs population (2045):	0.00%
Share of population in low/very low-resource tracts:	0.07%
Share of population in very high-resource tracts:	19.38%
Social equity adjustment:	150%

Calculation of Draft RHNA Allocation for La Mirada city	
Forecasted household (HH) growth, RHNA period:	446
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	10
Replacement Need	1
TOTAL PROJECTED NEED:	457
Existing need due to job accessibility (50%)	1372
Existing need due to HQTAs pop. share (50%)	0
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	130
TOTAL EXISTING NEED	1502
TOTAL RHNA FOR LA MIRADA CITY	1957
Very-low income (<50% of AMI)	633
Low income (50-80% of AMI)	341
Moderate income (80-120% of AMI)	319
Above moderate income (>120% of AMI)	664

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas

and population forecasts. With no forecasted population living within HQTAs in 2045, the City of La Mirada represents zero percent of the SCAG region's HQTA population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region's workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal's travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction's median TAZ is used as to allocate housing units based on transit accessibility. From the City of La Mirada's median TAZ, it will be possible to reach 17.05% of the region's jobs in 2045 within a 30-minute automobile commute (1,713,000 jobs, based on Connect SoCal's 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 130 units assigned to the City of La Mirada.

Please note that the above represents only a partial description of key data and calculations in the RHNA methodology.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF LA PALMA

Hearing Date: January 19, 2021

The City of La Palma has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region’s greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions.” (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction’s share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction’s annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscscag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana's allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City's Appeal

The City of La Palma submits an appeal and requests a RHNA reduction of 400 units (of its draft allocation of 800 units). The grounds for appeal are as follows:

- 1) Existing or projected jobs-housing balance - the combination of institutional/educational and utility uses limits opportunities for the City to balance zoning for jobs/housing and create local employment and open space for residents.
- 2) Availability of land suitable for urban development or for conversion to residential use - the City is completely developed and any attempts to rezone for high density residential use will challenge the fiscal stability of the City.

Other: The City indicates it has no high-quality transit areas (HQTAs) at present.

A. [Appeal Board Hearing and Review](#)

The City's appeal was heard by the RHNA Appeals Board on January 19, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City's appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City's bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City's staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna->

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

[abph011921fullagn.pdf?1610770557](https://scag.ca.gov/rhna-abph011921fullagn.pdf?1610770557)). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board's Decision

Based upon SCAG's adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

- 1) Regarding jobs-housing imbalance, the job accessibility factor is defined as the jurisdiction's share of regional jobs accessible within a 30-minute drive commute. This is not a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction's residents.
- 2) Regarding lack of availability of land suitable for urban development or for conversion to residential use, the City does not provide evidence that it cannot accommodate housing using other considerations besides vacant land such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need. Furthermore, costs to develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA Allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not penalized for not developing the assigned units.

Other: Regarding HQTAs, while the City does not currently have an HQTA, the adopted Final RHNA Methodology addresses HQTAs in 2045; the map of HQTAs in 2045 shows that the southernmost tip of La Palma is within an HQTA and therefore a small number of units (33) is appropriately allocated to La Palma on this basis.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Southern California Association of Governments
Remote Participation Only
January 19, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of La Palma

RECOMMENDED ACTION:

Deny the appeal filed by the City of La Palma to reduce its Draft RHNA Allocation by 400 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of La Palma requests a reduction of its RHNA Allocation by 400 units (from 800 units to 400 units) based the following issues:

- 1) Existing or projected jobs-housing balance
- 2) Availability of land suitable for urban development or for conversion to residential use

Other: The City indicates it has no high-quality transit areas at present.

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal and recommend no change to the City of La Palma's RHNA Allocation. The City's arguments regarding their jobs-housing imbalance and lack of availability of suitable land were not demonstrated to be an impediment to meeting La Palma's RHNA Allocation since the City does not consider the possibility of allowing housing on other non-vacant land in the City. Regarding HQTAs, while the City does not currently have an HQTAs, the adopted Final RHNA Methodology addresses HQTAs in 2045; the map of HQTAs in 2045 shows that the southernmost tip of La Palma is within an HQTAs and therefore a small number of units (33) is appropriately allocated to La Palma on this basis.

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of La Palma (Final Determination of Appeals Decisions)

BACKGROUND:**Draft RHNA Allocation**

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of La Palma: 800 units
 Very Low Income: 223 units
 Low Income: 140 units
 Moderate Income: 137 units
 Above Moderate Income: 300 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of La Palma. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:

Issue 1: Existing or projected jobs-housing balance [Govt. Code § 65584.04(e)(1)].

The combination of institutional/educational and utility uses limits opportunities for the City to balance zoning for jobs/housing and create local employment and open space for residents.

SCAG Staff Response: The adopted RHNA Methodology includes a calculation of job accessibility as one of the factors to determine a jurisdiction’s Draft RHNA Allocation. Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute (additional details are found in the adopted RHNA methodology). This is **not** a measure of the number of jobs within a jurisdiction; rather, it is a measure of how many jobs can be accessed by a jurisdiction’s residents, which can include jobs outside of the jurisdiction. Over 80 percent of SCAG region workers live and work in different jurisdictions, which calls for an approach to the region’s job housing relationship through the measurement of access rather than number of jobs within a certain jurisdiction. Limiting a jobs housing balance solely within jurisdictions can effectively worsen a regional jobs housing balance and thus SCAG staff does not recommend a reduction to the jurisdiction’s Draft RHNA Allocation based on this factor.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Govt. Code § 65584.04(e)(2)(B)].

The City of La Palma claims the City is completely developed and any attempts to rezone for high density residential use will challenge the fiscal stability of the City, require the City to provide additional residential services without adequate revenue and jeopardize existing parkland and open space facilities. The City indicates that it is built-out and has not had a new housing tract built in over 20 years, but that residents are taking advantage of Accessory Dwelling Unit (ADU) opportunities, but the City is uncertain how ADUs can be applied to their RHNA Allocation.

The City indicates that 118.78 acres or 13.2% of total land within the City is comprised of institutional/educational land uses and 60 acres or 6.7% of land within the City is dedicated to Flood Control Channel/Utility zoning. Furthermore, the City of La Palma indicates that nearly all the land suitable for residential redevelopment is within a Federally designated flood hazard zone.

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG “may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality” (which includes the land use policies in its General Plan). “Available land suitable for urban development or conversion to residential use,” as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of “available” land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

“In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land.” (HCD Letter at p. 2).

As such, the City can and must consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City's projected growth.

Note that while zoning and capacity analysis is used to meet RHNA need, they should not be used to allocate RHNA need. Per the adopted RHNA Methodology, RHNA need at the jurisdictional level is determined by projected household growth, transit access, and job access. Housing need, both existing and projected need, is independent of zoning and other related land use restrictions, and in some cases is exacerbated by these very same restrictions. Thus, land use capacity that is restricted by factors unrelated to existing or projected housing need cannot determine existing or projected housing need.

While the City asserts that it is built out and has no land available for development, it does not provide evidence that it is unable to consider underutilization of these sites, increased densities, and other planning tools to accommodate its assigned need. Furthermore, on June 10, 2020, HCD released extensive guidelines for housing element site inventories.¹ A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs).² Specifically, the guidelines indicate that (page 32):

“In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance.”

Furthermore, costs to develop appropriate infrastructure cannot be considered by SCAG as a justification for a reduction since the RHNA Allocation is not a building quota. Rather, a jurisdiction is required to plan and zone for housing need and is not penalized for not developing the assigned units.

With respect to the lands in a Federally designated flood zone, per Government Code 65584.04(e)(2)(B), “the determination of land available suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.” While SCAG staff does not dispute that

¹ See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf.

² See also, Accessory Dwelling Unit Handbook, HCD, September 2020, at p. 18 (“Pursuant to Gov. Code § 65852.2 subd. (m) and Government Code section 65583.1, ADUs and JADUs may be utilized towards the Regional Housing Need Allocation (RHNA) and Annual Progress Report (APR) pursuant to Government Code Section 65400.”) at <https://www.hcd.ca.gov/policy-research/docs/adu-ta-handbook-final.pdf>.

there may be areas at risk of flooding in the jurisdiction, the jurisdiction has not provided evidence that an agency or organization such as FEMA has determined that flood management infrastructure is inadequate to avoid flood risk in these areas and that the City is completely prohibited by FEMA's decision from accommodating housing need in these areas.

It is presumed that planning factors such as institutional uses and flood hazard zones have already been accounted for prior to the local input submitted to SCAG since such factors are required to be considered at the local level. No evidence was submitted that these areas have changed since the most current input provided in during the RHNA Methodology planning factor survey conducted in Spring 2019.

For these reasons, SCAG staff does not recommend a reduction to the jurisdiction's Draft RHNA Allocation.

Other: HQTAs.

The City of La Palma notes that it has no major transit stops, no high-quality transit corridors and no transit priority areas within the city boundaries.

SCAG Staff Response: The adopted Final RHNA Methodology includes a component that calculates need based on a jurisdiction's population within high-quality transit areas (HQTAs) in 2045 in Connect SoCal, SCAG's 2045 RTP/SCS. While the City does not currently have an HQTAs, the adopted Final RHNA Methodology addresses HQTAs in 2045; the map of HQTAs in 2045 (see attached map) shows that the southernmost tip of La Palma is within an HQTAs and therefore a small number of units (33) is appropriately allocated to La Palma on this basis. Specifically, OCTA proposes a La Palma/Lincoln Rapid Bus via OCTA Transit Vision with morning and evening headways of 10 minutes. The line is estimated for completion in 2026.

For planning and SCS purposes, SCAG identifies a "high quality transit area" as generally a walkable transit village or corridor that is within one-half mile of a major transit stop or High-Quality Transit Corridor (HQTAs) as defined in Government Code 21155(b) and 21064.3 excluding freeway transit corridors with no bus stops on the freeway alignment. SCAG's technical methodology for identifying HQTAs and major transit stops is based on input from the Regional Transit Technical Advisory Committee (RTTAC), as well as consultation with local agencies, other large MPOs in California, and the Governor's Office of Planning and Research.

Planned HQTAs and major transit stops are future improvements that are expected to be implemented by transit agencies by the RTP/SCS horizon year of 2045. These are assumed by definition to meet the statutory requirements of an HQTAs or major transit stop. SCAG updates its inventory of planned major transit stops and HQTAs with the adoption of a new RTP/SCS, once

every four years. However, transit planning studies may be completed by transit agencies on a more frequent basis than the RTP/SCS is updated by SCAG and as such it is understood that planned transit projects are subject to further project-specific evaluation, but that is the nature of the long-range planning process.

While there is an inherent chance that transit agencies may change future plans, ultimately SCAG's adopted Final RHNA Methodology uses this definition of 2045 HQTAs in order to better align future housing with anticipated future transit rather than focusing on only what exists today. For this reason, SCAG staff does not recommend a decrease on the City's RHNA Allocation based on this factor.

The attached map shows the 2045 HQTAs boundaries for the City of La Palma which were used in Connect SoCal.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of La Palma had to provide information and local input on SCAG’s growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of La Palma’s Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.³ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁴ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG’s growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of La Palma, the anticipated number of households in 2020 was 5,108 and in 2030 was 5,115 (growth of 7 households). In March 2018, SCAG staff and CDR staff met with staff

³ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁴ A detailed list of data during this process reviewed can be found in each jurisdiction’s Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

from the City of La Palma to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of La Palma submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning Process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas (GHG) emissions from automobiles and light trucks to achieve Southern California's GHG reduction targets, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmmdm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of La Palma and incorporated them into the Growth Vision in December 2019.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

- (1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.*
- (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.*
- (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.*
- (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.*
- (5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)*

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and

public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology, which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need", which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁵ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQTA) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)
- Job accessibility in 2045 (existing need)

⁵ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of La Palma

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120-day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of La Palma received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of La Palma as summarized in the data and calculations in the tables below.

La Palma city statistics and inputs:		Calculation of Draft RHNA Allocation for La Palma city	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	6	Forecasted household (HH) growth, RHNA period:	6
Percent of households who are renting:	32%	Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	0
Housing unit loss from demolition (2009-18):	-	Replacement Need	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	22	TOTAL PROJECTED NEED:	6
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	20.09%	Existing need due to job accessibility (50%)	496
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10,049M jobs)</i>	2,019,000	Existing need due to HQTAs pop. share (50%)	33
Share of region's job accessibility (population weighted):	0.12%	Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	265
Jurisdiction's HQTAs population (2045):	799	TOTAL EXISTING NEED	794
Share of region's HQTAs population (2045):	0.01%	TOTAL RHNA FOR LA PALMA CITY	800
Share of population in low/very low-resource tracts:	0.00%	Very-low income (<50% of AMI)	223
Share of population in very high-resource tracts:	0.11%	Low income (50-80% of AMI)	140
Social equity adjustment:	150%	Moderate income (80-120% of AMI)	137
		Above moderate income (>120% of AMI)	300

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal's designation of HQTAs and population forecasts. With a forecasted 2045 population of 799 living within HQTAs, the City of La Palma represents 0.01% of the SCAG region's HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on job accessibility. From the City of La Palma’s median TAZ, it will be possible to reach 20.09% of the region’s jobs in 2045 within a 30-minute automobile commute (2,019,000 jobs), based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs.

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as “residual need”, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 265 units assigned to the City of La Palma.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF LAGUNA BEACH

Hearing Date: January 22, 2021

The City of Laguna Beach has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

- (1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.
- (2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

⁵ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-objection-letter-rhna-regional-determination.pdf?1602190274>

⁶ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-scag-rhna-final-determination-101519.pdf?1602190258>

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸

Following the adoption of the Final RHNA Methodology, the Regional Council decided to delay full adoption of Connect SoCal for 120 days in order to assess the impacts of the COVID-19 pandemic on the Connect SoCal growth forecast. SCAG adopted Connect SoCal on September 3, 2020, including its growth forecast. SCAG released its Draft RHNA allocations to local jurisdictions on or about September 11, 2020.

⁷ See <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>

⁸ See <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>

III. The Appeal Process

The Regional Council adopted the 6th Cycle Appeals Procedures (“Appeals Procedures”) on May 7, 2020 (updated September 3, 2020).⁹ The Appeals Procedures sets forth existing law and the procedures and bases for an appeal. The Appeals Procedure was provided to all jurisdictions and posted on SCAG’s website. Consistent with the RHNA statute, the Appeals Procedures sets forth three grounds for appeal:

1. Methodology – That SCAG failed to determine the jurisdiction’s share of the regional housing need in accordance with the information described in the Final RHNA Methodology established and approved by SCAG, and in a manner that furthers, and does not undermine the five objectives listed in Government Code Section 65584(d);
2. Local Planning Factors and Information Affirmatively Furthering Fair Housing (AFFH)¹⁰ – That SCAG failed to consider information submitted by the local jurisdiction relating to certain local factors outlined in Govt. Code § 65584.04(e) and information submitted by the local jurisdiction relating to affirmatively furthering fair housing pursuant to Government Code § 65584.04(b)(2) and 65584(d)(5); and
3. Changed Circumstances – That a significant and unforeseen change in circumstance has occurred in the jurisdiction after April 30, 2019 and merits a revision of the information previously submitted by the local jurisdiction. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred. (Appeals Procedure at pp. 2-4).

The Regional Council delegated authority to the RHNA Subcommittee to review and to make final decisions on RHNA revision requests and appeals pursuant to the RHNA Subcommittee Charter, which was approved by the Regional Council on February 7, 2019. As such, the RHNA Subcommittee has been designated the RHNA Appeals Board. The RHNA Appeals Board is comprised of six (6) members and six (6) alternates, each representing one of the six (6) counties in the SCAG region, and each county is entitled to one vote.

The period to file appeals commenced on September 11, 2020. Local jurisdictions were permitted to file revision requests until October 26, 2020. SCAG posted all appeals on its website at: <https://scag.ca.gov/rhna-appeals-filed>. Fifty-two (52) timely appeals were filed; however, two jurisdictions (West Hollywood and Calipatria) withdrew their appeals. Four jurisdictions (Irvine, Yorba

⁹ See <https://scag.ca.gov/sites/main/files/file-attachments/rhna-adopted-appeals-procedures090320.pdf?1602188788>

¹⁰ In addition to the local planning factors set forth in Section 65584.04(e), AFFH information was included in the survey to facilitate development of the RHNA methodology pursuant to Section 65584.04(b).

Linda, Garden Grove, and Newport Beach) filed appeals of their own allocations as well as appeals of the City of Santa Ana’s allocation. Pursuant to Section 65584.05(c), HCD and several local jurisdictions submitted comments on one or more appeals by December 10, 2020.

The public hearing for the appeals occurred over the course of several weeks on January 6, 8, 11, 13, 15, 19, 22, and 25, 2021. Public comments received during the RHNA process were continually logged and posted on the SCAG website at <https://scag.ca.gov/rhna-comments>.

IV. The City’s Appeal

The City of Laguna Beach submits an appeal and requests a RHNA reduction of 278 units (of its draft allocation of 393 units). The grounds for appeal are as follows:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029) – the City requests reassessment of the existing housing needs for “certain disadvantaged communities” since “they have the capacity and need to absorb units that were redistributed to other cities as net residual factor.”
2. Availability of land suitable for urban development or for conversion to residential use – the City has lands constraints such as steep hillside terrain, narrow vehicle/emergency access roads, fire hazard designations, and limitations to development based on dedicated open space land protected by federal and State programs.
3. Lands protected from urban development under existing federal or state programs – the City has limitations to development based on significant dedicated open space land that is protected by federal and State programs.
4. High housing cost burdens - high land values make the construction of affordable housing less feasible than in other jurisdictions. Moreover, topographical and geographical conditions, along with additional fire protection costs, contributes to the high cost of construction.
5. Changed circumstances - since the RHNA allocation was initially established, there is evidence of an increased risk of wildfire due to climate change.

A. Appeal Board Hearing and Review

The City’s appeal was heard by the RHNA Appeals Board on January 22, 2021, at a noticed public hearing. The City, HCD, other local jurisdictions, and the public were afforded an opportunity to submit comments related to the appeal, and SCAG staff presented its recommendation to the Appeals Board. SCAG staff prepared a report in response to the City’s appeal. That report provided the background for the draft RHNA allocation to the City and assessed the City’s bases for appeal. The Appeals Board considered the staff report along with the submitted documents, testimony of those providing

comments prior to the close of the hearing and comments made by SCAG staff prior to the close of the hearing, which are incorporated herein by reference. The City’s staff report including Attachment 1 to the report is attached hereto as Exhibit A¹¹ (other attachments to the staff report may be found in the agenda materials at <https://scag.ca.gov/sites/main/files/file-attachments/rhna-abph012221fullagn.pdf?1610771065>). Video of each hearing is available at: <https://scag.ca.gov/rhna-subcommittee>.

B. Appeals Board’s Decision

Based upon SCAG’s adoption of the Final RHNA Methodology and the Connect SoCal growth forecast, the RHNA Appeals Procedure and the process that led thereto, all testimony and all documents and comments submitted by the City, HCD, other local jurisdictions, and the public prior to the close of the hearing, and the SCAG staff report, the RHNA Appeals Board hereby denies the appeal on the bases set forth in the staff report which are summarized as follows:

1. Regarding application of the adopted Final RHNA Methodology, no evidence was provided to support an incorrect application of the adopted RHNA methodology and while the City requests it, SCAG cannot use the 5th RHNA cycle methodology for the current cycle.
2. Regarding availability of land, the City does not provide evidence that it cannot accommodate housing in other unconstrained areas using other considerations such as underutilized land, opportunities for infill development, and increased residential densities to accommodate need.
3. Regarding lands protected from urban development under existing federal or state programs, the City has not provided evidence that there is insufficient land to accommodate its RHNA allocation.
4. Regarding high housing cost burdens, construction costs cannot be considered by SCAG as a justification for a reduction since the purpose of a RHNA allocation is to ensure that there is adequate zoning to accommodate housing need.

¹¹ Note that since the staff reports were published in the agenda packets, SCAG updated its website, and therefore, weblinks in the attached staff report and Attachment 1 have also been updated.

5. Regarding change in circumstance - impacts as a result of increased risk of wildfire - the City provides no evidence that this is an unforeseen change that would significantly change the recent survey input.

V. Conclusion

For the foregoing reasons and based on the full record before the RHNA Appeals Board at the close of the public hearing (which the Board has taken into consideration in rendering its decision and conclusion), the RHNA Appeals Board hereby denies the City's appeal and finds that the City's RHNA allocation is consistent with the RHNA statute pursuant to Section 65584.05 (e)(1) as it was developed using SCAG's Final RHNA Methodology which was found by HCD to further the objectives set forth in Section 65584(d).

Reviewed and approved by RHNA Appeals Board this 16th day of February 2021.

Southern California Association of Governments
Remote Participation Only
January 22, 2021

To: Regional Housing Needs Assessment Subcommittee (RHNA)

EXECUTIVE DIRECTOR'S
APPROVAL

From: Ma'Ayn Johnson, Regional Planner Specialist,
(213) 236-1975, johnson@scag.ca.gov

Subject: Appeal of the Draft RHNA Allocation for the City of Laguna Beach

RECOMMENDED ACTION:

Deny the appeal filed by the City of Laguna Beach to reduce the draft RHNA allocation for the City of Laguna Beach by 278 units.

STRATEGIC PLAN:

This item supports the following Strategic Plan Goal 2: Advance Southern California's policy interests and planning priorities through regional, statewide, and national engagement and advocacy.

SUMMARY OF APPEAL(S):

The City of Laguna Beach requests a reduction of its RHNA allocation for 278 units (from 393 units to 115 units) based on the following issues:

1. Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021 – 2029)
2. Availability of land suitable for urban development or for conversion to residential use
3. Lands protected from urban development under existing federal or state programs
4. High housing cost burdens
5. Changed circumstances

RATIONALE FOR STAFF RECOMMENDATION:

Staff have reviewed the appeal(s) and recommend no change to the City of Laguna Beach's RHNA allocation. Regarding issue 1, no evidence was provided to support an incorrect application of the adopted RHNA methodology and while the City requests it, SCAG cannot use the 5th RHNA cycle methodology for the current cycle. Regarding Issue 2, the availability of land was not demonstrated to be an impediment to meeting the City's RHNA allocation since it does not provide evidence that it cannot accommodate housing on other areas in the jurisdiction. Regarding Issue 3, the City has not provided evidence that there is insufficient land to accommodate its RHNA allocation. In regard

OUR MISSION

To foster innovative regional solutions that improve the lives of Southern Californians through inclusive collaboration, visionary planning, regional advocacy, information sharing, and promoting best practices.

OUR VISION

Southern California's Catalyst for a Brighter Future

OUR CORE VALUES

Be Open | Lead by Example | Make an Impact | Be Courageous

Attachment: Determination Regarding Appeal from the City of Laguna Beach (Final Determination of Appeals Decisions)

to Issue 5, change in circumstance impacts as a result of increased risk of wildfire, the City provides no evidence that this is an unforeseen change that would significantly change the recent survey input.

BACKGROUND:

Draft RHNA Allocation

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the adoption of Connect SoCal on September 3, 2020, all local jurisdictions received draft RHNA allocations on September 11, 2020. A summary is below.

Total RHNA for the City of Laguna Beach: 393 units
 Very Low Income: 117 units
 Low Income: 80 units
 Moderate Income: 79 units
 Above Moderate Income: 117 units

Additional background related to the Draft RHNA Allocation is included in Attachment 1.

Summary of Comments Received during 45-day Comment Period

No comments were received from local jurisdictions or HCD during the 45-day public comment period described in Government Code section 65584.05(c) which specifically regard the appeal filed for the City of Laguna Beach. Three comments were received which relate to appeals filed generally:

- HCD submitted a comment on December 10, 2020 delineating the statutory basis for RHNA appeals and the requirement that any appeals granted must include written findings regarding how revisions are necessary to further RHNA's statutory objectives.
- The City of Whittier submitted a comment on December 10, 2020 supporting surrounding cities in their appeals, but expressing concern that additional units may be applied to Whittier if reallocated from cities which are successful in their appeals.
- The City of Long Beach submitted a comment on December 3, 2020 indicating their view that the RHNA allocation process was fair and transparent, their support for evaluating appeals on their merits (specifically those from the Gateway Council of Governments), and their opposition to any action which would result in a transfer of additional units to Long Beach.

ANALYSIS:***Issue 1: Application of the adopted Final RHNA Methodology for the 6th Cycle RHNA (2021-2029) [Government Code Section 65584.05 (b)(2)].***

The City indicates that it is appealing its draft RHNA allocation based on their assertion that “certain cities with disadvantaged communities in the SCAG region have underreported their existing housing needs as established in their general plans.” The City argues that this has led to a lower RHNA allocation for those cities while disproportionately increasing the RHNA allocation for other cities. They assert that there is a need for reassessment of the existing housing needs for “certain disadvantaged communities” since “they have the capacity and need to absorb units that were redistributed to other cities as net residual factor.”

Additionally, the City argues that HCD overestimated the regional determination given to SCAG and refer to a report published by Freddie Mac. Based on this overestimation, the City argues that a reduction of 153 units should be granted.

SCAG Staff Response: As described above and in Attachment 1: Local Input and Development of Draft RHNA Allocation, the Final RHNA Methodology was adopted by the Regional Council on March 5, 2020 and describes the various policy factors whereby housing unit need is to be allocated across the region—for example, anticipated growth, access to jobs and transit, and vacancy. The methodology makes extensive use of locally-reviewed input data and describes data sources and how they are calculated in detail. On January 13, 2020, the RHNA methodology was found by HCD to further the five statutory objectives¹ in large part due to its use of objective factors and as such cannot consider factors differently in one jurisdiction versus another. The basis for an appeal for this factor is the *application* of the RHNA methodology and not the RHNA methodology itself, which was a separate but extensive process that involved multiple steps and public involvement leading up to final adoption. Once adopted, the RHNA methodology was applied consistently to all SCAG jurisdictions and no evidence has been provided that there was an exception to determine the draft RHNA allocation for the City of Laguna Beach.

¹ The objectives are: 1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low-income households. (2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080. (3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction. (4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey. (5) Affirmatively furthering fair housing. (Govt. Code § 65584(d).)

With respect to the HCD's regional determination, SCAG's final regional determination of approximately 1.34 million units was issued by HCD on October 15, 2019 per state housing law. The City suggests that HCD overestimated this regional determination based on a recent report by Freddie Mac. In February 2020 national home lending agency Freddie Mac's Economic & Housing Research group prepared a national analysis of housing supply shortages titled "The Housing Supply Shortage: State of the States" (the Freddie Mac report). This information cannot now be considered for adjusting HCD's regional housing needs determination. Furthermore, the RHNA Appeals Board has no authority to change the regional determination. The RHNA statute outlines a very specific process for arriving at a regional housing needs determination for RHNA. It also prescribes a specific timeline which necessitated the completion of the regional determination step by fall 2019 in order to allow enough time for the development of a methodology, appeals, and local housing element updates.

The defined timeframes are guided by the deadline for the housing element revisions for HCD's RHNA determination and SCAG's Final RHNA Allocation Plan. HCD, in consultation with each council of governments (COG), shall determine each region's existing and projected housing need pursuant to Section 65584.01 at least two years prior to the scheduled revision required pursuant to Section 65588. Govt. Code § 65584(b). This "determination shall be based upon population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments." Govt. Code § 65584.01(b). HCD begins the process 26 months prior to the scheduled revision so the data HCD relies on is the available provided by the COGs at that time. Similarly, the COG issues its survey for information to develop the RHNA allocation methodology up to 30 months prior to the scheduled revision. By necessity, the data used for these processes is data available at that time.

Without assessing the merits of the report, because the Freddie Mac report was not available during at the time HCD was determining regional housing need, it could not be considered then; and it cannot be considered now that the regional housing need has been determined. Furthermore, the Freddie Mac report is regional in nature and does not provide information on individual jurisdictions. For an appeal to be granted on the incorrect application of RHNA methodology, arguments and evidence must be provided that demonstrate the methodology was applied incorrectly to determine the jurisdiction's share of regional housing need. Because a regional study does not meet this criterion, these studies cannot be used to justify a particular jurisdiction's appeal. Moreover, any reduction would have to be redistributed to the region when in theory, all jurisdictions would be impacted by the regional study.

It would be untenable to reopen the process anytime new data or materials become available, particularly when there is a codified process. If so, there would be no finality to the process and local government could not meet the deadlines for their housing element updates. Procedurally, SCAG cannot consider a regional study outside of the regional determination process nor should it apply a regional study to reduce an individual jurisdiction's draft RHNA allocation.

For these reasons, SCAG staff does not recommend a reduction to the City's draft RHNA allocation based on the application of the adopted RHNA methodology.

Issue 2: Availability of land suitable for urban development or for conversion to residential use [Government Code Section 65584.04(e)(2)(B)].

The City of Laguna Beach indicates in its appeal that it has a number of planning constraints that would impact its ability to accommodate its draft RHNA allocation. The constraints listed include steep hillside terrain, narrow vehicle/emergency access roads, fire hazard designations for most of the City, and limitations to development based on dedicated open space land protected by federal and State programs. It also indicates that many of the City's vacant parcels cannot be provided safe access. The appeal argues that only half of the City's land area is buildable, "most of which is already developed."

SCAG Staff Response: Pursuant to Government Code Section 65584.04(e)(2)(B), SCAG "may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality" (which includes the land use policies in its General Plan). "Available land suitable for urban development or conversion to residential use," as expressed in 65584.04(e)(2)(B), is not restricted to vacant sites; rather, it specifically indicates that underutilized land, opportunities for infill development, and increased residential densities are a component of "available" land. As indicated by HCD in its December 10, 2020 comment letter (HCD Letter):

"In simple terms, this means housing planning cannot be limited to vacant land, and even communities that view themselves as built out must plan for housing through means such as rezoning commercial areas as mixed-use areas and upzoning non-vacant land." (HCD Letter at p. 2).

Furthermore, on June 10, 2020, HCD released extensive guidelines for housing element site inventories.² A wide range of adequate sites are detailed including accessory dwelling units (ADUs) and junior accessory dwelling units (JADUs).³ Specifically, the guidelines indicate that (page 32):

"In consultation with HCD, other alternatives may be considered such as motel conversions, adaptive reuse of existing buildings, or legalization of units not previously reported to the Department of Finance."

² See https://www.hcd.ca.gov/community-development/housing-element/docs/sites_inventory_memo_final06102020.pdf

³ See also Accessory Dwelling Unit Handbook, HCD, September 2020 at <https://www.hcd.ca.gov/policy-research/docs/adu-ta-handbook-final.pdf>

As such, the City can and must consider other opportunities for development. This includes the availability of underutilized land, opportunities for infill development and increased residential densities, or alternative zoning and density. Alternative development opportunities should be explored further and could possibly provide the land needed to zone for the City's projected growth.

While the City indicates that only half of its land is buildable, it does not provide evidence that it is unable to consider underutilization of these buildable sites, increased densities, and other planning tools to accommodate its assigned need. Again, SCAG is prohibited from limiting the consideration of suitable sites due to the City's land use restrictions and is required to review alternative methods to meet housing need, neither of which is provided in the appeal application. For this reason, SCAG staff does not recommend a reduction to the City of Laguna Beach's draft RHNA allocation based on this factor.

Issue 3: Lands Protected from Urban Development under Existing Federal or State Programs
[Government Code Section 65584.04(2)(C).

In its appeal, the City indicates that it has limitations to development based on significant dedicated open space land that is protected by federal and State programs. No documentation or other evidence is provided to support this assertion.

SCAG Staff Response: It is presumed that planning factors such as lands protected by federal and state programs have already been accounted for prior to the local input submitted to SCAG since such factors are required to be considered at the local level. No evidence was provided in the City's appeal that the status of these areas has changed since the most recent local input was provided in October 2018.

In addition, while the City has indicated that it is unable to accommodate residential development in these specific areas, no evidence has been provided to demonstrate that Laguna Beach is not able to accommodate its RHNA allocation in other areas or through the use of other land use strategies or policies. The presence of protected open space alone does not reduce housing need nor does it preclude a jurisdiction from accommodating its housing need elsewhere.

While SCAG staff acknowledges that the City has dedicated open space land that is protected by federal and State programs, it is unclear how the presence of these protected lands precludes the City from accommodating its housing need. To preserve its dedicated open space, SCAG encourages the jurisdiction to consider available land, increased densities, and other alternative zoning tools in non-open space areas to accommodate its RHNA allocation (see also Response to Issue 2 above). For these reasons, SCAG staff does not recommend a reduction to its draft RHNA allocation based on this factor.

Issue 4: High Housing Cost Burdens [Government Code 65584.04].

The City states in its appeal that its high land values make the construction of affordable housing less feasible than in other jurisdictions. Moreover, it argues its topographical and geographical conditions, along with additional fire protection costs, contributes to the high cost of construction.

SCAG staff response:

Construction costs cannot be considered by SCAG as a justification for a reduction since the purpose of a RHNA allocation is to ensure that there is adequate zoning to accommodate housing need. This full text of this section: “The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent” refers to the proportion of renter households who are considered cost-burdened for housing. It does not refer to the cost of construction. For this reason, SCAG staff does not recommend a reduction to the City’s draft RHNA allocation based on this factor.

Issue 5: Changed Circumstances [Government Code 65584.05(b)]

The City indicates in its appeal that since the RHNA allocation was initially established, there is evidence of an increased risk of wildfire due to climate change. It argues that this increased risk is a change in circumstance that warrants a reduction to its draft RHNA allocation.

SCAG Staff Response: State law requires that a change in circumstance be significant and unforeseen and that it would merit a change to local planning factors and conditions since jurisdictions were last surveyed on these factors (approximately Spring 2019). Section 65584.05(b) requires that:

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584.”

In its appeal, while the City asserts it has fire hazards, it does not provide evidence that this is an unforeseen circumstance. In fact, as part of its submitted appeal evidence the City includes an impaired road access map from its Safety Element of its General Plan, which was adopted in 1995. The City’s published Safety Element has extensive information regarding fire threats and hazards in certain areas of the City, including 257 instances of the word “fire.” Because this factor would not appear to be unforeseen and no evidence has been provided that it is significant enough to change recent survey input from the City, a reduction to the City’s draft RHNA allocation is not recommended.

FISCAL IMPACT:

Work associated with this item is included in the current FY20-21 Overall Work Program (300-4872Y0.02: Regional Housing Needs Assessment).

ATTACHMENT(S):

1. Local Input and Development of Draft RHNA Allocation (City of Laguna Beach)
2. Appeal Form and Supporting Documentation (City of Laguna Beach)
3. Comments Received During the Comment Period (General)

Attachment 1: Local Input and Development of the Draft RHNA Allocation

This attachment sets forth the nature and timing of the opportunities which the City of Laguna Beach had to provide information and local input on SCAG's growth forecast, the RHNA methodology, and the Growth Vision of the 2020 Regional Transportation Plan/Sustainable Communities Strategy (RTP/SCS or Connect SoCal). It also describes how the RHNA Methodology development process integrates this information in order to develop the City of Laguna Beach's Draft RHNA Allocation.

1. Local input

a. Bottom-Up Local Input and Envisioning Process

On October 31, 2017, SCAG took the first step toward developing draft RHNA allocations by initiating the Bottom-Up Local Input and Envisioning Process. At the direction of the Regional Council, the objective of this process was to seek local input and data to prepare for Connect SoCal and the 6th cycle of RHNA.⁴ Each jurisdiction was provided with a package of land use, transportation, environmental, and growth forecast data for review and revision which was due on October 1, 2018.⁵ While the local input process materials focus principally on jurisdiction-level and Transportation Analysis Zone (TAZ) level growth, input on specific parcels, sites, and project areas were welcomed and integrated into SCAG's growth forecast as well as data on other elements. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG's Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process. For the City of Laguna Beach, the anticipated number of households in 2020 was 10,949 and in 2030 was 10,970 (growth of 21 households). In March 2018, SCAG staff and CDR staff met

⁴ While the RTP/SCS and RHNA share data elements, they are distinct processes. The RTP/SCS growth forecast provides an assessment of reasonably foreseeable future patterns of employment, population, and household growth in the region given demographic and economic trends, and existing local and regional policy priorities. The RHNA identifies anticipated housing need over a specified eight-year period and requires that local jurisdictions make available sufficient zoned capacity to accommodate this need. A further discussion of the relationship between these processes can be found in Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903fconnectsocial_public-participation-appendix-2.pdf?1606001847.

⁵ A detailed list of data during this process reviewed can be found in each jurisdiction's Draft Data/Map Book at <https://scag.ca.gov/local-input-process-towns-cities-and-counties>.

with staff from the City of Laguna Beach to discuss the Bottom-Up Local Input and Envisioning Process and answer questions.

b. RHNA Methodology Surveys

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the AB2158 factor survey), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions' Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology. The City of Laguna Beach submitted the following surveys prior to the adoption of the draft RHNA methodology:

- Local planning factor survey
- Affirmatively Furthering Fair Housing (AFFH) survey
- Replacement need survey
- No survey was submitted to SCAG

c. Connect SoCal Growth Vision and Additional Refinements

Beginning in May 2018, SCAG's Sustainable Communities Working Group began the process of developing growth scenarios for the SCAG region. The culmination of this work was the development of the Connect SoCal Growth Vision, which directly uses jurisdictional-level growth projections from the Bottom-Up Local Input and Envisioning process, and also features strategies for growth at the TAZ-level that help to reduce greenhouse gas emissions (GHG) from automobiles and light trucks to achieve Southern California's GHG reduction target, approved by the California Air Resources Board (CARB) in accordance with state planning law. Additional detail regarding the Connect SoCal Growth Vision, specifically the Transportation Analysis Zone (TAZ, or neighborhood) level projections is found at <https://scag.ca.gov/sites/main/files/file-attachments/growth-vision-methodology.pdf?1603148961>.

As a result of these strategies, in some jurisdictions growth at the TAZ-level differed from locally anticipated growth conveyed during the Bottom-Up Local Input and Envisioning Process.

As such, SCAG provided two additional opportunities for all local jurisdictions to make TAZ-level technical refinements on the topics of general plan capacities and entitlements. During the release of the draft Connect SoCal Plan, jurisdictions were notified on October 31, 2019 that SCAG would accept additional refinements until December 11, 2019. Following the Regional Council's decision to delay full adoption of Connect SoCal for 120 days due to the COVID-19 pandemic, all jurisdictions were again notified on May 26, 2020 that SCAG would accept additional refinements until June 9, 2020.

Connect SoCal Growth Vision data have been available to local jurisdiction staff during the entirety of this process through SCAG's Scenario Planning Model Data Management Site (SPM-DM) at <http://spmdm.scag.ca.gov> and updates were shared with local jurisdictions on technical refinements to the data in February 2020 and August 2020 to share the results of both review opportunities. SCAG received additional technical corrections from the City of Laguna Beach and incorporated them into the Growth Vision in December 2019. The City of Laguna Beach's TAZ-level data utilized in the Connect SoCal Growth Vision matches input provided during the Bottom-Up Local Input and Envisioning Process.

2. Development of the Final RHNA Methodology

SCAG convened the first meeting of the RHNA Subcommittee in October 2018. In their subsequent monthly meetings, this body reviewed and advised on the development of SCAG's 6th cycle RHNA process, including the development of the RHNA methodology. Per Government Code 65584.04(a), SCAG must develop a RHNA methodology which furthers the five statutory objectives of RHNA:

(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region's greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing. (Govt. Code § 65584(d)).

As explained in more detail below, the Draft RHNA Methodology (which was adopted as the Final RHNA Methodology) set forth the policy factors, data sources, and calculations which would be used to generate draft RHNA allocations for all local jurisdictions. Following extensive debate and public comment, SCAG's Regional Council voted to approve the Draft RHNA Methodology on November 7, 2019 and provide it to HCD for review. Per Government Code 65584.04(i), HCD is vested with the authority to determine whether a methodology furthers the objectives set forth in Government Code section 65584(d). On January 13, 2020, HCD found that the Draft RHNA Methodology furthers these five statutory objectives of RHNA. Specifically, HCD noted that:

"This methodology generally distributes more RHNA, particularly lower income RHNA, near jobs, transit, and resources linked to long term improvements of life outcomes. In particular, HCD applauds the use of the objective factors specifically linked the statutory objectives in the existing need methodology." (Letter from HCD to SCAG dated January 13, 2020 at <https://scag.ca.gov/sites/main/files/file-attachments/hcd-review-rc-approved-draft-rhna-methodology.pdf?1602190239>).

On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology. Unlike SCAG's 5th cycle RHNA methodology which relies almost entirely on the household growth component of the RTP/SCS, SCAG's 6th cycle RHNA methodology consists of two primary elements: "projected need" which includes the number of housing units required to accommodate anticipated population growth over the 8-year RHNA planning period and "existing need," which refers to the number of housing units required to accommodate excess or unsatisfied housing demand experienced by the region's current population.⁶ Furthermore, the Final RHNA methodology utilizes measures of 2045 job accessibility and High Quality Transit Area (HQT) population measures based on TAZ-level projections in the Connect SoCal Growth Vision.

More specifically, the Final RHNA Methodology considers three primary factors in determining a local jurisdiction's total housing need which are primarily based on data from Connect SoCal's aforementioned Bottom-Up Local Input and Envisioning Process:

- Forecasted growth over 2020-2030 (projected need)
- Transit accessibility in 2045 (existing need)

⁶ Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These new measures are not included in the Connect SoCal Growth Forecast because they are not direct inputs to the growth forecasting process and are independent of employment and population projections. In contrast, they reflect additional latent housing needs in the current population (i.e. "existing need") and would not result in a change in regional population. For further discussion see Connect SoCal Master Response 1 at https://scag.ca.gov/sites/main/files/file-attachments/0903connectsocial_public-participation-appendix-2.pdf?1606001847.

- Job accessibility in 2045 (existing need)

The methodology is described in further detail at <https://scag.ca.gov/sites/main/files/file-attachments/scag-final-rhna-methodology-030520.pdf?1602189316>.

3. Draft RHNA Allocation for the City of Laguna Beach

Following the adoption of the Final RHNA Methodology on March 5, 2020 and the 120 day delay due to the COVID-19 pandemic, SCAG adopted Connect SoCal on September 3, 2020, and the City of Laguna Beach received its draft RHNA allocation on September 11, 2020. Application of the RHNA methodology yields the draft RHNA allocation for the City of Laguna Beach as summarized in the data and calculations in the tables below.

Laguna Beach city statistics and inputs:	
Forecasted household (HH) growth, RHNA period: <i>(2020-2030 Household Growth * 0.825)</i>	17
Percent of households who are renting:	38%
Housing unit loss from demolition (2009-18):	-
Adjusted forecasted household growth, 2020-2045: <i>(Local input growth forecast total adjusted by the difference between the RHNA determination and SCAG's regional 2020-2045 forecast, +4%)</i>	55
Percent of regional jobs accessible in 30 mins (2045): <i>(For the jurisdiction's median TAZ)</i>	6.92%
Jobs accessible from the jurisdiction's median TAZ (2045): <i>(Based on Connect SoCal's 2045 regional forecast of 10.049M jobs)</i>	695,000
Share of region's job accessibility (population weighted):	0.06%
Jurisdiction's HQTAs population (2045):	-
Share of region's HQTAs population (2045):	0.00%
Share of population in low/very low-resource tracts:	0.00%
Share of population in very high-resource tracts:	87.16%
Social equity adjustment:	170%

Calculation of Draft RHNA Allocation for Laguna Beach city	
Forecasted household (HH) growth, RHNA period:	17
Vacancy Adjustment <i>(5% for renter households and 1.5% for owner households)</i>	0
Replacement Need	-
TOTAL PROJECTED NEED:	18
Existing need due to job accessibility (50%)	250
Existing need due to HQTAs pop. share (50%)	0
Net residual factor for existing need <i>(Negative values reflect a cap on lower-resourced community with good job and/or transit access. Positive values represent this amount being redistributed to higher-resourced communities based on their job and/or transit access.)</i>	125
TOTAL EXISTING NEED	375
TOTAL RHNA FOR LAGUNA BEACH CITY	393
Very-low income (<50% of AMI)	117
Low income (50-80% of AMI)	80
Moderate income (80-120% of AMI)	79
Above moderate income (>120% of AMI)	117

The transit accessibility measure is based on the population anticipated to live in High-Quality Transit Areas (HQTAs) in 2045 based on Connect SoCal’s designation of high-quality transit areas and population forecasts. With a forecasted 2045 population of 0 living within HQTAs, the City of Laguna Beach represents none of the SCAG region’s HQTAs population, which is the basis for allocating housing units based on transit accessibility.

Job accessibility is defined as the jurisdiction’s share of regional jobs accessible within a 30-minute drive commute. Since over 80 percent of the region’s workers live and work in different

jurisdictions, the RHNA methodology uses a measure based on Connect SoCal’s travel demand model output for the year 2045 rather than assigning housing units based on the number of jobs with a specific jurisdiction. Specifically, the share of future (2045) regional jobs which can be reached in a 30-minute automobile commute from the local jurisdiction’s median TAZ is used as to allocate housing units based on transit accessibility. From the City of Laguna Beach’s median TAZ, it will be possible to reach 6.92% of the region’s jobs in 2045 within a 30-minute automobile commute (695,000 jobs, based on Connect SoCal’s 2045 regional job forecast of 10,049,000 jobs).

An additional factor is included in the methodology to account for RHNA Objective #5 to Affirmatively Further Fair Housing (AFFH). Several jurisdictions in the region which are considered disadvantaged communities (DACs) on the basis of access to opportunity measures (described further in the RHNA methodology document), but which also score highly in job and transit access, may have their total RHNA allocations capped based on their long-range (2045) household forecast. This additional housing need, referred to as residual, is then reallocated to non-DAC jurisdictions in order to ensure housing units are placed in higher-resourced communities consistent with AFFH principles. This reallocation is based on the job and transit access measures described above, and results in an additional 125 units assigned to the City of Laguna Beach.

Please note that the above represents only a partial description of key data and calculations which result in the draft RHNA allocation.

**SOUTHERN CALIFORNIA ASSOCIATION OF GOVERNMENTS
REGIONAL HOUSING NEEDS ASSESSMENT APPEALS BOARD**

APPEALS DETERMINATION: CITY OF LAGUNA HILLS

Hearing Date: January 19, 2021

The City of Laguna Hills has appealed its draft Regional Housing Needs Assessment (“RHNA”) allocation. The following constitutes the decision of the Southern California Association of Governments’ RHNA Appeals Board regarding the City’s appeal.

I. Statutory Background

The California Legislature developed the RHNA process [Government Code Section 65580 *et seq.* (the “RHNA statute”)] in 1977 to address the serious affordable housing shortage in California. Over the years, the housing element laws, including the RHNA process, have been revised to address the changing housing needs in California. As of the last revision, the Legislature has declared that:

- (a) The availability of housing is of vital statewide importance, and the early attainment of decent housing and a suitable living environment for every Californian, including farmworkers, is a priority of the highest order.
- (b) The early attainment of this goal requires the cooperative participation of government and the private sector in an effort to expand housing opportunities and accommodate the housing needs of Californians of all economic levels.
- (c) The provision of housing affordable to low- and moderate-income households requires the cooperation of all levels of government.
- (d) Local and state governments have a responsibility to use the powers vested in them to facilitate the improvement and development of housing to make adequate provision for the housing needs of all economic segments of the community.
- (e) The Legislature recognizes that in carrying out this responsibility, each local government also has the responsibility to consider economic, environmental, and fiscal factors and community goals set forth in the general plan and to cooperate with other local governments and the state in addressing regional housing needs.
- (f) Designating and maintaining a supply of land and adequate sites suitable, feasible, and available for the development of housing sufficient to meet the locality’s housing need

for all income levels is essential to achieving the state’s housing goals and the purposes of this article. (Cal. Govt. code § 65580).

To carry out the policy goals above, the Legislature also codified the intent of the housing element laws:

- (a) To assure that counties and cities recognize their responsibilities in contributing to the attainment of the state housing goal.
- (b) To assure that counties and cities will prepare and implement housing elements which, along with federal and state programs, will move toward attainment of the state housing goal.
- (c) To recognize that each locality is best capable of determining what efforts are required by it to contribute to the attainment of the state housing goal, provided such a determination is compatible with the state housing goal and regional housing needs.
- (d) To ensure that each local government cooperates with other local governments in order to address regional housing needs. (Govt. Code § 65581).

The housing element laws exist within a larger planning framework which requires each city and county in California to develop and adopt a comprehensive, long-term general plan for the physical development of the jurisdiction (See Govt. Code § 65300). A general plan consists of many planning elements, including an element for housing (See Govt. Code § 65302). In addition to identifying and analyzing the existing and projected housing needs, the housing element must also include a statement of goals, policies, quantified objectives, financial resources, and scheduled programs for the preservation, improvement, and development of housing. Consistent with Section 65583, adequate provision must be made for the existing and projected housing needs of all economic segments of the community.

A. [RHNA Determination by HCD](#)

Pursuant to Section 65584(a), each cycle of the RHNA process begins with the California Department of Housing and Community Development’s (HCD) determination of the existing and projected housing need for each region in the state. HCD’s determination must be based on “population projections produced by the Department of Finance and regional population forecasts used in preparing regional transportation plans, in consultation with each council of governments.” (Govt. Code § 65584.01(a)). The RHNA Determination allocates the regional housing need among four income categories: very low, low, moderate, and above moderate.

Prior to developing the existing and projected housing need for a region, HCD “shall meet and consult with the council of governments regarding the assumptions and methodology to be used by HCD to determine the region’s housing needs,” and “the council of governments shall provide data assumptions from the council’s projections, including, if available, the following data for the region:

- “(A) Anticipated household growth associated with projected population increases.
- (B) Household size data and trends in household size.
- (C) The percentage of households that are overcrowded and the overcrowding rate for a comparable housing market. For purposes of this subparagraph:
 - (i) The term “overcrowded” means more than one resident per room in each room in a dwelling.
 - (ii) The term “overcrowded rate for a comparable housing market” means that the overcrowding rate is no more than the average overcrowding rate in comparable regions throughout the nation, as determined by the council of governments.
- (D) The rate of household formation, or headship rates, based on age, gender, ethnicity, or other established demographic measures.
- (E) The vacancy rates in existing housing stock, and the vacancy rates for healthy housing market functioning and regional mobility, as well as housing replacement needs. For purposes of this subparagraph, the vacancy rate for a healthy rental housing market shall be considered no less than 5 percent.
- (F) Other characteristics of the composition of the projected population.
- (G) The relationship between jobs and housing, including any imbalance between jobs and housing.
- (H) The percentage of households that are cost burdened and the rate of housing cost burden for a healthy housing market. For the purposes of this subparagraph:
 - (i) The term “cost burdened” means the share of very low, low-, moderate-, and above moderate-income households that are paying more than 30 percent of household income on housing costs.
 - (ii) The term “rate of housing cost burden for a healthy housing market” means that the rate of households that are cost burdened is no more than the average rate of households that are cost burdened in comparable regions throughout the nation, as determined by the council of governments.

(I) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the data request.” (Govt. Code § 65584.01(b)(1)).

Legislative changes in 2018 modified the nature of the regional housing need determination for the 6th cycle of RHNA by adding measures of household overcrowding and housing cost burden to the list of factors to be considered by HCD for the determination of housing need. These factors reflect additional latent housing need in the current population (i.e., “existing need”).

HCD may accept or reject the information provided by the council of governments or modify its own assumptions or methodology based on this information. (Govt. Code § 65584.01(b)(2)). After consultation with the council of governments, the department shall make determinations in writing on the assumptions for each of the factors listed above and the methodology it shall use, and HCD shall provide these determinations to the council of governments. (Id.)

After consultation with the council of governments, HCD shall make a determination of the region’s existing and projected housing need which “shall reflect the achievement of a feasible balance between jobs and housing within the region using the regional employment projections in the applicable regional transportation plan.” (Govt. Code § 65584.01(c)(1)). Within 30 days of receiving the final RHNA Determination from HCD, the council of governments may file an objection to the determination with HCD. The objection must be based on HCD’s failure to base its determination on either the population projection for the region established under Section 65584.01(a), or a reasonable application of the methodology and assumptions determined under Section 65584.01(b). (See Govt. Code § 65584.01(c)(2)). Within 45 days of receiving the council of governments objection, HCD must “make a final written determination of the region’s existing and projected housing need that includes an explanation of the information upon which the determination was made.” (Govt. Code § 65584.01(c)(3)).

B. Development of RHNA Methodology

Each council of governments is required to develop a methodology for allocating the regional housing need to local governments within the region. The methodology must further the following objectives:

“(1) Increasing the housing supply and the mix of housing types, tenure, and affordability in all cities and counties within the region in an equitable manner, which shall result in each jurisdiction receiving an allocation of units for low- and very low income households.

(2) Promoting infill development and socioeconomic equity, the protection of environmental and agricultural resources, the encouragement of efficient development patterns, and the achievement of the region’s greenhouse gas reductions targets provided by the State Air Resources Board pursuant to Section 65080.

(3) Promoting an improved intraregional relationship between jobs and housing, including an improved balance between the number of low-wage jobs and the number of housing units affordable to low-wage workers in each jurisdiction.

(4) Allocating a lower proportion of housing need to an income category when a jurisdiction already has a disproportionately high share of households in that income category, as compared to the countywide distribution of households in that category from the most recent American Community Survey.

(5) Affirmatively furthering fair housing.” (Govt. Code § 65584(d)).

To the extent that sufficient data is available, the council of government must also include the following factors in development of the methodology consistent with Section 65884.04(e):

“(1) Each member jurisdiction’s existing and projected jobs and housing relationship. This shall include an estimate based on readily available data on the number of low-wage jobs within the jurisdiction and how many housing units within the jurisdiction are affordable to low-wage workers as well as an estimate based on readily available data, of projected job growth and projected household growth by income level within each member jurisdiction during the planning period.

(2) The opportunities and constraints to development of additional housing in each member jurisdiction, including all of the following:

(A) Lack of capacity for sewer or water service due to federal or state laws, regulations or regulatory actions, or supply and distribution decisions made by a sewer or water service provider other than the local jurisdiction that preclude the jurisdiction from providing necessary infrastructure for additional development during the planning period.

(B) The availability of land suitable for urban development or for conversion to residential use, the availability of underutilized land, and opportunities for infill development and increased residential densities. The council of governments may not limit its consideration of suitable housing sites or land suitable for urban development to existing zoning ordinances and land use restrictions of a locality, but shall consider the potential for increased residential

development under alternative zoning ordinances and land use restrictions. The determination of available land suitable for urban development may exclude lands where the Federal Emergency Management Agency (FEMA) or the Department of Water Resources has determined that the flood management infrastructure designed to protect that land is not adequate to avoid the risk of flooding.

(C) Lands preserved or protected from urban development under existing federal or state programs, or both, designed to protect open space, farmland, environmental habitats, and natural resources on a long-term basis, including land zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(D) County policies to preserve prime agricultural land, as defined pursuant to Section 56064, within an unincorporated area and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of that jurisdiction that prohibits or restricts its conversion to nonagricultural uses.

(3) The distribution of household growth assumed for purposes of a comparable period of regional transportation plans and opportunities to maximize the use of public transportation and existing transportation infrastructure.

(4) Agreements between a county and cities in a county to direct growth toward incorporated areas of the county and land within an unincorporated area zoned or designated for agricultural protection or preservation that is subject to a local ballot measure that was approved by the voters of the jurisdiction that prohibits or restricts conversion to nonagricultural uses.

(5) The loss of units contained in assisted housing developments, as defined in paragraph (9) of subdivision (a) of Section 65583, that changed to non-low-income use through mortgage prepayment, subsidy contract expirations, or termination of use restrictions.

(6) The percentage of existing households at each of the income levels listed in subdivision (e) of Section 65584 that are paying more than 30 percent and more than 50 percent of their income in rent.

(7) The rate of overcrowding.

(8) The housing needs of farmworkers.

(9) The housing needs generated by the presence of a private university or a campus of the California State University or the University of California within any member jurisdiction.

(10) The housing needs of individuals and families experiencing homelessness. If a council of governments has surveyed each of its member jurisdictions pursuant to subdivision (b) on or before January 1, 2020, this paragraph shall apply only to the development of methodologies for the seventh and subsequent revisions of the housing element.

(11) The loss of units during a state of emergency that was declared by the Governor pursuant to the California Emergency Services Act (Chapter 7 (commencing with Section 8550) of Division 1 of Title 2), during the planning period immediately preceding the relevant revision pursuant to Section 65588 that have yet to be rebuilt or replaced at the time of the analysis.

(12) The region's greenhouse gas emissions targets provided by the State Air Resources Board pursuant to Section 65080.

(13) Any other factors adopted by the council of governments, that further the objectives listed in subdivision (d) of Section 65584, provided that the council of governments specifies which of the objectives each additional factor is necessary to further. The council of governments may include additional factors unrelated to furthering the objectives listed in subdivision (d) of Section 65584 so long as the additional factors do not undermine the objectives listed in subdivision (d) of Section 65584 and are applied equally across all household income levels as described in subdivision (f) of Section 65584 and the council of governments makes a finding that the factor is necessary to address significant health and safety conditions." (Govt. Code § 65584.04(e)).

To guide development of the methodology, each council of governments surveys its member jurisdictions to request, at a minimum, information regarding the factors listed above (See Govt. Code § 65584.04(b)). If a survey is not conducted, however, a jurisdiction may submit information related to the factors to the council of governments before the public comment period for the draft methodology begins (See Govt. Code § 65584.04(b)(5)).

Housing element law also explicitly prohibits consideration of the following criteria in determining, or reducing, a jurisdiction's share of the regional housing need:

- (1) Any ordinance, policy, voter-approved measure, or standard of a city or county that directly or indirectly limits the number of residential building permits issued by a city or county.
- (2) Prior underproduction of housing in a city or county from the previous regional housing need allocation, as determined by each jurisdiction's annual production report.
- (3) Stable population numbers in a city or county from the previous regional housing needs cycle. (Govt. Code § 65584.04(g)).

Finally, Section 65584.04(m) requires that the final RHNA Allocation Plan “allocate[s] housing units within the region consistent with the development pattern included in the sustainable communities strategy,” ensures that the total regional housing need by income category is maintained, distributes units for low- and very low income households to each jurisdiction in the region, and furthers the five objectives listed in Section 65584(d). (See Govt. Code § 65584.04(m)).

C. [Public Participation](#)

Section 65584.04(d) provides that “public participation and access shall be required in the development of the methodology and in the process of drafting and adoption of the allocation of the regional housing needs.” The proposed methodology, along with any relevant underlying data and assumptions, an explanation of how the information from the local survey used to develop the methodology, how local planning factors were and incorporated into the methodology, and how the proposed methodology furthers the RHNA objectives in Section 65584(e), must be distributed to the cities, counties, and subregions, and members of the public requesting the information and published on the council of government’s website. (Govt. Code § 65584.04(d) and (f)).

The council of governments is required to open the proposed methodology to public comment and “conduct at least one public hearing to receive oral and written comments on the proposed methodology.” (Govt. Code § 65584.04(d)). Following the conclusion of the public comment period and after making any revisions deemed appropriate by the council of governments as a result of comments received during the public comment period and consultation with the HCD, the council of governments publishes the proposed methodology on its website and submits it, along with the supporting materials, to HCD. (See Govt. Code § 65584.04(h)).

D. [HCD Review of Methodology and Adoption by Council of Governments](#)

HCD has 60 days to review the proposed methodology and report its written findings to the council of governments. The written findings must include a determination by HCD as to “whether the methodology furthers the objectives listed in subdivision (d) of Section 65584.” (Govt. Code § 65584.04(i)). If HCD finds that the proposed methodology is not consistent with the statutory objectives, the council of governments must take one of the following actions: (1) revise the methodology to further the objectives in state law and adopt a final methodology; or (2) adopt the methodology without revisions “and include within its resolution of adoption findings, supported by substantial evidence, as to why the council of governments, or delegate subregion, believes that the methodology furthers the

objectives listed in subdivision (d) of Section 65584 despite the findings of [HCD].” (Govt. Code § 65584.04(i)). Upon adoption of the final methodology, the council of governments “shall provide notice of the adoption of the methodology to the jurisdictions within the region, or delegate subregion, as applicable, and to HCD, and shall publish the adopted allocation methodology, along with its resolution and any adopted written findings, on its internet website.” (Govt. Code § 65584.04(k)).

E. [RHNA Draft Allocation, Appeals, and Adoption of Final RHNA Plan](#)

Based on the adopted methodology, each council of governments shall distribute a draft allocation of regional housing needs to each local government in the region and HCD and shall publish the draft allocation on its website. (See Govt. Code § 65584.05(a)). Upon completion of the appeals process, discussed in more detail below, each council of governments must adopt a final regional housing need allocation plan and submit it to HCD (See Govt. Code § 65584.05(g)). HCD has 30 days to review the final allocation plan and determine if it is consistent with the regional housing need developed pursuant to Section 65584.01. The resolution approving the final housing need allocation plan shall demonstrate that the plan is consistent with the SCS and furthers the objectives listed in Section 65584(d) as discussed above. (See Govt. Code § 65584.04(m)(3)).

F. [The Appeals Process](#)

Within 45 days of following receipt of the draft allocation, a local government or HCD may appeal to the council of governments for a revision of the share of the regional housing need proposed to be allocated to one or more local governments. (See Govt. Code § 65584.05(b)).

“Appeals shall be based upon comparable data available for all affected jurisdictions and accepted planning methodology, and supported by adequate documentation, and shall include a statement as to why the revision is necessary to further the intent of the objectives listed in subdivision (d) of Section 65584. An appeal pursuant to this subdivision shall be consistent with, and not to the detriment of, the development pattern in an applicable sustainable communities strategy developed pursuant to paragraph (2) of subdivision (b) of Section 65080. Appeals shall be limited to any of the following circumstances:

(1) The council of governments or delegate subregion, as applicable, failed to adequately consider the information submitted pursuant to subdivision (b) of Section 65584.04.

(2) The council of governments or delegate subregion, as applicable, failed to determine the share of the regional housing need in accordance with the information described in, and the methodology established pursuant to, Section

65584.04, and in a manner that furthers, and does not undermine, the intent of the objectives listed in subdivision (d) of Section 65584.

(3) A significant and unforeseen change in circumstances has occurred in the local jurisdiction or jurisdictions that merits a revision of the information submitted pursuant to subdivision (b) of Section 65584.04. Appeals on this basis shall only be made by the jurisdiction or jurisdictions where the change in circumstances has occurred.” (Govt. Code § 65584.05(b)).

At the close of the filing period for filing appeals, the council of governments shall notify all other local governments within the region and HCD of all appeals and shall make all materials submitted in support of each appeal available on its website. (See Govt. Code § 65584.05(c)). Local governments and the department may, within 45 days, comment on one or more appeals. (Id.).

No later than 30 days after the close of the comment period, and after providing local governments within the region at least 21 days prior notice, the council of governments “shall conduct one public hearing to consider all appeals filed . . . and all comments received” (Govt. Code § 65584.05(d)). No later than 45 days after the public hearing, the council of governments shall (1) make a final determination that either accepts, rejects, or modifies each appeal for a revised share filed pursuant to Section 65584.05(b); and (2) issue a proposed final allocation plan. (Govt. Code § 65584.05(e)). “The final determination on an appeal may require the council of governments . . . to adjust the share of the regional housing need allocated to one or more local governments that are not the subject of an appeal.” (Id.).

Pursuant to Section 65584.05(f), if the council of governments lowers any jurisdiction’s allocation of housing units as a result of its appeal, and this adjustment totals 7 percent or less of the regional housing need, the council of governments must redistribute those units proportionally to all local governments in the region. (See Govt. Code § 65584.05(f)). In no event shall the total distribution of housing need equal less than the regional housing need as determined by HCD. (Id.).

Within 45 days after issuance of the proposed final allocation plan by the council of governments, the council of governments shall hold a public hearing to adopt a final allocation plan. (Govt. Code § 65584.05(g)). “To the extent that the final allocation plan fully allocates the regional share of statewide housing need . . . and has taken into account all appeals, the council of governments shall have final authority to determine the distribution of the region’s existing and projected housing need.” (Id.) The council of governments shall submit its final allocation plan to HCD within three days of adoption. Within 30 days after HCD’s receipt of the final allocation plan adopted by the council of

governments, HCD “shall determine if the final allocation plan is consistent with the existing and projected housing need for the region,” and it “may revise the determination of the council of governments if necessary to obtain this consistency.” (Id.).

II. Development of the RHNA Process for the Six-County Region Covered by the SCAG Council of Governments (Sixth Cycle)

A. Development of the Draft RHNA Allocation Plan¹

As described in Attachment 1 to the staff reports for each appeal, the Sixth Cycle RHNA began in October 2017, when SCAG staff began surveying each of the region’s jurisdictions on its population, household, and employment projections as part of a collaborative process to develop the Integrated Growth Forecast which would be used for all regional planning efforts including the Regional Transportation Plan/Sustainable Communities Strategy (“RTP/SCS” or “Connect SoCal”).² On or about December 6, 2017, SCAG sent a letter to all jurisdictions requesting input on the Connect SoCal growth forecast. SCAG met one-on-one with all 197 local jurisdictions between November 2017 and July 2018 and provided training opportunities and staff support. Following input from SCAG’s Technical Working Group (TWG), the Connect SoCal growth forecast reflected precisely the jurisdiction-level growth totals provided during this process.

Forecasts for jurisdictions in Orange County were developed through the 2018 Orange County Projections (OCP-2018) update process conducted by the Center for Demographic Research (CDR) at Cal State Fullerton. Jurisdictions were informed of this arrangement by SCAG at the kickoff of the Process.

On March 19, 2019, SCAG distributed a packet of methodology surveys, which included the local planning factor survey (formerly known as the “AB 2158 factor survey”), Affirmatively Furthering Fair Housing (AFFH) survey, and replacement need survey, to SCAG jurisdictions’ Community Development Directors. Surveys were due on April 30, 2019. SCAG reviewed all submitted responses as part of the development of the draft RHNA methodology.

Beginning in October 2018, the RHNA Subcommittee, a subcommittee formed by the Community, Economic and Human Development (“CEHD”) Committee to provide policy guidance in the development of the RHNA Allocation Methodology, held regular monthly meetings to discuss the RHNA

¹ The information discussed in this section has been made publicly available during the RHNA process and may be accessed at the SCAG RHNA website: <https://scag.ca.gov/rhna>.

² Information regarding Connect SoCal is available at: <http://rtpscs.scag.ca.gov/Pages/Regional-Housing-Needs-Assessment.aspx/index.htm>.

process, policies, and methodology, to provide recommended actions to the CEHD Committee. All jurisdictions and interested parties were notified of upcoming meetings to encourage active participation in the process.

On or about June 20, 2019, SCAG submitted a consultation package for the 6th Cycle RHNA to HCD.³ On or about August 22, 2019, SCAG received its RHNA determination from HCD.⁴ HCD determined a minimum regional housing need determination of 1,344,740 total units among four income categories for the SCAG region for 2021-2029.

On or about September 18, 2019, SCAG submitted its objection to HCD's RHNA determination.⁵ SCAG objected primarily on the grounds that (1) HCD did not base its determination on SCAG's Connect SoCal growth forecast; (2) HCD compared household overcrowding and cost-burden rates in the SCAG region to national averages rather than to rates in comparable regions; and (3) HCD used unrealistic comparison points to evaluate healthy market vacancy. SCAG proposed an alternative RHNA determination of 823,808 units.

On or about October 15, 2019, after consideration of SCAG's objection, HCD issued its Final RHNA determination of a minimum of **1,341,827** total units among four income categories.⁶ HCD noted that its methodology

“establishes the minimum number of homes needed to house the region's anticipated growth and brings these housing need indicators more in line with other communities, but does not solve for these housing needs. Further, RHNA is ultimately a requirement that the region zone sufficiently in order for these homes to have a potential to be built, but it is not a requirement or guarantee that these homes will be built. In this sense, the RHNA assigned by HCD is already a product of moderation and compromise; a minimum, not a maximum amount of planning needed for the SCAG region.”

Meanwhile, the RHNA Subcommittee began to develop the proposed RHNA Methodology that would be further developed into the Draft RHNA Methodology. On July 22, 2019, the RHNA Subcommittee recommended the release of the proposed RHNA Allocation Methodology to the CEHD Committee. The CEHD Committee reviewed, discussed, and further recommended the proposed

methodology to the Regional Council, which approved to release the proposed methodology for distribution on August 1, 2019. During the 30-day public comment period, SCAG met with interested jurisdictions and stakeholders to present the process, answer questions, and collect input. This included four public hearings to collect verbal and written comments held on August 15, 20, 22, and 27, 2019 and a public information session held on August 29, 2019.

On September 25, 2019, SCAG staff held a public workshop on a Draft RHNA Methodology that was developed as a result of the comments received on the proposed RHNA Methodology. On October 7, 2019, the RHNA Subcommittee voted to recommend the Draft RHNA Methodology, though a substitute motion that changed certain aspects of the Methodology as proposed by a RHNA Subcommittee member failed. On October 21, 2019, the CEHD Committee voted to further recommend the Draft RHNA Methodology recommended by the RHNA Subcommittee.

SCAG staff received several requests from SCAG Regional Councilmembers and Policy Committee members in late October and early November 2021 to consider and review an alternative RHNA Methodology that was based on the one proposed through a substitute motion at the October 7, 2019 RHNA Subcommittee meeting. The staff report of the recommended Draft Methodology and an analysis of the alternative Methodology were posted online on November 2, 2019. Both the recommended and alternative methodologies were presented by SCAG staff at the Regional Council on November 7, 2019. Following extensive debate and public comment, SCAG's Regional Council voted to approve the alternative methodology as the Draft RHNA Methodology and provide it to HCD for review.

On January 13, 2020, HCD found that the Draft RHNA Methodology furthers the five statutory objectives of RHNA.⁷ On March 5, 2020, again following extensive debate and public comment, the Regional Council voted to approve the Draft RHNA Methodology as the Final RHNA Methodology.⁸
